Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 436 CES

Work Center: WFSM Shop

Work Area / Office Symbol: CEOIU

Phone: 677-4786

Supervisor: Donovan Janus, CIV, Foreman

Reviewer: SSgt Michael Kelley

Review Date: 2026-11-10

Effective Date: 2026-11-10

Work Center Overview

Installs, inspects, maintains, troubleshoots, modifies, repairs, and manages plumbing, water distribution, wastewater collection systems, water and wastewater treatment systems, fire suppression, backflow prevention systems, natural gas distribution systems; (3E4X1A Fuel Systems Maintenance) liquid fuel storage, distribution, and dispensing systems. Complies with environmental and safety regulations.

Work Area Hazard Analysis / JHA Notes

Summarize JHA findings, BE survey notes, major hazards, controls, and special restrictions for this work center.

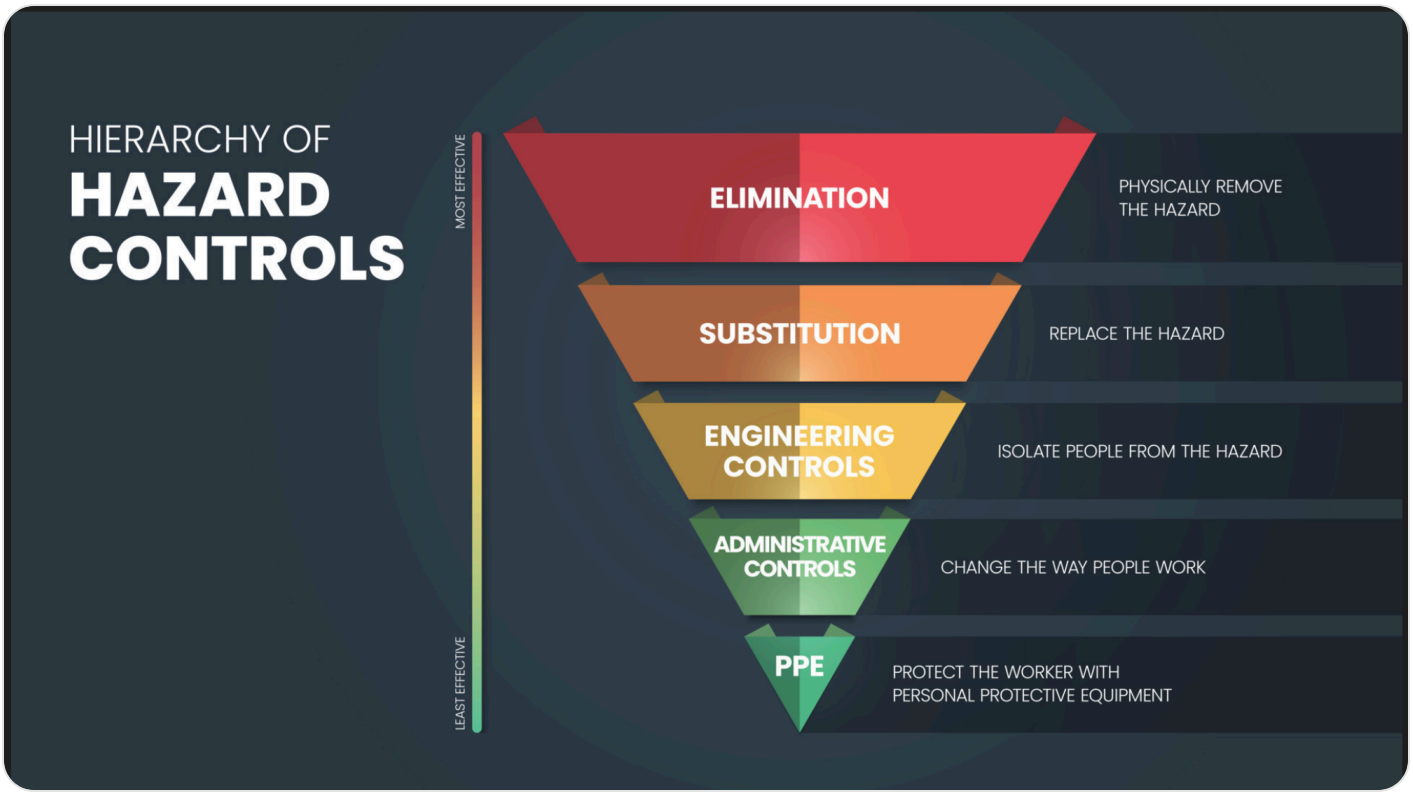

Required Training Topics

Workplace HazardsPersonal Protective EquipmentEmergency Action and Fire PreventionReporting Unsafe Equipment, Conditions, or ProceduresMishap, Occupational Injury, and Illness ReportingCA-10 and LS-201DAF Traffic Safety ProgramDAFVA 91-209 Location and ContentDAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

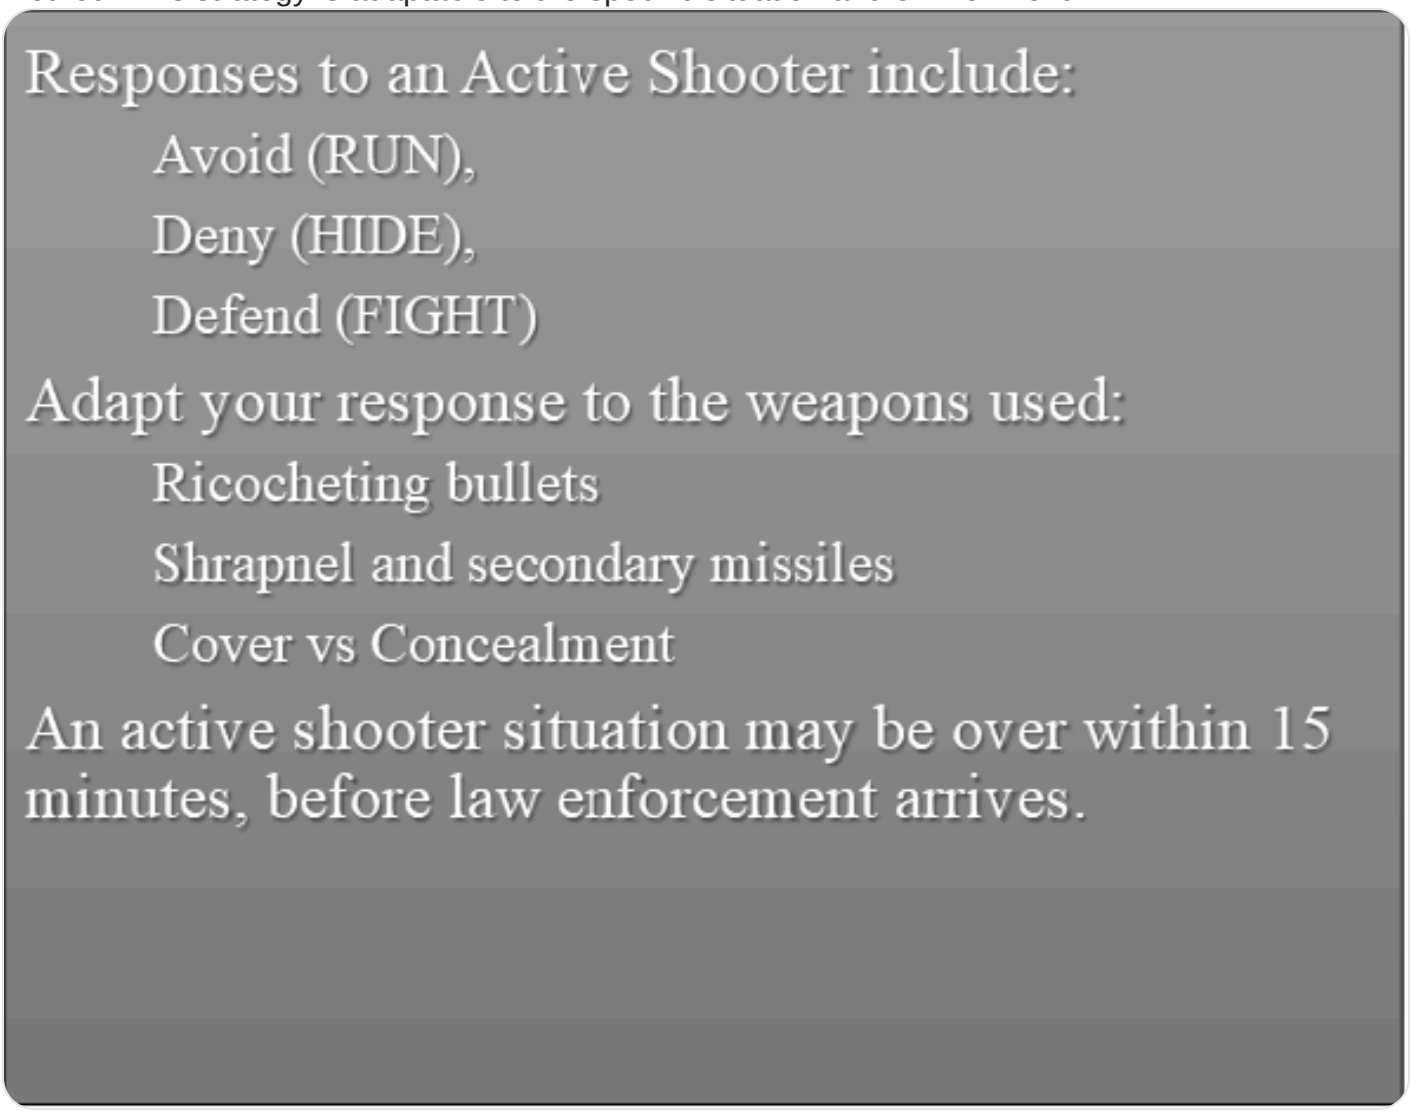

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

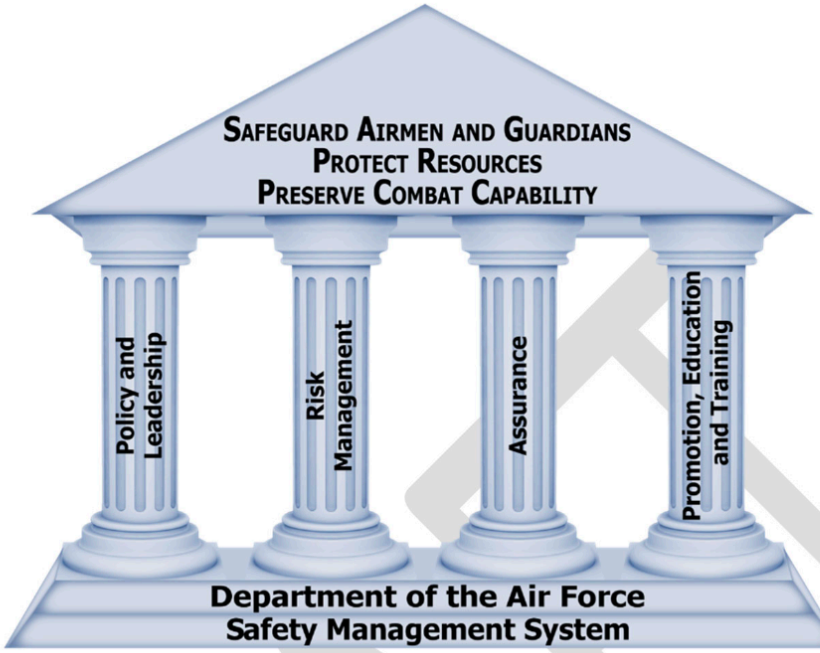

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control
- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

The following modules apply to this work center and should be reviewed with trainees before task performance.

Hazardous Energy ControlConfined Space ProgramRespiratory Protection ProgramFall Arrest Systems

- **Hazardous Energy Control:** Document initial and refresher training when job assignments, machines, processes, or energy control procedures change, or when inspections show employee knowledge gaps. Train authorized employees to recognize hazardous energy sources, the type and magnitude of energy present, and the methods and means for isolation and control. Train affected employees on the purpose and use of lockout/tagout procedures, and instruct all other employees on the prohibition against restarting locked or tagged equipment. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 21; 29 CFR 1910.147 - The control of hazardous energy (lockout/tagout)
- **Confined Space Program:** Provide duty-specific training for permit-required confined space roles, including monitor use, atmospheric hazards, entry permits, and rescue responsibilities before

personnel participate in entries. Train entrants, attendants, supervisors, and rescue personnel so they understand their duties, hazards, signs and symptoms of exposure, communication procedures, and emergency actions before assignment. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 23; 29 CFR 1910.146 - Permit-required confined spaces
- **Respiratory Protection Program:** Document fit testing and occupational health training on AF Form 2767 and ensure wearers understand emergency-use limits, cartridge change-out, cleaning, and medical qualification requirements. Train users before respirator use and at least annually on why the respirator is necessary, how improper fit or maintenance can compromise protection, and how to inspect, don, doff, use, and store the respirator. DAFI 48-137; 29 CFR 1910.134 - Respiratory protection
- **Fall Arrest Systems:** Cover anchorage selection, rescue planning, and equipment inspections before personnel use personal fall arrest systems in assigned tasks. Train employees exposed to fall hazards to recognize fall hazards and the procedures to minimize them, including use and inspection of fall arrest systems. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 13; 29 CFR 1910.66 - Powered platforms for building maintenance; 29 CFR 1926.503 - Training requirements

  Second Floor Training Room
- **Active Shooter Response Methods:** Not entered
- **Adverse Weather Shelter:** Seek Shelter in SIP point First Floor: Rm 104 Breakroom

No evacuation route image uploaded.

Emergency Equipment and Safety Board

Safety Bulletin Board Location: Not entered

List fire pull stations, extinguishers, power cutoffs, eyewash stations, AEDs, foam systems, and any local fire/emergency equipment notes.

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:
Requirements of Air Force Traffic Safety Program, including mandatory use of seat belts and helmets, speed limits, local traffic hazards, and personal risk management. Additionally, brief use of seat belts and helmets, speed limits, local traffic hazards, and personal RM. Additionally, brief use of electronic devices while GMV/PMV on or off base. IAW AFI 91-207. If Applicable, discuss Motorcycle Safety Training Requirements Before Riding A Motorcycle. (AFI 91-202 para. A4.1.9)

Seat belts will be worn on and off-base any time a vehicle is in motion. Emphasize that wear is MANDATORY. Discuss possible administrative actions if caught without utilizing the seat belt (i.e. possibility of losing driving privileges, tickets, fines, etc.). Discuss flightline- required usage in forward facing seats. Remember that use of belts is mandatory on or off base, on or off duty to include back seats. You will get ticketed. Buckle Up! (Ref AFI 91-207)

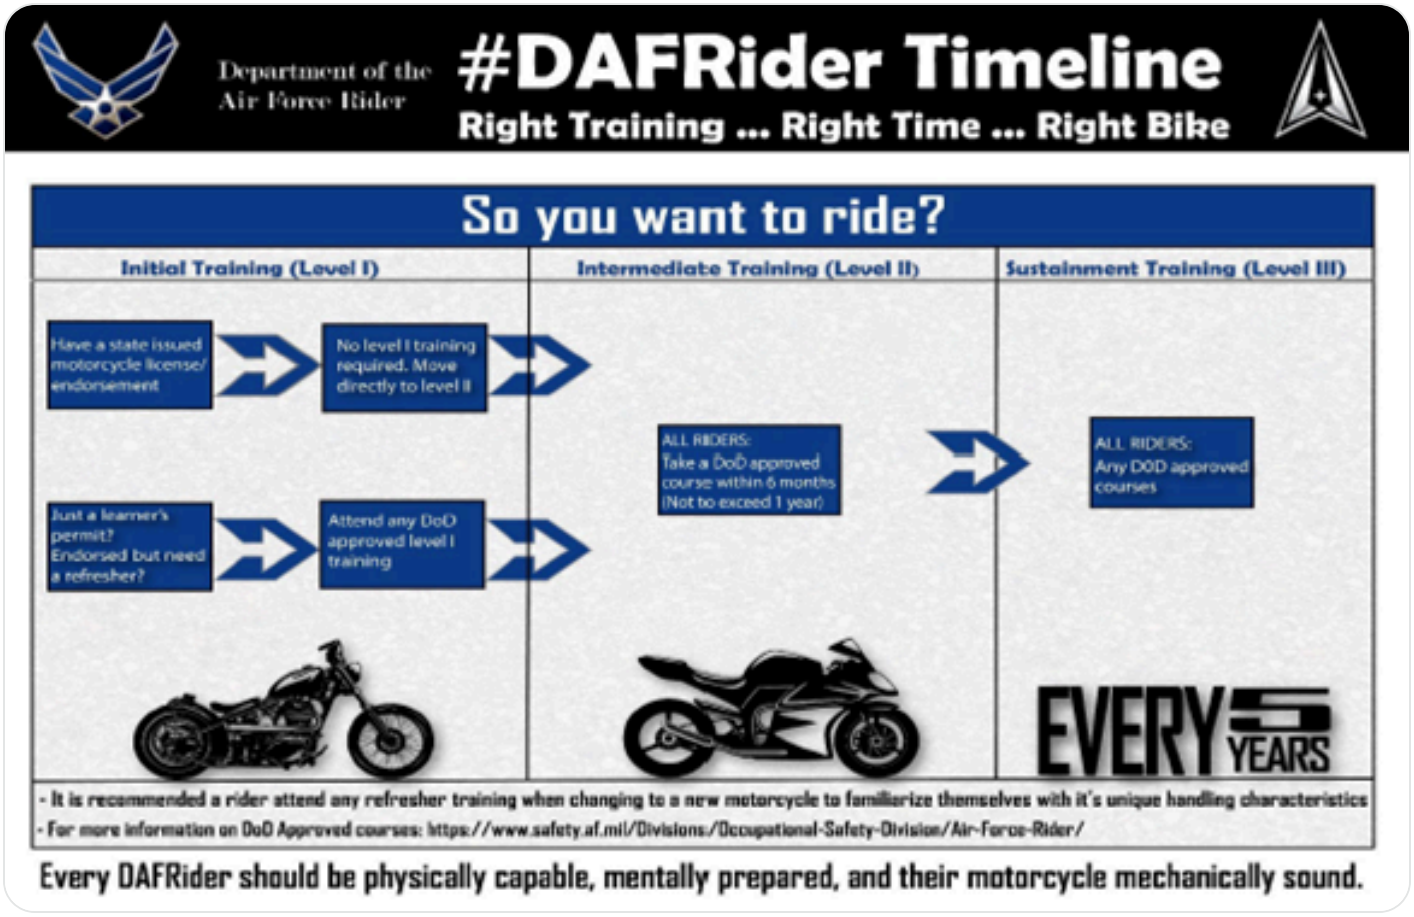

NOTE: Placing the shoulder strap under the arm or not using/disconnecting automatic belts constitutes “improper use” and could result in a citation - or worse yet additional/more severe injuries should you get into an accident.

If you are required to drive on the flightline, you must accomplish flightline driver training. Completion of the course includes formal training, a written exam, airfield diagram test, both a day and night familiarization, and a practical evaluation if required.

Cell phone use while driving is prohibited. If you are driving and you need to take a call, use handsfree device or safely pull off to the side of the road, put your hazards lights on and take the call.

Be aware of severely congested traffic on Highway 13 and Route 1 in Dover during NASCAR weekend. Use defensive driving techniques. Attempt to accomplish errands during the races, not before or after.

Motorcycle Safety Representatives / Traffic Contacts:
All newly assigned and PCS personnel who are motorcycle riders will be required to process through the commander or designated representative. Unit commander or designated MSR(s) will provide an initial briefing to all new or newly assigned motorcycle riders within 30 days from initial assignment, identification as a rider or purchase of a motorcycle

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

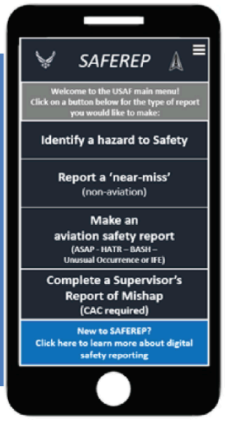

Safety Reporting … All In One Place

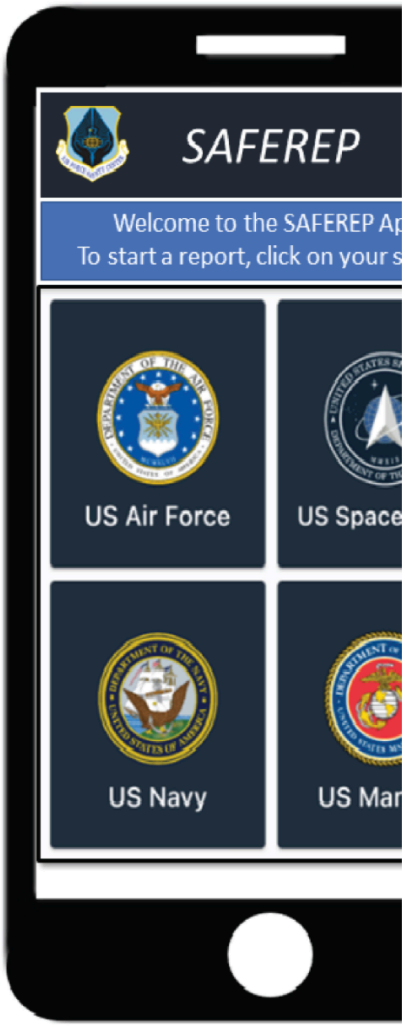

SAFEREP APP!

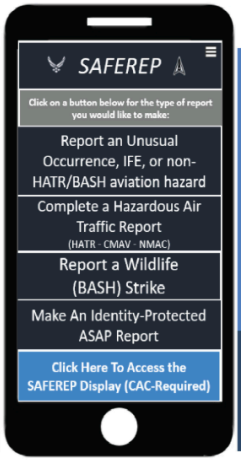

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- "Near miss" events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.
