

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 62 OG

Work Center: CSS

Work Area / Office Symbol: 62 OG/OSS CSS/Bldg. 100

Phone: 312-382-0765

Supervisor: Frank Cope, Lt Col, Commander

Reviewer: 62 OSS/CSS

Review Date: 2026-08-18

Effective Date: 2026-08-18

Work Center Overview

Actions on comprehensive administrative, personnel, and commander support programs. Duties include but are not limited to, Management of evaluations, decorations, leave programs, and personnel data systems to sustain daily operations, unit morale, force health.

Work Area Hazard Analysis / JHA Notes

For Musculoskeletal Disorders (MSDs), lower back pain, neck strain (Implement adjustable task chairs, monitor stands, and keyboard trays. Encourage 5-minute stretch breaks every hour), For Carpal Tunnel Syndrome, tendonitis (Utilize ergonomic keyboards/mice. Ensure the wrist remains in a neutral, straight position during input), For Headaches, blurred vision, dry eyes (Position monitors 20–40 inches from eyes with the top of the screen at or slightly below eye level. Implement the 20-20-20 rule (look 20 feet away for 20 seconds, every 20 minutes))

Required Training Topics

Workplace Hazards Personal Protective Equipment Emergency Action and Fire Prevention Reporting Unsafe Equipment, Conditions, or Procedures Mishap, Occupational Injury, and Illness Reporting CA-10 and LS-201 DAF Traffic Safety Program DAFVA 91-209 Location and Content DAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control
- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

No job-specific modules selected yet.

No modules selected

References

Various reference documents.

Required Documents

- [CA-10](#)
What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.

- [DAF Form 457](#)
Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or procedures in the workplace.
- [DAFVA 91-209](#) **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations.
Location Posted: Bldg. 100, Suite 2093 (62 OSS Lobby)
- [LS-201](#)
Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** 911, 62d AW Command Post (DSN 382-2635)
- **Medical Facility / Treatment:** 62d Medical Squadron (DSN 382-4018)
- **Evacuation / Muster Point:** Primary (for OG/CSS personnel) Use West side of building exits to rally near flag pole. Primary (for OSS personnel) Use South side of building to rally near Heritage Hill. Alternate (for all) Use main gate located at Fairway Rd, McChord AFB, WA 98438
- **Shelter in Place:** Bldg. 100
- **Active Shooter Response Methods:** Secure the Room, Deny Visuals, Silence Electronics and Remain Silent
- **Adverse Weather Shelter:** Bldg. 100

No evacuation route image uploaded.

Emergency Equipment and Safety Board

Safety Bulletin Board Location: Bldg. 100, Suite 2093 (62 OSS Lobby)

Class A, B, C (Multi-Purpose Dry Chemical) • Ordinary combustibles (paper, wood) • Flammable liquids • Electrical fires (computers, servers) 1. Accessibility: Ensure the unit is completely unobstructed. 2. Pressure Gauge: Verify the needle is in the green zone. 3. Physical Condition: Check for rust, dents, or a clogged nozzle. 4. Safety Seal: Confirm the plastic pull-pin seal is intact. 5. Inspection Tag: Sign and date the monthly inspection tag. -- Fire Alarm Pull Stations • Must remain completely unobstructed at all times. A minimum of 36 inches of clearance is required in front of every pull station. -- Sprinkler Heads • Maintain at least 18 inches of clearance below all sprinkler heads (NFPA 13). Do not stack boxes of paper, supplies, or mobility gear within 18 inches of the ceiling, as this disrupts the water spray pattern. -- Emergency Lighting: Hallways, stairwells, and exit doors must remain completely clear of clutter. No mobility bags, training materials, or surplus chairs may be stored in designated escape corridors.

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:

Vehicular route to main gate contains a railroad system 100 yards before exiting installation.

Motorcycle Safety Representatives / Traffic Contacts:

N/a

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

Safety Reporting ... All In One Place

SAFEREP APP!

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- "Near miss" events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.

Documentation and Review

Training roster(s) will be locally generated by 62 OSS/OSX and filed in a maintained shared drive for record.

Bioenvironmental Workplace Survey: No Bioenvironmental Workplace Survey uploaded.

Applicable Job Hazard Analyses: No Job Hazard Analysis files uploaded.

Annual Review Log:

Supervisor (62 OSS/CC) will perform review and implementation within 30 days after gaining command. Annual review will be performed within 365-day timeframe, after, to meet annual review requirement. This JSTO has oversight of the 62 OSS/CC for Command Support Staffs of both 62 OG and 62 OSS.
