Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 48 Civil Engineer Squadron

Work Center: 48 CES/CSS

Office Symbol: 48 CES/CSS

Supervisor: MSgt Jimenez, Kenneth

Phone: 314-226-1901

Reviewer: MSgt Jimenez, Kenneth

Review Date: 2026-05-20

Effective Date: 2026-05-20

WORK CENTER OVERVIEW

The CSS (Commander Support Staff) and the Command Team (Commander, Chief Deputy & Shirt) are located within Building 1156 and the UTM (Unit Training Manager), USR (Unit Safety Representative) & VCO (Vehicle Control Officer) are in Building 1146. All three sections work within an 'Admin Building' but fall under the same section for this JSTO.

REQUIRED TRAINING TOPICS

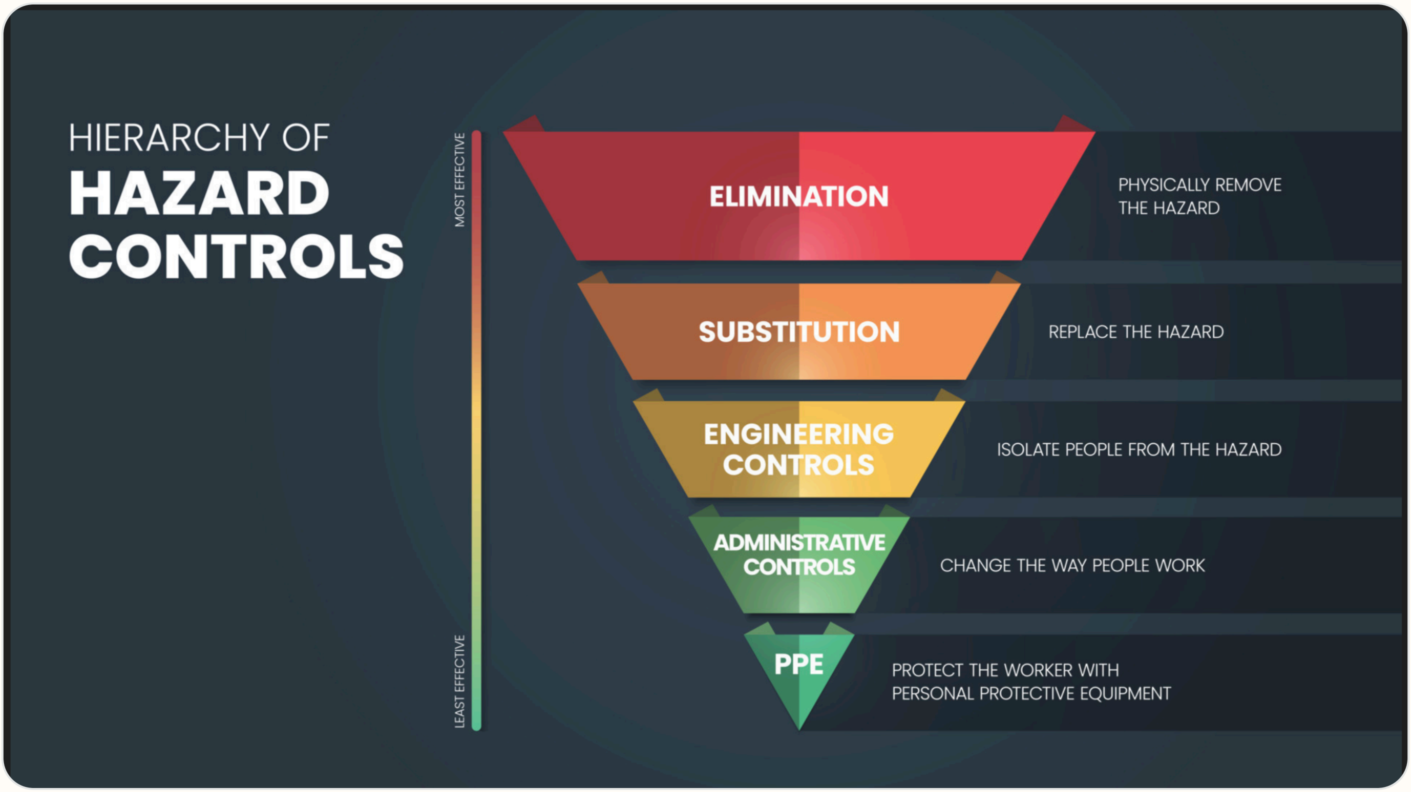
Workplace Hazards | Personal Protective Equipment | Emergency Action and Fire Prevention | Reporting Unsafe Conditions | Reporting Mishaps and Occupational Injury/Illness | CA-10 and LS-201 | DAF Traffic Safety Program | DAFVA 91-209 | DAFSMS Responsibilities

- **Hazards and controls:** Address task hazards, environmental hazards, governing instructions, and hierarchy of controls including elimination, engineering, substitution, and administrative controls.
- **PPE:** Cover required protective equipment, wear/use procedures, cleaning, maintenance, storage, disposal, and supervisor notification concerns.
- **Emergency response:** Cover emergency action, fire prevention, alarms, AEDs, extinguishers, evacuation, shelter, active shooter response, and emergency contact procedures.
- **Reporting:** Explain unsafe condition reporting, injury/illness reporting, DAF Form 457, SAFEREP access, and anti-retaliation protections.

- **Program awareness:** Include CA-10 / LS-201 location, traffic safety program requirements, DAFVA 91-209 location, and DAFSMS responsibilities.

Hierarchy of Controls

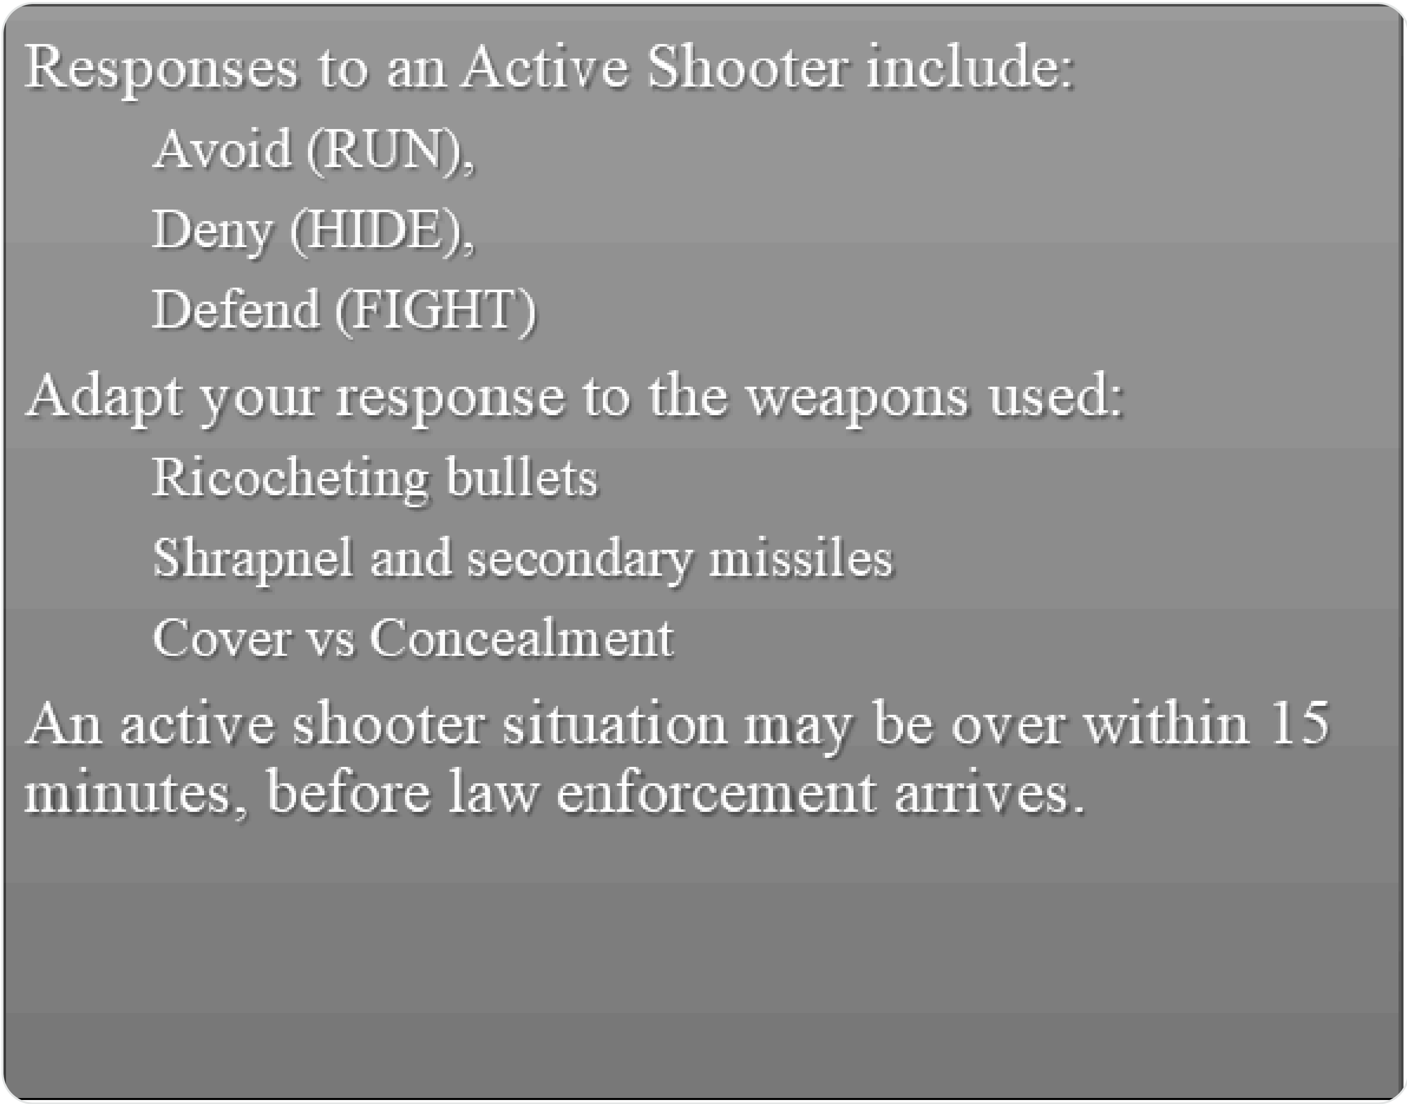
Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.



Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.



Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively and take action against the shooter. Improvise weapons from your surroundings and commit to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS FRAMEWORK

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Provides the structure for a proactive mishap prevention program through policy, active leadership engagement, and clearly defined responsibilities at every level.

Risk Management

Integrates hazard identification, assessment, and control decisions into daily operations to reduce mishaps and strengthen safety culture.

Assurance

Uses evaluations, monitoring, reviews, and data to confirm the mishap prevention program is implemented and improving over time.

Promotion, Education, and Training

Ensures Airmen and Guardians receive safety awareness information, embedded training, effective risk controls, and active engagement in mishap prevention.

1. Purpose. DAFSMS utilizes the four pillars and the DAFSMS framework to structure the mishap prevention program. Activities associated with each pillar set policy, identify and mitigate hazards and risk, and reduce the occurrence and cost of injuries, illnesses, fatalities, and property damage through continuous improvement and the PDCA model.

2. Policy and Leadership. Safety policy provides the structure for a sound and proactive mishap prevention program. Active leadership involvement in implementation and execution is critical at all levels of command.

3. Risk Management. Ensure the RM process is fully integrated into all safety-related activities to enhance mishap prevention and sustain a proactive safety culture. Refer to DAFI 90-802 and DAFPAM 90-803 for additional detail.

4. Assurance. Safety assurance is how commanders determine whether mishap prevention elements are implemented and guides continuous improvement through evaluation, monitoring, and review.

5. Promotion, Education, and Training. Ensure Airmen and Guardians are provided safety awareness information, organizations have embedded ongoing training into the mishap prevention program, effective risk controls are implemented, and personnel remain actively engaged.

SAFEREP

Report it on
SAFEREP
HAZARDS ARE EVERYWHERE.
SAFEREP
WHAT ARE YOU DOING TO
PREVENT INJURY OR DEATH?
More info about SAFEREP
www.safety.af.mil/home/saferep

SAFEREP is the Department of the Air Force's (DAF) premiere digital safety reporting tool and mobile app. It allows Airmen and Guardians to easily report hazardous conditions, near-misses, unintentional errors, or safety concerns across all disciplines, including workplace, traffic, industrial, flight, weapons, and space safety, directly from their devices anytime and anywhere.

Fully integrated with the Air Force Safety Automated System (AFSAS), it replaces the earlier Airman Safety App and serves as the DAF's only fully digital safety reporting avenue. Users simply answer a short series of questions to submit reports that reach the appropriate Major Command (MAJCOM) safety office quickly and efficiently.

Key Benefits for Job Safety Training:

- **Empowers everyone:** Turns every Airman or Guardian into a proactive sensor for hazard identification, encouraging a strong safety culture where people feel comfortable speaking up without barriers like paperwork or word-of-mouth delays.
- **Prevents mishaps:** Enables early mitigation of risks before they lead to incidents, capturing minor events and near-misses that offer the greatest prevention potential.
- **Simple and accessible:** Mobile-first design makes reporting fast, more efficient than traditional methods, and available on the spot through the app on Google Play and the Apple App Store.
- **Broad coverage and integration:** Supports multiple safety areas and includes specialized features such as Aviation Safety Action Program reporting, improving visibility, tracking, and overall risk management across the force.

This tool strengthens operational readiness by fostering a proactive, data-driven approach to safety. You can download it from the app stores or access it through the official SAFEREP site for more details.

SAFEREP portal: https://saferep.safety.af.mil

REPORTING UNSAFE EQUIPMENT, CONDITIONS, OR PROCEDURES

Employees must report unsafe equipment, conditions, or procedures to their supervisor immediately. This includes any hazard that could injure personnel, damage equipment, or create an unsafe work process.

Personnel must also be notified that unsafe conditions, work-related injuries, and illnesses may be reported **without fear of retaliation**. Immediate supervisor involvement remains the primary reporting path, with SAFEREP and formal hazard-report channels available when needed.

What To Report

- Unsafe equipment that is broken, damaged, unserviceable, or missing required guards or controls.
- Unsafe conditions or procedures that create a hazard to personnel, operations, or facilities.
- Work-related injuries, illnesses, near-misses, and hazards needing immediate attention.

Immediate Actions

- Notify the supervisor or responsible area lead immediately.
- If the hazard can be safely controlled, stop use and isolate the equipment or area until corrected.
- If the danger is imminent to life or health, evacuate the area and activate emergency response procedures.

Tag use examples: Use the appropriate danger, caution, out-of-order, or do-not-start tag to keep unsafe equipment out of service until the hazard has been corrected and the responsible supervisor authorizes return to use.

Escalation: If the issue cannot be resolved at the lowest level, elevate it through the unit safety representative, DAF Form 457 process, or SAFEREP as appropriate.

LOCAL MISHAP / HAZARD REPORTING PROCEDURES

No local mishap or hazard reporting procedures uploaded.

USE OF PORTABLE FIRE EXTINGUISHERS

Portable fire extinguishers are intended for small, incipient-stage fires only. Personnel should use an extinguisher only when they have been trained, the fire is small and contained, the correct extinguisher is available, and there is a clear evacuation path behind them.

Use the **PASS** method when operating a portable fire extinguisher: **Pull** the pin, **Aim** at the base of the fire, **Squeeze** the handle, and **Sweep** side to side.

If the fire grows, smoke conditions worsen, or the extinguisher does not control the fire immediately, evacuate the area, activate the local emergency response process, and report the incident to emergency services and supervision.

WORK AREA HAZARD ANALYSIS

OFFICE HAZARD
To reduce the potential for storage and housekeeping related injuries, each office member is responsible to police their area. Trash will be taken out on a routine basis and storage will be orderly and well kept. All stored items will be kept 18" clear of sprinkler heads. Work center furniture will be positioned to allow free and open movement. Filing cabinets will not be top loaded with heavy items leaving the bottom drawers empty (tip hazard). Filing cabinet drawers will not be left open and unattended. All phone, computer, and electrical cords will be positioned as to not cause a tripping or obstruction hazard. At the end of the day the last person out of your office will check to ensure that items are turned off and no condition exists that could cause damage if left unattended.

OFFICE ERGONOMICS
Workstation design should be tailored to provide you good lighting, sitting position, elbows at 90' and keyboard height. These features provide you with less stress when working at computer workstations. If you are experiencing any symptoms (neck pain, eye strain, back pain, etc.) from your workstation, contact your immediate supervisor and/or military public health for assistance. Repetitive tasks such as typing may create physical problems in some individuals. To avoid such problems, alternate your tasks to prevent the over-exertion of a particular body part or series of parts. Your job provides you the latitude to alternate tasks without hindering mission effectiveness. Schedule your daily tasks with this in mind.

ELECTRICAL OFFICE
Computer equipment and other electrically operated equipment are used in the office environment. Ensure all electrically operated equipment that was manufactured with a ground prong (3 prong) has a ground prong and that all prongs are securely attached. When plugging in and unplugging electrical equipment, grasp the base of the cord, at the plug, and firmly pull. Do not unplug by pulling on the cord. Frequently inspect cords for damage. If you feel a shock or tingling sensation when you touch a piece of equipment, turn it off at the power strip or circuit breaker (if possible) and report it to your supervisor. Extension cords may not be used in lieu of permanent wiring; this presents a fire hazard/trip hazard All offices utilize both 220 and 110 voltage appliances. Ensure that you plug in the right plug to the right voltage. Severe equipment damage could occur if plugging a 110- volt appliance into a 220-volt outlet.

OFFICE FURNITURE
Desks, tables and many other pieces of office furniture have sharp corners, which can cause injury. Use caution particularly when walking around desks. Open drawers in filing cabinets and desks, one at a time. Close them when you are finished. If you are tasked with moving office furniture, use mechanical materials handling equipment whenever possible. The workbench area can create many potential hazards depending on the work being done. Pay attention to your surroundings and be aware of potentially hazardous situations.

HEAT/COLD STRESS
Take frequent breaks and drink plenty of fluids (preferably water, not soda) when participating in extended activities in high temperatures and/or humidity. You may be suffering from heat stroke or exhaustion if you have any or all of these symptoms: dizziness, nausea, headache, mental confusion, you stop sweating or your skin is clammy or moist. If you have these or have any other abnormal indication, go indoors, rest, and seek assistance if necessary. During the colder weather, ensure that you have warm layers of clothing. You may be tasked to respond to an exercise, disaster control group, or a mishap that involves extended outdoor activities. Dress appropriately.

RISK MANAGEMENT FUNDAMENTALS

Reference: DAFSMS and local RM program guidance.

Address hazard identification, control selection, local escalation expectations, and when RM refresher training must be completed for this work center.

Risk management (RM) is a logic based common sense approach to making calculated decisions on human, material and environmental factors before, during and after AF operations. Think of risk in the terms of a speedometer to illustrate the impact that risk has on the mission. The higher the speed, the further you go in a shorter amount of time, but the chance of something going wrong will increase the magnitude of damage/injury. The key to managing risk is to arrive at a state where risk and the mission mesh or, said another way, where the risk being accepted meets mission requirements.

Decision makers continually strive for “successful mission accomplishment.” This is ONLY achieved by lending definition and proportion to risk. The worker/employee needs to understand that the commander, functional manager or the supervisor will make decisions based on ALL available information. Without defining risk, such decisions are a gamble. The worker/employee must inform the decision maker(s) when there is an increased level of risk without appropriate control measures. Risk Management is a process that identifies and prioritizes risk in the Air Force workplace. It allows decision makers to possess all the facts that will assist them in determining the right balance of risk against mission objectives.

RM is a continuous, sequential methodology consisting of a defined process depending on mission requirements. The following is the 5-step process:

1. IDENTIFY HAZARDS
2. ASSESS HAZARDS
3. MAKE CONTROL DECISIONS
4. IMPLEMENT CONTROLS
5. SUPERVISE AND REVIEW

Accept No Unnecessary Risk: If not all the hazards are identified, then too much risk may be accepted. Make Decisions at the Appropriate Level: Those accountable for the success or failure of the mission must be included in the risk-decision process. This establishes clear accountability. Commanders must ensure subordinates know how much risk they may accept and when they must elevate the decision to a higher level.

Integrate RM into Air Force Doctrine And Planning At All Levels: Integrating risk management into planning as early as possible provides the decision-maker the greatest opportunity to apply ORM principles. Usually, it reduces costs and enhances ORM's overall effectiveness too.

Apply the process cyclically and continuously: RM is a continuous process allied across the full spectrum of military operations, training and day-to-day activities both on and off-duty. We must continually apply the RM process to assess hazards, develop and implement controls and provide feedback to our Airmen to save lives and preserve combat resources.

Points to Remember:
• Risk is acceptable when it has been defined and managed.
• Risk is necessary in a changing, reactive environment.
• Safety vital to the mission.

JOB SPECIFIC TRAINING ITEMS

No job-specific modules selected yet.

  Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

DAF TRAFFIC SAFETY PROGRAM

Reference: DAFI 91-207. Requirements of the DAF traffic safety program include mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, and vehicle training requirements.
Additionally, brief prohibition or restrictions on electronic-device use while operating vehicles on- or off-base, and discuss motorcycle safety training requirements before riding a motorcycle.

On-Base / Vehicle Operations

- Obey posted speed limits, traffic control devices, and local roadway rules.
- Use installed seat belts and occupant restraints as designed by the manufacturer.
- Use spotters while backing when required by local policy, task conditions, or vehicle type.
- Complete required GOV, GVO, golf cart, low-speed vehicle, or mission-specific vehicle training before operation.

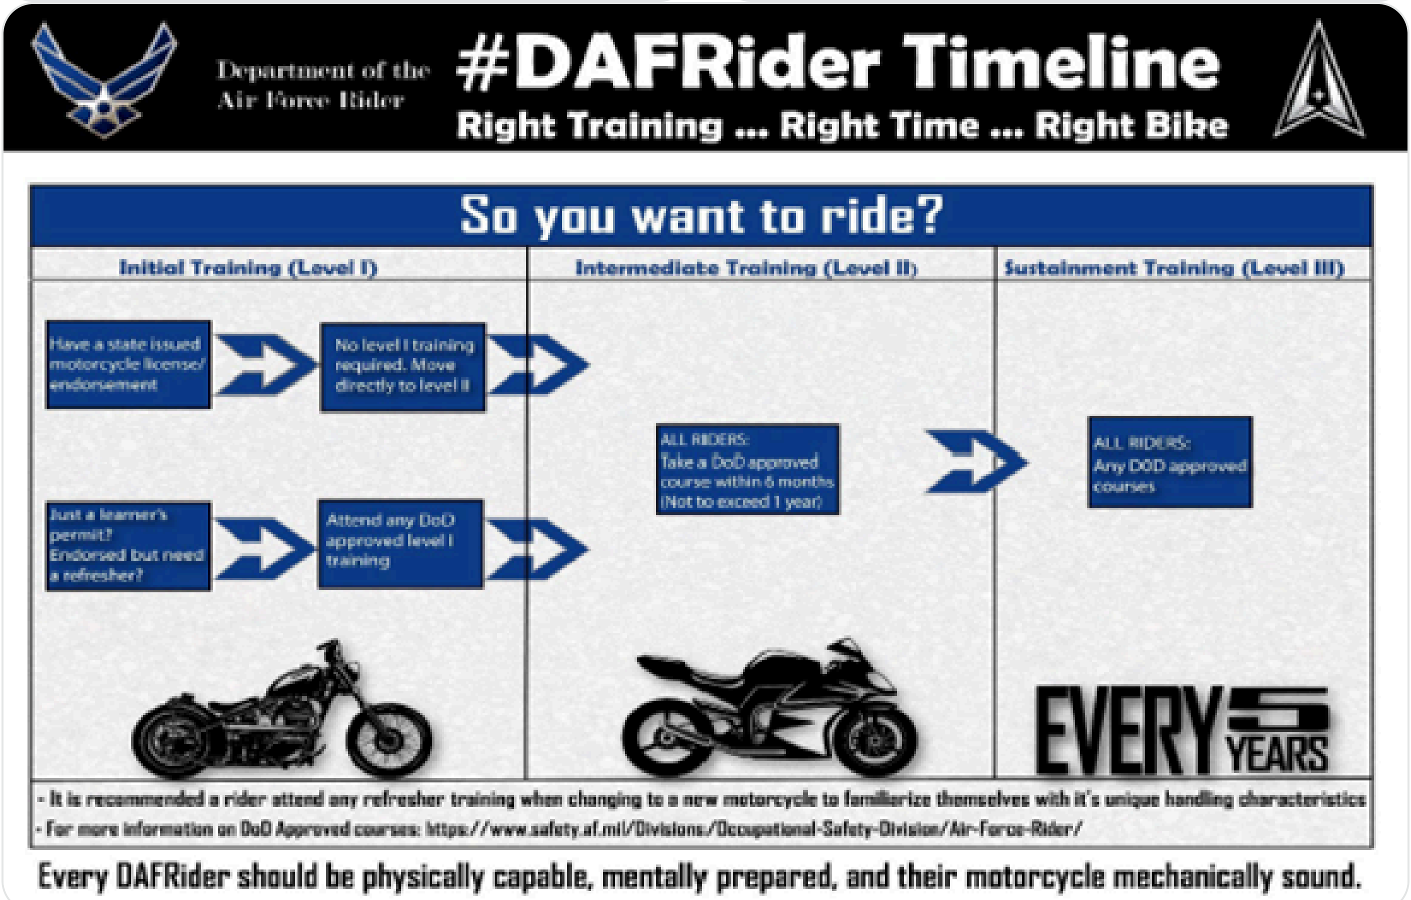
Electronic Devices / Headphones

- Do not use non-hands-free electronic devices while operating a motor vehicle.
- Stop in a safe location before using a phone if hands-free operation is not available.
- Do not wear headphones or listening devices in ways that interfere with hearing traffic, alarms, or emergency warnings.

Motorcycle / ATV Safety

Pedestrian / Bicycle Awareness

- Complete required motorcycle rider training before riding on a roadway.
- Wear required PPE including helmet, eye protection, gloves, protective clothing, and over-the-ankle footwear.
- Carry proof of required training when applicable and comply with state licensing requirements.
- Use caution at crossings, follow traffic controls, and wear visibility gear when exposed to roadway hazards.
- Use required lighting and reflective equipment during darkness, reduced visibility, or inclement weather.



Local Traffic Hazards / Vehicle Notes:
Licensing: All personnel who operate a private motor vehicle or a government motor vehicle will maintain current a 3AF Form 435, 3AF Driving/Fuel Permit United Kingdom.
The 3AF Form 435 will have a motorcycle endorsement annotated on it for motorcycle rides. Motorcycle riders will also have completed an MSF course within five years to operate in the USAFE. Motorcycle riders will in process the squadron Motorcycle Safety Representative prior to riding in the United Kingdom.

Motorcycle: All riders will see the Unit Motorcycle Representative prior to riding any PMV-2. Members will be registered in MUSTT and complete appropriate safety rider course. Motorcycle riders will also comply with any and all requirements in relevant AFI/Local Supplements.

General Driving Requirements: Refer to the Highway Code for further information and guidance. You will have covered driving in the UK during your Base In-Processing. The following is just a reminder of some of the most important items: More information can be found at: http://www.direct.gov.uk/en/TravelAndTransport/Highwaycode/index.htm

Seatbelts: Seatbelts are mandatory for all occupants in a vehicle both on and off base.

Conditions: Always drive to the prevailing road and weather conditions. These are changeable as the weather affects the road conditions.

Use of Headlights: During times of inclement weather and reduced visibility, 30 Minutes after dawn and 30 minutes before dusk headlights should be used. This is to improve your visibility to other vehicles during these times.

Roadworthiness: Ensure that your vehicle is in a state of roadworthiness at all times. Check that all running lights are working (side, head, indicator, brake, reversing, fog) prior to commencing any journey. If observed by Police Officers, this could result in a fine and penalty points. Check tires have sufficient tread; wipers are free from defects and that mirrors are clean and serviceable.

Speed Limits: Off Base speed limits are assigned by the type of road and not the hazards associated with the road. These are maximum speed limits, not mandatories. The safe speed to drive on UK Roads is the posted speed limit adjusted to the Road and Weather conditions. This is deemed to be 10-15 mph, in normal conditions, below the posted limit. Any slower and you would become the hazard. In the Urban environment the speed limit is usually 30 mph. This is shown by the presence of the sign or street lamps and houses. Where there is an infant school or area highly populated with young children the speed limit is reduced to 20 mph.

Passing: The Base operates a no-passing policy within 10 miles of Base. The map and exceptions can be viewed on the Safety Bulletin Board.

Cell Phone Use: Hand held mobile device use whilst driving is prohibited in the UK. The current penalty is 6 points and £200 minimum. It is also prohibited in any GMV. Your 3rd AF License can be removed if you are observed using your cell phone when driving on and off base. Bluetooth is permitted in cars, but you can still be prosecuted for distracted driving even with Bluetooth if you commit acts contrary to Rule 144 of the UK Highway Code.

On-Base Traffic: The speed limit on base varies between 10-30 mph. The speed limit in parking lots, dormitory areas and while approaching the gates is 5 mph. Obey all posted speed limits and traffic/road signs.

Operator Fatigue: To reduce the potential for traffic mishaps caused by operator fatigue, personnel are encouraged to apply personal risk management when trip planning on- and off-duty. Periodic breaks should be taken to reduce fatigue and stress. A 14-hour duty day, including driving and all other duties, is the recommended maximum allowed unless under exceptional conditions.

Motorcycle Safety Representatives / Traffic Contacts:
List unit or group motorcycle safety representatives, traffic safety contacts, and local rider briefing requirements.

No GVO risk assessment files uploaded.

EMERGENCY INFORMATION

- **Emergency Numbers:**
  Not entered
- **Medical Facility / Treatment:**
  Not entered
- **Evacuation / Muster Point:**
  In Case of a Fire - Think "SPEED"
  Sound the alarm or yell "FIRE FIRE FIRE"

Phone the Fire Department
Evacuate the building and meet up in the parking lot of building 1156
Extinguish the fire if possible
Direct firefighters to the fire

- **Shelter in Place:**
  The Shelter in Place (SIP) location is the Resources Office. Report any suspicious activity, which was seen in route, to Military police.
- **Active Shooter Response Methods:**
  In case of active shooter; seek shelter immediately. Lock all windows and doors. Then retreat to a safe location away from all window and doors.
- **Adverse Weather Shelter:**
  Not entered

No evacuation route image uploaded.

EMERGENCY EQUIPMENT AND SAFETY BOARD

Safety Bulletin Board Location: Bldg 1156 - Main Corridoor

List fire pull stations, extinguishers, power cutoffs, eyewash stations, AEDs, foam systems, and any local fire/emergency equipment notes.

No emergency equipment maps or photos uploaded.

DOCUMENTATION AND REVIEW

Document initial, refresher, and task-specific training in the work center record, review annually or when work conditions change, and maintain records per local records management requirements.

No DAF Form 1118 files uploaded.

No Bioenvironmental Workplace Survey uploaded.

Annual Review History:
Each annual review entry is shown in the table below.
