

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 321st Contingency Response Squadron

Work Center: Training Flight

Work Area / Office Symbol: DOX/BLDG 1907/Rm 401

Phone: 609-754-0898

Supervisor: (M)Sgt Andrew Pirolì

Reviewer: TSgt Joshua Butler

Review Date: 2026-09-03

Effective Date: 2026-09-07

Work Center Overview

Building 1907, 4th Floor, Room number 401.

The training flight is responsible for overseeing formal, ancillary, & AFSC-specific training for squadron personnel. They provide high-level coordination, expertise, and trust to ensure all personnel meet readiness standards for TRANSCOM Alert cycles. The flight tracks and schedules all training to maintain critical mission capability and manages cross-functional training plans, consolidates AFSC requirements, and delivers tailored readiness reporting to Wing leadership.

Work Area Hazard Analysis / JHA Notes

No major workplace hazards exist in this area. Ensure personnel are aligning with proper workstation ergonomics and posture and taking adequate breaks to rest eyes and move bodies.

Required Training Topics

Workplace Hazards Personal Protective Equipment Emergency Action and Fire Prevention Reporting Unsafe Equipment, Conditions, or Procedures Mishap, Occupational Injury, and Illness Reporting CA-10 and LS-201 DAF Traffic Safety Program DAFVA 91-209 Location and Content DAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control
- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

The following modules apply to this work center and should be reviewed with trainees before task performance.

Hearing Conservation Forklift / Material Handling Equipment CPR Training Flight Line Driving Manual Lifting and Material Handling Fire Protection and Prevention Bloodborne Pathogens

- **Hearing Conservation:** Members may be required to complete an annual audiogram, coordinated with Occupational Health at the 87th Medical Group clinic. Contact the appointment line to schedule: (866) 377-2778, option 1,2,5,2 or email the org box at dha.jbmdl.mcguire-87th-mdg.mbx.87-omrs-occ-health@health.mil
- **Forklift / Material Handling Equipment:** Members may be required to complete forklift competency training in line with their AFSC or mission requirements. All training should be coordinated with Port Flight.
- **CPR Training:** Training is required for established mission-ready requirements. SrA Richard Ramos in the CSS is the primary POC for this training and all certifications are maintained by the

CPR program and Training Flight.

- **Flight Line Driving:** Members may be required to complete flightline driving competency training in line with their AFSC or mission requirements. All training should be coordinated with SSgt Roger Lattimore and certification is tracked by the Training Flight.
- **Manual Lifting and Material Handling:** Manual lifting will be required during cargo preparation, exercise, and field conditions. Utilize proper lifting form and implement two-person or MHE lifts when appropriate.
- **Fire Protection and Prevention:** Facility Managers and Supervisors must establish and maintain a fire prevention training program through the JSTO so employees understand their fire prevention and protection responsibilities in the work area. This is fulfilled through job safety training and documentation under DAFI 91-202. Review the prevention plan with employee when the plan is developed, when responsibilities change, and when the plan changes. If extinguishers are provided for employee use, train employees on the general principles of extinguisher use and the hazards of incipient-stage firefighting at initial assignment and at least annually. Train designated users on the specific equipment they are expected to use.
- **Bloodborne Pathogens:** Members may be exposed to fluids during routine and austere operations. Members should follow proper PPE guidance and reporting actions.

Emergency Information

- **Emergency Numbers:** Command Post: 609-754-3935
JB MDL Base Defense Operations Center: 609-562-6001
Emergency: 911
Mental Health Emergency: 988
- **Medical Facility / Treatment:** - JB MDL Clinic/87th Medical Group is open 0730-1600 during duty days
 - Same Day Acute Care is open 0800-1500
 - Appointment Line: (866) 377-2778
 - JBMDL does NOT have emergency room, call 911 for emergencies and 988 for mental health emergencies.
 - For urgent concerns outside of duty hours, contact the Nurse Advice Line at 1-800-TRICARE

- **Evacuation / Muster Point:** The primary evacuation route will be the staircase closest to the elevator(s) and the alternate evacuation routes will be the other 2 stair cases (1 located by the Transition Section and the other by the DOM flight). The assembly location will be at the smoke pit/dumpster location outside of BLDG 1907.
- **Shelter in Place:** - DO Shop in Room 450, kit located in Room 453.
- The Rook/Conference Room in Room 414.
- **Active Shooter Response Methods:** Fight, Flight, Barricade. Ensure that windows are covered and doors are barricaded, silence any devices and monitor base emergency notifications systems.
- **Adverse Weather Shelter:** Shelter in Place rooms unless otherwise directed.

No evacuation route image uploaded.

Emergency Equipment and Safety Board

Safety Bulletin Board Location: Main Foyer Hallways outside of the Command Section by the freight and passenger elevators

Closest fire extinguisher locations are:

- To the left of the flight entrance, down the hall by the restroom
- To the right of the flight entrance, in the Group Leadership hallway
- There are 7 total extinguishers across the 4th floor

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:

Base speed limit is 25 MPH unless otherwise posted.

Be mindful of deer and other wildlife on the installation and ranges

Road conditions advisories can be found on the JB MDL Facebook page or the JB MDL app

- Green: Roads are clear and dry. Use normal operating procedures.
- Yellow: Roads may be wet and/or slippery. Exercise caution and reduce speeds to 5 MPH below the posted speed limit.
- Red: Road conditions are hazardous. Use extreme caution and reduce speeds to 15 MPH throughout the base and 5 MPH in housing and parking lots.
- Black: Roads are extremely hazardous. Only mission essential and required personnel repowering for duty are authorized to drive on base - use extreme caution!

Motorcycle Safety Representatives / Traffic Contacts:

321 CRS Motorcycle Safety Reps:

SSgt Roy Blackmon

SSgt Dan Drake

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

Safety Reporting ... All In One Place

SAFEREP APP!

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- “Near miss” events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.
