

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 432 SPTS

Work Center: CEF

Work Area / Office Symbol: Fire Department / HSO

Phone: 702-404-2231

Supervisor: Ramon Fitzgerald / GS-13 / Fire Chief

Reviewer: Abel Salas

Review Date: 2026-08-03

Effective Date: 2026-08-03

Work Center Overview

The Fire and Emergency Services (F&ES) Flight operates 24/7/365 to provide rapid, comprehensive emergency response, including structural fire suppression, Aircraft Rescue and Firefighting (ARFF), hazardous materials (HAZMAT) response, technical rescue, and emergency medical services (EMS). Personnel maintain constant combat and emergency readiness while performing daily vehicle maintenance, equipment testing, facility fire prevention inspections, and rigorous physical and tactical training. Operating in a highly dynamic, industrial, and high-hazard environment, this work center is dedicated to protecting life, property, and mission-critical assets across the installation.

Work Area Hazard Analysis / JHA Notes

A comprehensive Job Hazard Analysis (JHA) must address diverse operational risks. Personnel face environmental hazards like seasonal heat and flooding, alongside facility-specific dangers such as faulty electrical equipment, wet floors, high noise, and poor air quality, which are mitigated through regular inspections and mandatory PPE. Highway operations introduce significant risks from managing large apparatus in high-speed traffic and adverse conditions, requiring strict adherence to vehicle placement and safety protocols. Furthermore, emergency medical responses present a primary hazard of exposure to contagious diseases and bloodborne pathogens. This risk is controlled by the mandatory use of specific PPE—including high-risk surgical gloves and eye protection—and adherence to stringent decontamination procedures.

Required Training Topics

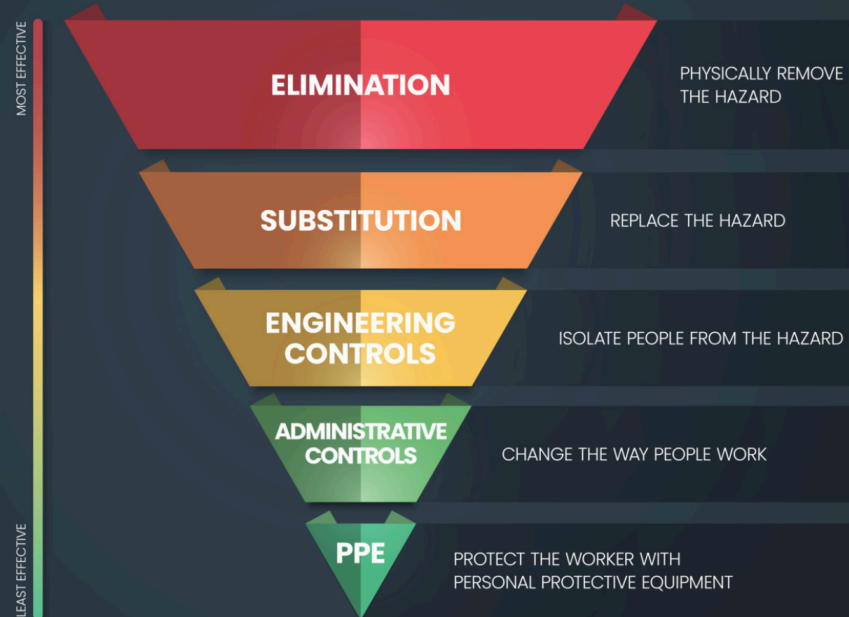

Workplace Hazards
Personal Protective Equipment
Emergency Action and Fire Prevention
Reporting Unsafe Equipment, Conditions, or Procedures
Mishap, Occupational Injury, and Illness Reporting
CA-10 and LS-201
DAF Traffic Safety Program
DAFVA 91-209 Location and Content
DAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

HIERARCHY OF **HAZARD CONTROLS**

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control
- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

The following modules apply to this work center and should be reviewed with trainees before task performance.

Hazardous Energy Control Hazard Communication Bloodborne Pathogens Hearing Conservation Confined Space Program Respiratory Protection Program Vehicle Mounted Elevated Work Platforms Fall Arrest Systems Explosives Safety Training CPR Training Flight Line Driving Fetal Protection Program Medical Surveillance Examination Laser Safety Training Active Shooter Response Government Vehicle / Utility Vehicle Use Manual Lifting and Material Handling Fire Protection and Prevention Jewelry / Loose Articles Restrictions Personal Protective Equipment (PPE) Firefighter Injury Prevention Emergency Medical Responder

- **Hazardous Energy Control:** Document initial and refresher training when job assignments, machines, processes, or energy control procedures change, or when inspections show employee knowledge gaps. Train authorized employees to recognize hazardous energy sources, the type and magnitude of energy present, and the methods and means for isolation and control. Train affected employees on the purpose and use of lockout/tagout procedures, and instruct all other employees on the prohibition against restarting locked or tagged equipment. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 21; 29 CFR 1910.147 - The control of hazardous energy (lockout/tagout)
- **Hazard Communication:** Provide HazCom training upon initial assignment, whenever a new chemical hazard is introduced, and when new tasks expose workers to different hazardous materials. Ensure workers know how to access local SDS information and labeling guidance. Train personnel on hazardous chemicals in their work area, labeling systems, safety data sheets, and

the measures they can take to protect themselves during normal operations and foreseeable emergencies. DAFI 90-821; 29 CFR 1910.1200 - Hazard Communication

- **Bloodborne Pathogens:** Enroll applicable workers in the local bloodborne pathogens program and ensure exposure control plan requirements, reporting actions, and PPE procedures are covered before task performance. Provide bloodborne pathogens training at initial assignment and at least annually thereafter, covering exposure control, modes of transmission, and protective measures. 29 CFR 1910.1030 - Bloodborne Pathogens
- **Hearing Conservation:** Ensure workers enrolled in hearing conservation understand noise hazard areas, double-hearing protection requirements, and local follow-up actions tied to occupational health evaluations. Train noise-exposed employees annually on the effects of noise, the purpose of hearing protectors, the advantages and disadvantages of various protectors, and the purpose of audiometric testing. DAFI 48-127; 29 CFR 1910.95 - Occupational noise exposure
- **Confined Space Program:** Provide duty-specific training for permit-required confined space roles, including monitor use, atmospheric hazards, entry permits, and rescue responsibilities before personnel participate in entries. Train entrants, attendants, supervisors, and rescue personnel so they understand their duties, hazards, signs and symptoms of exposure, communication procedures, and emergency actions before assignment. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 23; 29 CFR 1910.146 - Permit-required confined spaces
- **Respiratory Protection Program:** Document fit testing and occupational health training on AF Form 2767 and ensure wearers understand emergency-use limits, cartridge change-out, cleaning, and medical qualification requirements. Train users before respirator use and at least annually on why the respirator is necessary, how improper fit or maintenance can compromise protection, and how to inspect, don, doff, use, and store the respirator. DAFI 48-137; 29 CFR 1910.134 - Respiratory protection
- **Vehicle Mounted Elevated Work Platforms:** Use locally approved lesson plans with hands-on demonstration, written testing, and supervisor certification before operators use mobile elevating work platforms. Provide model-specific training, safe operating procedures, fall protection expectations, and emergency lowering actions before use of elevated work platforms. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 16
- **Fall Arrest Systems:** Cover anchorage selection, rescue planning, and equipment inspections before personnel use personal fall arrest systems in assigned tasks. Train employees exposed to fall hazards to recognize fall hazards and the procedures to minimize them, including use and inspection of fall arrest systems. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 13; 29 CFR 1910.66 - Powered platforms for building maintenance; 29 CFR 1926.503 - Training requirements
- **Explosives Safety Training:** Provide initial and task-specific explosives safety training using approved lesson plans, local instructions, and quantity-distance / compatibility controls before personnel work with explosives. Use explosives-specific AF lesson plans and local operating instructions. OSHA 2254 includes transportation and explosives references, but the Air Force explosives program should remain the primary training basis for this module. DESR 6055.09_DAFMAN 91-201 - Explosives Safety Standards; DAFI 91-202 - The Department of the Air Force (DAF) Mishap Prevention Program
- **CPR Training:** Ensure designated responders maintain current certification and understand location and use of local AED assets under the unit mishap prevention program. Provide CPR and AED training before assignment where required, and refresh qualification before expiration. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 1
- **Flight Line Driving:** Use installation or unit-approved training and certification for airfield/fight line operations, to include local speed, spotter, and no-lone-zone requirements. Provide local flight line driving rules, markings, vehicle lighting requirements, restricted areas, and aircraft hazard awareness before granting driving privileges. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 24
- **Fetal Protection Program:** Use occupational and environmental health guidance to discuss declaration options, exposure review, and local work restriction procedures. Provide job-specific

hazard awareness for reproductive health risks where occupational exposures may affect pregnant workers or fetuses. DAFMAN 48-146

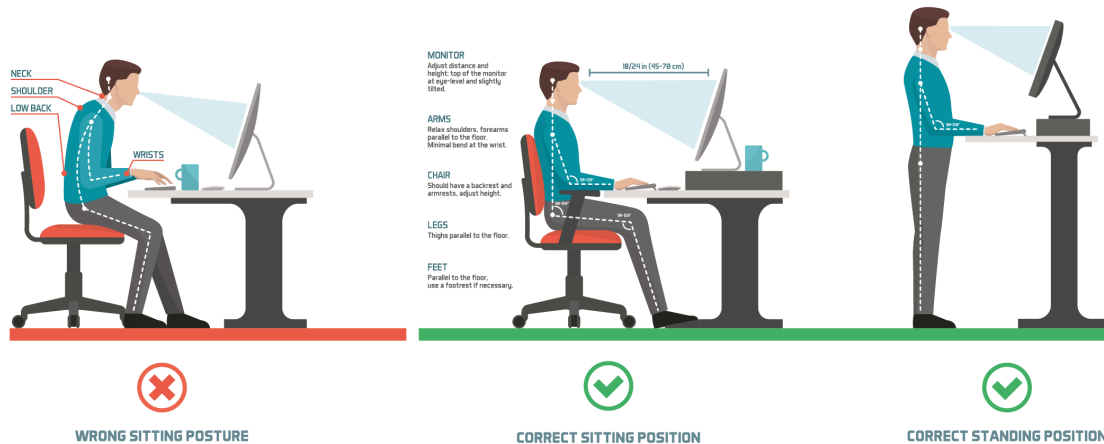

- **Medical Surveillance Examination:** Cover local scheduling, reporting, and follow-up processes for required occupational and environmental health evaluations. Ensure workers understand when medical surveillance examinations are required, how they are scheduled, and why participation is tied to specific exposures. DAFI 48-145 - Occupational and Environmental Health Program
- **Laser Safety Training:** Use local laser safety officer guidance and approved operating instructions to cover exposure limits, alignment procedures, and emergency actions. Provide laser hazard awareness, eyewear, posting, alignment, and beam-control training before personnel work with lasers or enter laser-controlled areas. DAFI 48-139
- **Active Shooter Response:** Use local emergency response procedures, shelter locations, and mass notification methods applicable to the duty location. Brief personnel on how to recognize an active shooter event, how to summon help, and how to apply local run-hide-fight guidance based on the facility layout. Installation emergency management guidance / local procedures
- **Government Vehicle / Utility Vehicle Use:** Brief operators on unit-specific government vehicle training requirements, local route restrictions, low-speed vehicle rules, and documentation of qualification. Train vehicle operators on seat belts, speed limits, local traffic hazards, spotter use while backing, and restrictions on electronic device use while driving. DAFI 91-207; local procedures
- **Manual Lifting and Material Handling:** Provide verbal and written guidance on manual lifting, lifting devices, and local reporting actions for strain or overexertion symptoms. Train workers on proper lifting techniques, team lifting, load assessment, and use of lifting aids to reduce musculoskeletal injury risk. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 20
- **Fire Protection and Prevention:** Use the JSTO and local fire prevention plan to brief workers on work-center fire hazards, alarm reporting, extinguisher use, and evacuation accountability. Train personnel on fire hazards, reporting procedures, extinguisher locations, evacuation routes, pull stations, and local emergency response actions. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards; local fire prevention plan
- **Jewelry / Loose Articles Restrictions:** Use local work-center restrictions and equipment guidance to define prohibited items and exceptions for mission-essential tasks. Train workers on removing jewelry and securing loose articles when working around machinery, electrical hazards, rotating equipment, or snag hazards. Local procedures / equipment guidance
- **Personal Protective Equipment (PPE):** Use the work-center JHA, BE occupational health assessment, manufacturer instructions, DAFMAN 91-203 Chapter 14, and local safety office guidance to identify PPE requirements. Supervisors must ensure PPE is provided, used, cleaned, inspected, maintained in sanitary and serviceable condition, and documented in JSTO training records. Cover eye and face protection, head protection, foot protection, hand protection, protective clothing, and respiratory or hearing protection when those programs apply. Train each affected worker on when PPE is necessary, what PPE is necessary, how to properly don, doff, adjust, and wear PPE, the limitations of assigned PPE, and the proper care, maintenance, useful life, and disposal of PPE. Require workers to demonstrate understanding and proper use before performing work requiring PPE, and retrain when workplace conditions, job assignments, PPE types, or worker knowledge gaps make prior training obsolete. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 14; 29 CFR Part 1910 - Occupational Safety and Health Standards (General Industry Standards) Subpart I; 29 CFR 1910.132; 29 CFR 1910.133; 29 CFR 1910.135; 29 CFR 1910.136; 29 CFR 1910.138
- **Firefighter Injury Prevention:** Document the governing reference, training location, and how completion is tracked for this custom module. Describe the unit-specific hazard, certification, or recurring training requirement that applies to this work center. See Local Document
- **Emergency Medical Responder:** Document the governing reference, training location, and how completion is tracked for this custom module. Describe the unit-specific hazard, certification, or recurring training requirement that applies to this work center. IAW Annual Training Plan

Use this guide while briefing office and administrative workstation setup.

References

Foundational workplace safety and JSTO development requirements are mandated by DAFI 91-202 - The Department of the Air Force (DAF) Mishap Prevention Program (The US Air Force Mishap Prevention Program), DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards (Air Force Occupational Safety, Fire, and Health Standards), and federal OSHA standards under Title 29 CFR § 1910. Operational guidelines, training, and emergency response parameters are dictated by AFMAN 32-1007 (Fire and Emergency Services Flight Operations), alongside overarching DoD policy defined in DoDI 6055.06 and DoDM 6055.06, which ensure adherence to National Fire Protection Association (NFPA) professional qualifications. Furthermore, due to the high-hazard nature of firefighting and medical response, strict occupational health directives apply; these include DAFI 48-137 for the Respiratory Protection Program (governing SCBA use), AFI 48-127 - Occupational Noise and Hearing Conservation Program for the Occupational Noise and Hearing Conservation Program, and 29 CFR § 1910.1030 to ensure compliance with Bloodborne Pathogens standards.

Required Documents

- [CA-10](#)
What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.
- [DAF Form 457](#)
Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or procedures in the workplace.
- [DAFVA 91-209](#) **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations.
Location Posted: Bulletin boards at each Fire Station.

- [LS-201](#)
Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** Agency / Service Commercial Phone DSN

Emergency (Landline) 911 911

Emergency (Cell Phone) (702) 404-0911 N/A

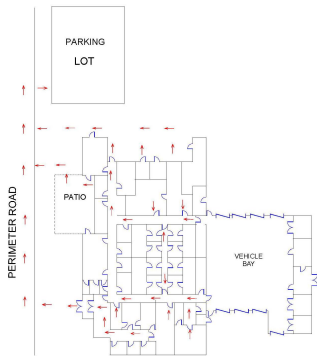

Base Defense Ops Center BDOC (702) 404-3333 DSN 384-3333

Fire Dispatch (Non-Emergency) (702) 404-0214 / 0213 DSN 384-0214

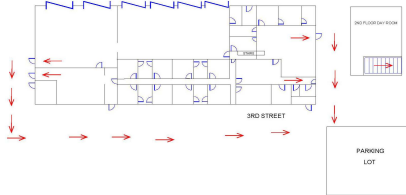

- **Medical Facility / Treatment:** The Hunters Medical Clinic (Bldg 1033) serves as the primary medical facility on Creech AFB, providing Flight Medicine, Family Health, and outpatient services during duty hours (Monday–Friday). On-base emergencies requiring immediate medical treatment are handled by calling 911 (or 702-404-0911 from a cell phone) to initiate a response from the clinic's localized ambulance service. For acute or after-hours emergencies, patients are transported to the 24/7 Emergency Department at Mike O'Callaghan Military Medical Center on Nellis AFB or local civilian trauma facilities. Active-duty personnel requiring standard medical treatment must utilize scheduled appointments or the designated morning flight medicine sick call, and they must contact the Nurse Advice Line for off-base urgent care referrals to avoid unauthorized billing.
- **Evacuation / Muster Point:** Personnel will evacuate to designated assembly points, ensuring they evacuate all fire vehicles and apparatus from the bays only if it is safe to do so. For personnel in Building 1150, the muster point is the parking lot located to the west of the main entrance. For personnel in Building 85, the evacuation point is the theater parking lot (Bldg. 39). All individuals must remain at their designated assembly point until formally cleared to leave by Senior Fire Officer.
- **Shelter in Place:** Bldg. 85: Located in Room 3
Bldg. 1150: Located in Room 145
- **Active Shooter Response Methods:** Lock all doors, close hangar doors, and all personnel remain in their individual offices and bunkrooms. Use available phone/radio to communicate threat. Run - Hide - Fight - Wait until all clear!
- **Adverse Weather Shelter:** Use Shelter In Place rooms at either stations as they do not have windows.

Emergency Evacuation Route Image:

BLDG 1150 EVACUATION PLAN

Emergency Equipment and Safety Board

Safety Bulletin Board Location: Your safety bulletin board is located:
Fire Station 1 Building 1150 – main hallway outside of the Training Room
Fire Station 2 Building 85 – hallway near restroom.

Emergency equipment and fire protection systems are strategically located throughout the fire stations for immediate access. Emergency power cutoff panels are situated in the East Side Mechanical Room for Station 1 and the West Side Mechanical Room for Station 2. Fire alarm pull boxes and fire extinguishers are distributed throughout both buildings, primarily near exits and in various other locations around each station. Additionally, a Bomb Threat Checklist is available near the phone and within the Creech Phone Directory for reference during such an event. Supervisors are responsible for showing all personnel the specific locations of this equipment.

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:

Personnel must remain aware of local traffic hazards, particularly on I-95, which is prone to construction, peak flow congestion, and hazardous conditions like potholes and flooding after rainstorms. Drivers are required to follow all state and local laws, including speed limits, seat belt use, and the prohibition of cell phone use without a hands-free device. Vehicle-specific safety procedures mandate the use of spotters when backing, careful placement of apparatus on highways to protect responders from traffic, and heightened awareness of noise and air quality hazards from vehicle operations within the station.

Motorcycle Safety Representatives / Traffic Contacts:

Air Force Rider

#DAFRider Timeline

Right Training ... Right Time ... Right Bike

So you want to ride?

Every DAFRider should be physically capable, mentally prepared, and their motorcycle mechanically sound.

Risk Assessment for Routine Use of GVOs in Traffic, Industrial, or Pedestrian Environments:

[Vehicle Operations Risk Assessment.docx](#)

[Vehicle Operations Risk Assessment.docx](#)

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

Documentation and Review

In accordance with DAFI 91-202, the JSTO will be reviewed annually and updated whenever there are changes to equipment, procedures, or the work environment. Training provided to our personnel will be documented on Form 55 to ensure for accountability of required training to supervisor/trainee.

Bioenvironmental Workplace Survey: No Bioenvironmental Workplace Survey uploaded.

Applicable Job Hazard Analyses: No Job Hazard Analysis files uploaded.
