Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: AFDW

Work Center: Safety

Work Area / Office Symbol: SE

Phone: 240-612-6488

Supervisor: Lt Col Jared Hann

Reviewer: Mr. Orbits

Review Date: 2027-10-08

Effective Date: 2026-10-08

Work Center Overview

The Air Force District of Washington Safety Office, located at Joint Base Andrews, Maryland, serves as the command's primary advisor for flight, ground, and weapons safety across AFDW-supported organizations. Its mission is to promote a proactive safety culture, reduce risk, prevent mishaps, and protect Airmen, civilian personnel, visitors, and Air Force resources. Typical duties include advising the AFDW commander, directors, wing commanders, supporting hazard identification and risk-management efforts; coordinating safety training and awareness programs; assisting with mishap prevention,

reporting, and lessons learned; and helping ensure safe execution of daily operations, training, maintenance, travel, and special events.

Work Area Hazard Analysis / JHA Notes

Primary work hazards include: - Office ergonomics, including repetitive-motion, workstation, and manual material-handling hazards. - Slips, trips, and falls from cords, wet floors, uneven surfaces, stairways, ladders, and elevated work. - Electrical hazards associated with office equipment, power strips, damaged cords, and unauthorized equipment. - Fire, evacuation, severe weather, and emergency response hazards. - Cleaning chemical exposure, including disinfectants, bleach, and other common cleaning products. - Vehicle, pedestrian, bicycle, parking-lot, and flight-line hazards when performing duties outside the office area.

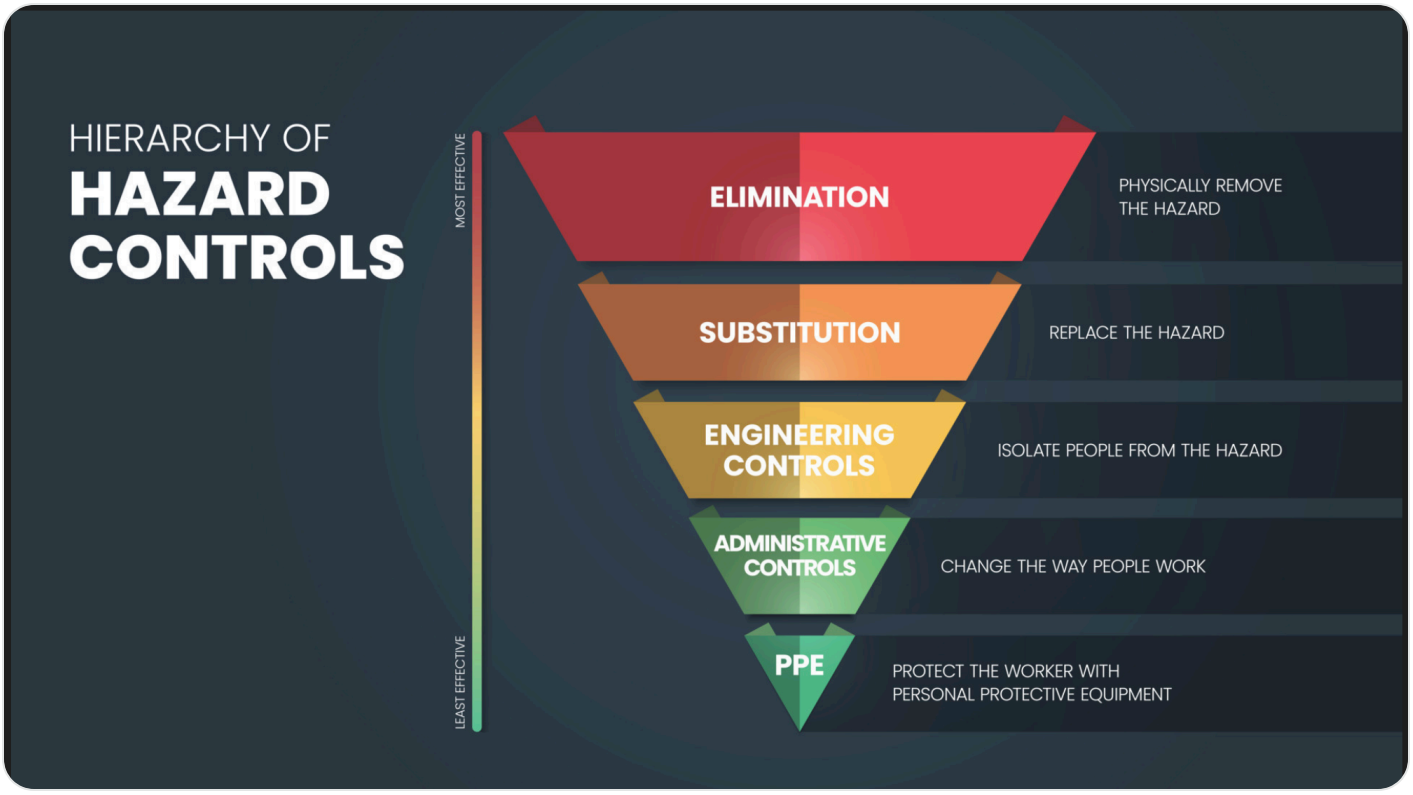

Required Training Topics

Workplace HazardsPersonal Protective EquipmentEmergency Action and Fire PreventionReporting Unsafe Equipment, Conditions, or ProceduresMishap, Occupational Injury, and Illness ReportingCA-10 and LS-201DAF Traffic Safety ProgramDAFVA 91-209 Location and ContentDAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

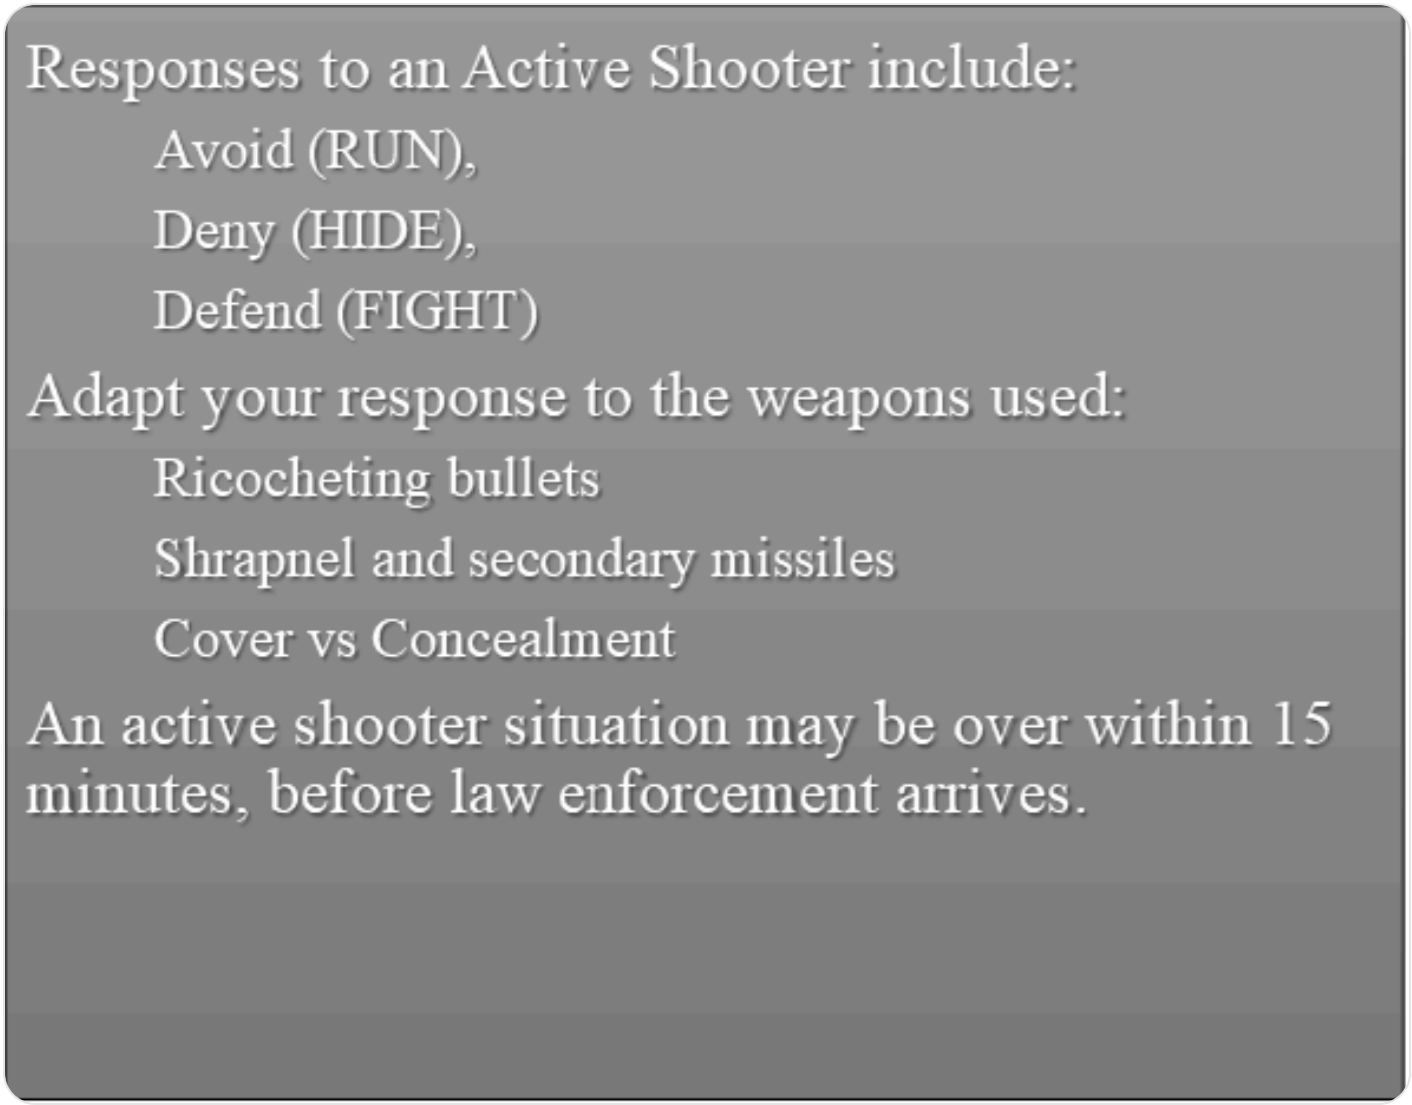

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

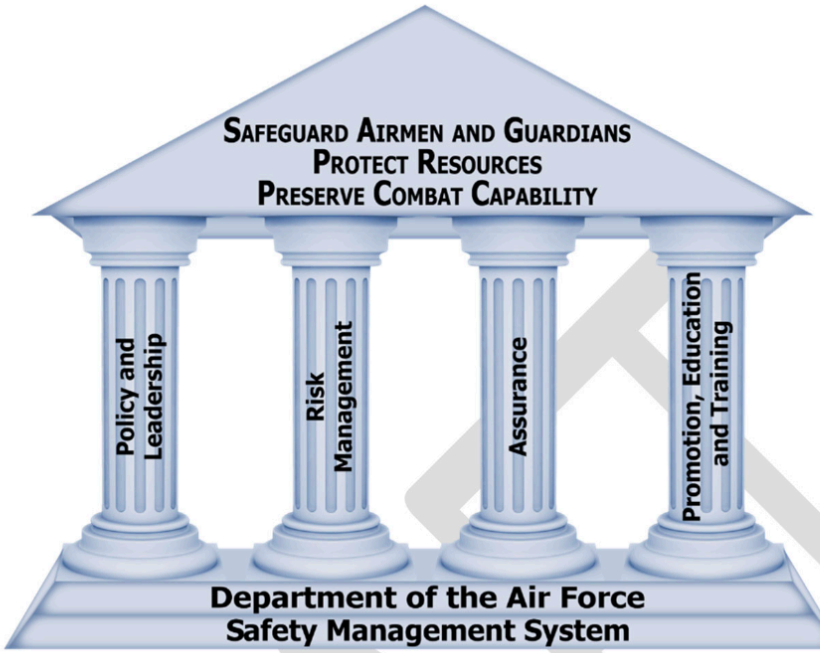

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter’s location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control

- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

The following modules apply to this work center and should be reviewed with trainees before task performance.

Flight Line DrivingActive Shooter ResponseGovernment Vehicle / Utility Vehicle UseManual Lifting and Material HandlingFire Protection and PreventionJewelry / Loose Articles Restrictions

- **Flight Line Driving:** Use installation or unit-approved training and certification for airfield/fight line operations, to include local speed, spotter, and no-lone-zone requirements. Provide local flight line driving rules, markings, vehicle lighting requirements, restricted areas, and aircraft hazard awareness before granting driving privileges. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 24
- **Active Shooter Response:** Use local emergency response procedures, shelter locations, and mass notification methods applicable to the duty location. Brief personnel on how to recognize an active shooter event, how to summon help, and how to apply local run-hide-fight guidance based on the facility layout. Installation emergency management guidance / local procedures
- **Government Vehicle / Utility Vehicle Use:** Brief operators on unit-specific government vehicle training requirements, local route restrictions, low-speed vehicle rules, and documentation of qualification. Train vehicle operators on seat belts, speed limits, local traffic hazards, spotter use while backing, and restrictions on electronic device use while driving. DAFI 91-207; local procedures

- **Manual Lifting and Material Handling:** Provide verbal and written guidance on manual lifting, lifting devices, and local reporting actions for strain or overexertion symptoms. Train workers on proper lifting techniques, team lifting, load assessment, and use of lifting aids to reduce musculoskeletal injury risk. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 20
- **Fire Protection and Prevention:** Use the JSTO and local fire prevention plan to brief workers on work-center fire hazards, alarm reporting, extinguisher use, and evacuation accountability. Train personnel on fire hazards, reporting procedures, extinguisher locations, evacuation routes, pull stations, and local emergency response actions. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards; local fire prevention plan
- **Jewelry / Loose Articles Restrictions:** Use local work-center restrictions and equipment guidance to define prohibited items and exceptions for mission-essential tasks. Train workers on removing jewelry and securing loose articles when working around machinery, electrical hazards, rotating equipment, or snag hazards. Local procedures / equipment guidance

Required Documents

- CA-10
  What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.
- DAF Form 457
  Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or procedures in the workplace.
- DAFVA 91-209 **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
  Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations.
  Location Posted: Enter where DAFVA 91-209 is posted for this work center.
- LS-201
  Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** - Emergency Numbers: From Land line: 911
  - From cell phone: 301-981-9911. In the event of a fire, medical emergency, security incident, hazardous condition, or other immediate threat to life or property, personnel will promptly contact emergency services.
  - From a landline: Dial 911.
  - From a cellular phone: Dial 301-981-9911.

  When contacting emergency dispatch, remain calm and provide the following information:
  - Exact location, including building number, floor, room, or nearest identifiable landmark.
  - Nature of the emergency (e.g., medical emergency, fire, injury, aircraft-related hazard, suspicious activity, or hazardous material spill).
  - Number of personnel involved or injured and the apparent severity of injuries, if known.
  - Any immediate hazards present, such as fire, smoke, fuel, moving vehicles, aircraft operations, electrical hazards, or unsafe conditions.
  - A callback telephone number and point of contact, if available.
  - Personnel should not place themselves at risk while reporting an emergency. If safe to do so,

notify nearby personnel, activate the appropriate alarm system, provide basic aid within the limits of training, and direct emergency responders to the location. Follow installation emergency procedures,

- **Medical Facility / Treatment:** Medical Facility / Treatment: Personnel will use Malcolm Grow Medical Clinics and Surgery Center at Joint Base Andrews for routine medical care, treatment, and occupational health support.
  When performing duties at another military installation, personnel may use the local military treatment facility in accordance with installation procedures and eligibility requirements.
  If medical assistance is required outside normal on-base clinic hours, personnel should seek care at a local emergency room or urgent care facility, as appropriate to the severity of the condition.
  For life-threatening emergencies, personnel should immediately call 911 .
  On Base ER hours: 0700 to 1900 hours, 7 days a week
- **Evacuation / Muster Point:** Evacuation Routes and Assembly Areas
  Fire:
  In the event of a fire or other evacuation emergency, personnel will immediately use the nearest safe, designated exit from their office or work area. Do not use elevators during a fire evacuation. If the primary exit is unsafe or inaccessible, use an alternate designated exit. After exiting the building, proceed to Chaple 1, 1345 Arkansas Rd, Joint Base Andrews, MD 20762 and report to the designated representative for your office, workplace, or directorate for accountability. Remain at the assembly area until released or directed otherwise by emergency responders or designated building personnel.

  Bomb Threat:
  In the event of a bomb threat, personnel will follow instructions announced through the Giant Voice system, building emergency notification system, or provided by emergency responders and building officials. When directed to evacuate, exit the building through the nearest safe, designated exit and proceed to the assembly area at Chaple 1, 1345 Arkansas Rd, Joint Base Andrews, MD 20762. Report to the designated accountability representative for your office, workplace, or directorate. Do not reenter the building or leave the assembly area until authorized by emergency responders or designated building personnel.
- **Shelter in Place:** Personnel will follow instructions provided through the Giant Voice system, building emergency notification system, emergency responders, or designated building personnel. Remain in the shelter location until an all-clear is announced or personnel are directed to relocate.

  Exterior incidents near Bldg 1500:
  Move away from the windows and exterior walls of the facility.
- **Active Shooter Response Methods:** An active-shooter/hostile-person situation as where an individual is actively engaged in killing or attempting to kill people in a confined and other populated area and continues until stopped by law enforcement, suicide, or intervention.
  NOTIFICATION
  1. Notify bystanders of the emergency and dictate their assistance; direct an individual to call 9-1-1 or 301-981-9911 and remain on the line until situation is handled or becomes too hazardous to remain.
  2. Initiate the Plan specific to the mission profile.
  RESPONSE
  A. Run
  1. Have an escape route and plan in mind.
  2. Leave your belongings behind.
  3. Help others escape, if possible.
  4. Evacuate regardless of others.
  5. Warn/prevent individuals from entering.
  6. Do not attempt to move wounded people.
  7. Keep your hands visible.
  8. Follow police instructions.

9. Call 9-1-1 when safe.
B. Hide
1. Lock doors.
2. Hide behind large items (e.g., cabinet, desk) offering protection, if shots are fired.
3. Out of the active shooter's view.
4. Silence cell phone/pager.
5. Remain quiet.
6. Do not restrict options for movement.
7. Provide Law Enforcement with Information (if safe to do so)
a. Location of shooters.
b. Number of shooters.
c. Physical description of shooters.
d. Number and types of weapons.
e. Number of potential victims.
C. Fight (as last resort)
1. Act as aggressively as possible.
2. Throw items and use improvised weapons.
3. Work together to incapacitate the shooter.
4. Commit to your actions.
EVACUATION:
1. Personnel are to evacuate the facility by the closest exit following published procedures.
2. representatives are to escort contractors and visitors.
3. Supervisors are to verify their areas are clear of personnel.
4. Personnel, temporary workers, contractors, and visitors are to report to an established assembly area and wait to be released.
5. Supervisors will take accountability of their personnel, temporary workers, contractors, or visitors. If personnel are not accounted for, UNDER NO CIRCUMSTANCE WILL PERSONNEL RETURN TO THE BUILDING.
6. Supervisors will report accountability to their chain-of-command.
7. Supervisors and AFDW representatives will report accountability to the incident commander.
8. During adverse climate weather and after accountability is complete, Supervisors and AFDW will coordinate with the incident commander on options for personnel shelter.
REACTING TO LAW ENFORCEMENT:
1. Remain calm.
2. Put down any items.
3. Raise hands and spread fingers.
4. Avoid quick movements.
5. Avoid pointing, screaming, or yelling.
6. Proceed in direction from which Security Forces personnel are entering.

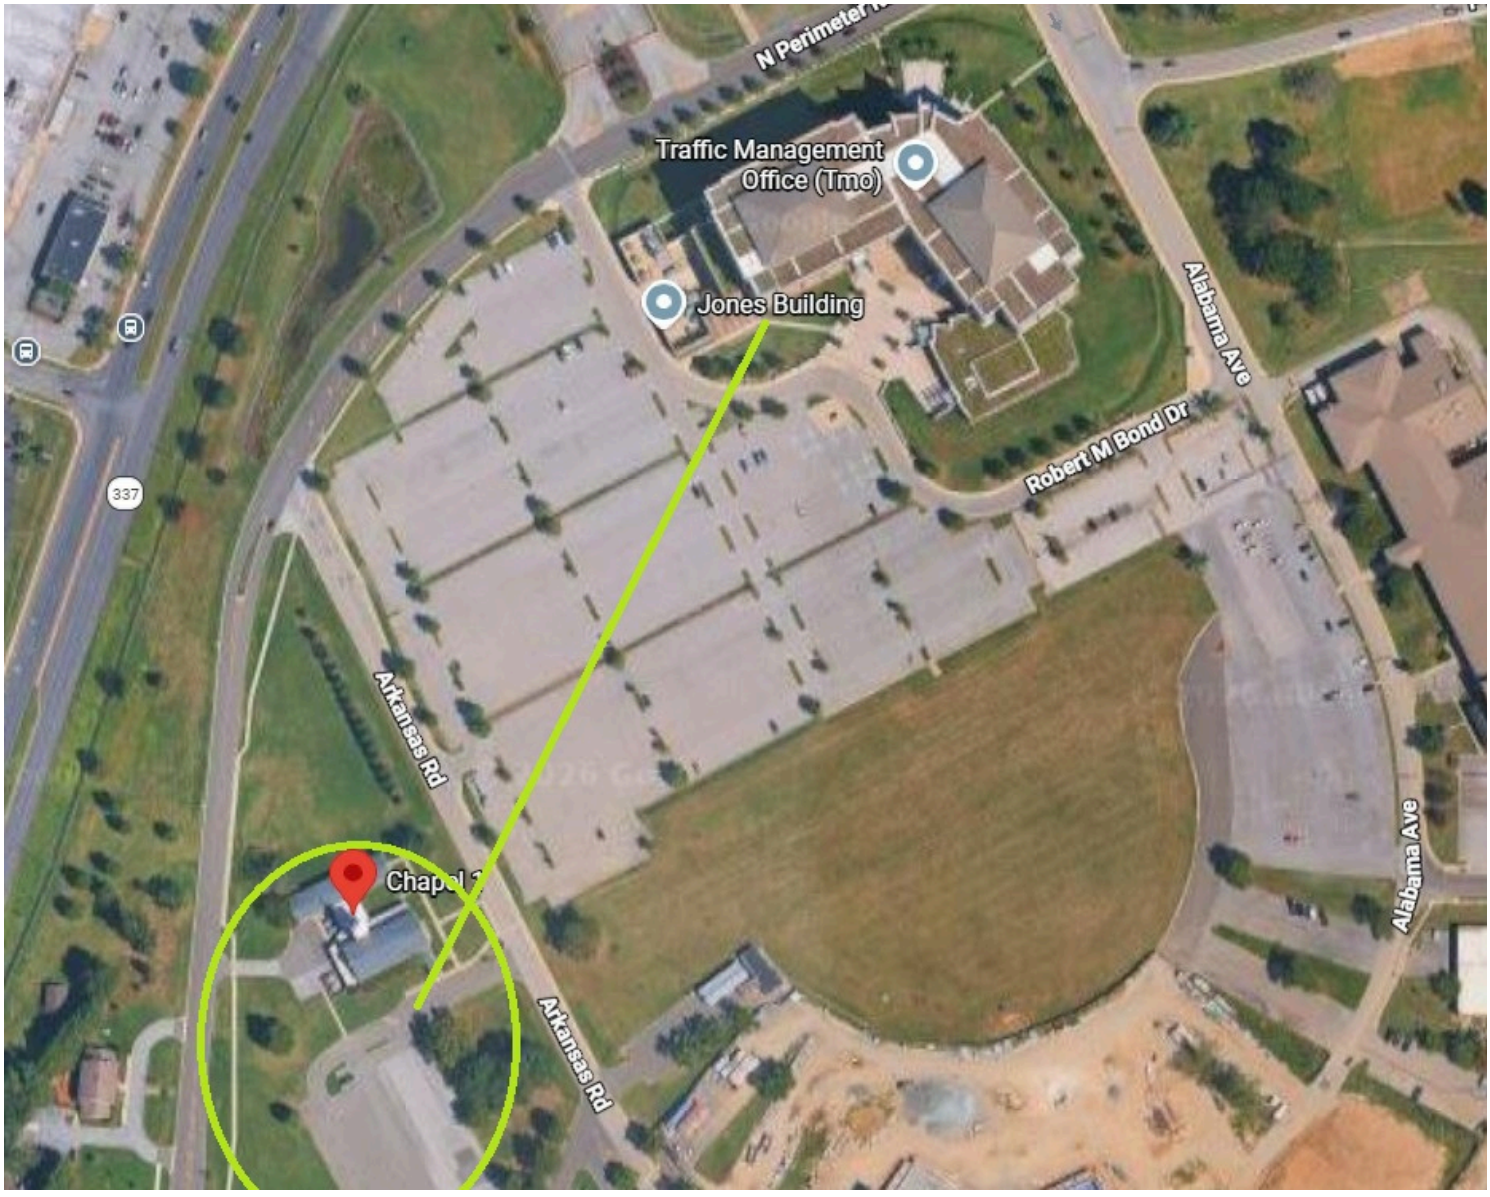

- **Adverse Weather Shelter:** Inclement Weather:
Tornado/High Winds:
When a tornado warning sounds or extreme straight-line winds are imminent, personnel must immediately relocate to the lowest building level, prioritizing reinforced interior rooms, basements, or windowless hallways while steering clear of wide-span roofs like auditoriums. Once inside the shelter area, everyone should drop low to the floor, assume a defensive crouch facing an interior wall, and protect their head and neck with their arms, heavy coats, or sturdy furniture until an official all-clear is broadcast.

Severe Thunderstorms & Lightning:
During severe thunderstorms producing violent cloud-to-ground lightning and large hail, personnel should move deep inside a permanent, fully enclosed structure and halt all outdoor operations or vehicle movements immediately. Once secured inside, individuals must stay away from exterior windows, glass doors, and plumbing fixtures, while disconnecting sensitive electronics and avoiding corded communications to eliminate electrical discharge pathways.

Blizzards & Extreme Winter Storms:
In the event of sudden blizzards, ice storms, or dangerous windchill temperatures, personnel must immediately halt non-essential travel and remain sequestered inside their current facility or quarters to avoid disorientation and hypothermia in whiteout conditions. Individuals should focus on heat conservation by sealing unused rooms, dressing in insulating layers, maintaining operational communication via battery-powered devices, and avoiding carbon monoxide hazards by never running combustion engines or portable generators indoors.

Flash Flooding & Rapid Inundation:
When rapid torrential rainfall triggers flash flooding that prevents safe outdoor evacuation, personnel should immediately secure low-lying entrances and move personnel and mission-critical assets to upper building levels. Individuals must strictly avoid walking, wading, or driving through standing or moving water—heeding the core safety principle of "Turn Around, Don't Drown"—and monitor emergency communications while staying out of closed attics where rising water could trap occupants.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

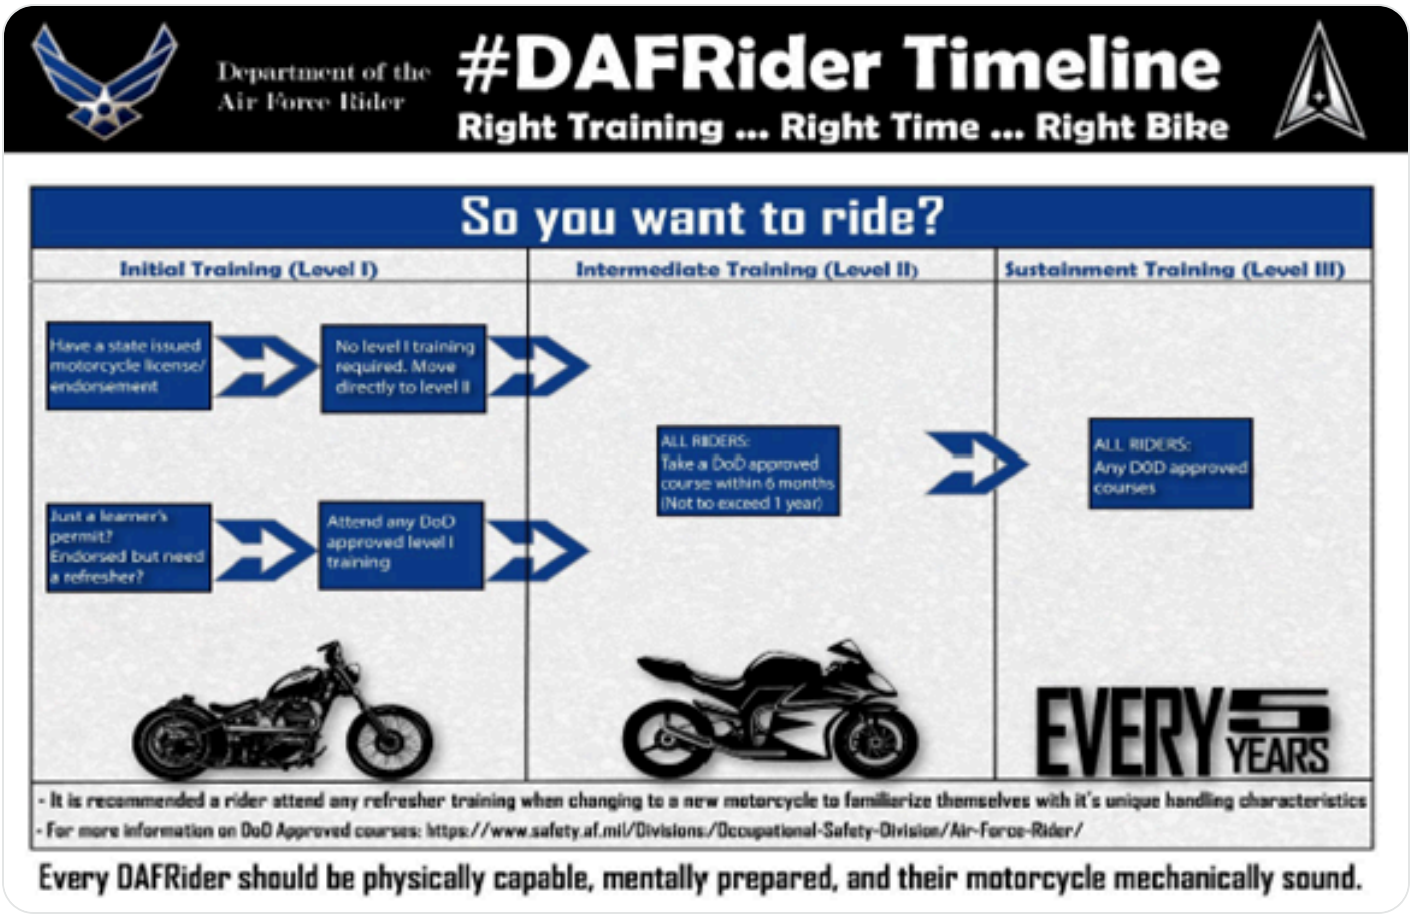

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:
Commuting on and around Joint Base Andrews (JBA) presents a distinct set of safety challenges that require constant driver vigilance, particularly during peak travel windows. Off-base, the proximity of major arterial routes like the Capital Beltway (I-495), Suitland Parkway, and Allentown Road introduces rapid speed transitions and dense commercial traffic, which often culminate in severe rear-end collisions and pedestrian risks. For drivers utilizing the installation’s gates, severe morning backups at the 24/7 Main Gate can spill dangerously backward onto Allentown Road, while specialized access points like the Pearl Harbor Gate introduce heavy vehicle merging conflicts alongside strict commercial inspection queues. Once past the perimeter, motorist safety remains tightly linked to flight line operations. During scheduled "ramp freezes" designed to secure VIP motorcades and aircraft movements, traffic on West, North, and South Perimeter Roads can come to an abrupt standstill, necessitating sudden detours and contributing to unexpected travel delays across the entire base.

Motorcycle Safety Representatives / Traffic Contacts:
The AFDW/CSS is the POC for MSRs and will direct members to the appointed MSR. Joint Base Andrews (JBA) enforces strict motorcycle safety guidelines in accordance with military regulations, requiring all active-duty military riders to register with their Unit Motorcycle Safety Representative (MSR) and maintain an updated profile in the Motorcycle Unit Safety Tracking Tool (MUSTT) database. To legally ride on or off the installation, personnel must complete mandatory Motorcycle Safety Foundation (MSF) training (with refreshers required every five years), attend the annual Pre-Season Rider Briefing, and consistently wear all required Personal Protective Equipment (PPE)—including a DOT-approved helmet, eye protection, sturdy over-the-ankle boots, full-finger gloves, and long-sleeved outerwear. Failure to meet these certification, database tracking, and gear requirements can result in the immediate suspension of on-base riding privileges.

Traffic Safety Risk Assessment:

This risk assessment examines the multifaceted hazards inherent to routine Government Motor Vehicle (GMV) operations across Joint Base Andrews, where high-tempo operational support routinely intersects with dense pedestrian corridors, commuter bottlenecks, early morning physical training formations, and prioritized VIP motorcades. While baseline operating conditions present critical-to-catastrophic initial risk levels—predominantly driven by potential vehicle-pedestrian collisions in community support areas and low-light visibility challenges during formation PT—the rigorous implementation of structured administrative controls, strict speed caps, zero-tolerance distracted driving policies, and mandatory ground-guide/backing procedures successfully depresses the overall residual risk posture to Low-to-Medium. Sustaining this acceptable profile depends directly upon command emphasis through Vehicle Control Officers, proactive 11 SFS enforcement, and individual driver adherence to the 'Circle of Safety' and right-of-way disciplines outlined herein.

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

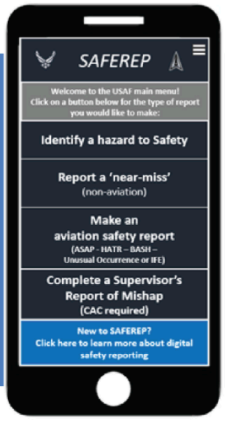

Safety Reporting … All In One Place

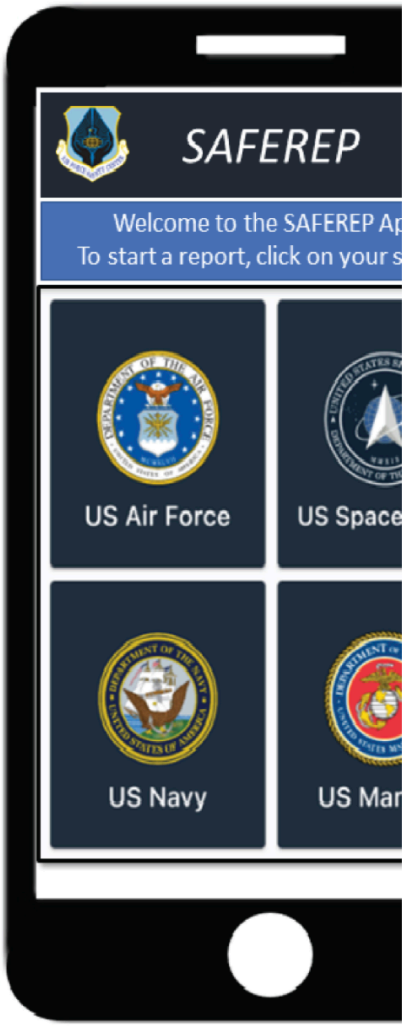

SAFEREP APP!

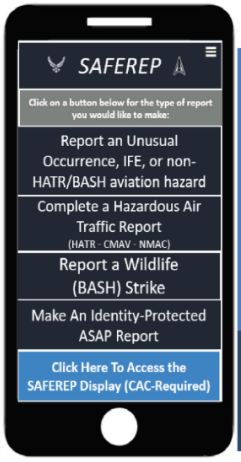

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- "Near miss" events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.
