

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 624th Regional Support Group

Work Center: Group Staff Agencies

Office Symbol: 624 RSG

Supervisor: SSgt Omar Venegas-Montes

Phone: (808) 449-7232

Reviewer: SSgt Omar Venegas-Montes

Review Date: 2026-05-20

Effective Date: 2026-05-21

WORK CENTER OVERVIEW

As Pacific Warriors, our team executes a diverse set of duties to ensure mission success. While the majority of our personnel focus on essential office-based administrative tasks, specialized roles require industrial and technical expertise. Specifically, Supply personnel are responsible for material handling and forklift operations, while Public Affairs specialists must be prepared to work on elevated platforms and at various heights to document our global impact.

REQUIRED TRAINING TOPICS

Workplace Hazards

Personal Protective Equipment

Emergency Action and Fire Prevention

Reporting Unsafe Conditions

Reporting Mishaps and Occupational Injury/Illness

CA-10 and LS-201

DAF Traffic Safety Program

DAFVA 91-209

DAFSMS Responsibilities

- **Hazards and controls:** Address task hazards, environmental hazards, governing instructions, and hierarchy of controls including elimination, engineering, substitution, and administrative controls.
- **PPE:** Cover required protective equipment, wear/use procedures, cleaning, maintenance, storage, disposal, and supervisor notification concerns.
- **Emergency response:** Cover emergency action, fire prevention, alarms, AEDs, extinguishers, evacuation, shelter, active shooter response, and emergency contact procedures.
- **Reporting:** Explain unsafe condition reporting, injury/illness reporting, DAF Form 457, SAFEREP access, and anti-retaliation protections.
- **Program awareness:** Include CA-10 / LS-201 location, traffic safety program requirements, DAFVA 91-209 location, and DAFSMS responsibilities.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively and take action against the shooter. Improvise weapons from your surroundings and commit to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS FRAMEWORK

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Provides the structure for a proactive mishap prevention program through policy, active leadership engagement, and clearly defined responsibilities at every level.

Risk Management

Integrates hazard identification, assessment, and control decisions into daily operations to reduce mishaps and strengthen safety culture.

Assurance

Uses evaluations, monitoring, reviews, and data to confirm the mishap prevention program is implemented and improving over time.

Promotion, Education, and Training

Ensures Airmen and Guardians receive safety awareness information, embedded training, effective risk controls, and active engagement in mishap prevention.

1. Purpose. DAFSMS utilizes the four pillars and the DAFSMS framework to structure the mishap prevention program. Activities associated with each pillar set policy, identify and mitigate hazards and risk, and reduce the occurrence and cost of injuries, illnesses, fatalities, and property damage through continuous improvement and the PDCA model.

2. Policy and Leadership. Safety policy provides the structure for a sound and proactive mishap prevention program. Active leadership involvement in implementation and execution is critical at all levels of command.

3. Risk Management. Ensure the RM process is fully integrated into all safety-related activities to enhance mishap prevention and sustain a proactive safety culture. Refer to DAFI 90-802 and DAFPAM 90-803 for additional detail.

4. Assurance. Safety assurance is how commanders determine whether mishap prevention elements are implemented and guides continuous improvement through evaluation, monitoring, and review.

5. Promotion, Education, and Training. Ensure Airmen and Guardians are provided safety awareness information, organizations have embedded ongoing training into the mishap prevention program, effective risk controls are implemented, and personnel remain actively engaged.

Report it on SAFEREP

HAZARDS ARE EVERYWHERE.

WHAT ARE **YOU** DOING TO
PREVENT INJURY OR DEATH?

More info about SAFEREP
www.safety.af.mil/home/saferep

SAFEREP is the Department of the Air Force's (DAF) premiere digital safety reporting tool and mobile app. It allows Airmen and Guardians to easily report hazardous conditions, near-misses, unintentional errors, or safety concerns across all disciplines, including workplace, traffic, industrial, flight, weapons, and space safety, directly from their devices anytime and anywhere.

Fully integrated with the Air Force Safety Automated System (AFSAS), it replaces the earlier Airman Safety App and serves as the DAF's only fully digital safety reporting avenue. Users simply answer a short series of questions to submit reports that reach the appropriate Major Command (MAJCOM) safety office quickly and efficiently.

Key Benefits for Job Safety Training:

- **Empowers everyone:** Turns every Airman or Guardian into a proactive sensor for hazard identification, encouraging a strong safety culture where people feel comfortable speaking up without barriers like paperwork or word-of-mouth delays.
- **Prevents mishaps:** Enables early mitigation of risks before they lead to incidents, capturing minor events and near-misses that offer the greatest prevention potential.
- **Simple and accessible:** Mobile-first design makes reporting fast, more efficient than traditional methods, and available on the spot through the app on Google Play and the Apple App Store.
- **Broad coverage and integration:** Supports multiple safety areas and includes specialized features such as Aviation Safety Action Program reporting, improving visibility, tracking, and overall risk management across the force.

This tool strengthens operational readiness by fostering a proactive, data-driven approach to safety. You can download it from the app stores or access it through the official SAFEREP site for more details.

REPORTING UNSAFE EQUIPMENT, CONDITIONS, OR PROCEDURES

Employees must report unsafe equipment, conditions, or procedures to their supervisor immediately. This includes any hazard that could injure personnel, damage equipment, or create an unsafe work process.

Personnel must also be notified that unsafe conditions, work-related injuries, and illnesses may be reported **without fear of retaliation**. Immediate supervisor involvement remains the primary reporting path, with SAFEREP and formal hazard-report channels available when needed.

What To Report

- Unsafe equipment that is broken, damaged, unserviceable, or missing required guards or controls.
- Unsafe conditions or procedures that create a hazard to personnel, operations, or facilities.
- Work-related injuries, illnesses, near-misses, and hazards needing immediate attention.

Immediate Actions

- Notify the supervisor or responsible area lead immediately.
- If the hazard can be safely controlled, stop use and isolate the equipment or area until corrected.
- If the danger is imminent to life or health, evacuate the area and activate emergency response procedures.

Tag use examples: Use the appropriate danger, caution, out-of-order, or do-not-start tag to keep unsafe equipment out of service until the hazard has been corrected and the responsible supervisor authorizes return to use.

Escalation: If the issue cannot be resolved at the lowest level, elevate it through the unit safety representative, DAF Form 457 process, or SAFEREP as appropriate.

LOCAL MISHAP / HAZARD REPORTING PROCEDURES

No local mishap or hazard reporting procedures uploaded.

USE OF PORTABLE FIRE EXTINGUISHERS

Portable fire extinguishers are intended for small, incipient-stage fires only. Personnel should use an extinguisher only when they have been trained, the fire is small and contained, the correct extinguisher is available, and there is a clear evacuation path behind them.

Use the **PASS** method when operating a portable fire extinguisher: **Pull** the pin, **Aim** at the base of the fire, **Squeeze** the handle, and **Sweep** side to side.

If the fire grows, smoke conditions worsen, or the extinguisher does not control the fire immediately, evacuate the area, activate the local emergency response process, and report the incident to emergency services and supervision.

WORK AREA HAZARD ANALYSIS

Group Safety will provide technical assistance to Group Staff Agency supervisors for the creation of Job Hazard Analyses (JHAs) upon the implementation of new substances, processes, or equipment.

RISK MANAGEMENT FUNDAMENTALS

Reference: DAFSMS and local RM program guidance.

Address hazard identification, control selection, local escalation expectations, and when RM refresher training must be completed for this work center.

To ensure safety across all operations, all DAF personnel (military and civilian) are required to take the DAF Risk Management Fundamentals course. Available through Percipio, this training provides the concepts and goals needed for Deliberate and Real-Time Risk Management, enhancing safety both on and off duty.

JOB SPECIFIC TRAINING ITEMS

Elevated Work Platforms

Forklift / Material Handling Equipment

Ladder Safety

Manual Lifting and Material Handling

Fire Protection and Prevention

Ergonomics / Office and Administrative Workstation Safety

- **Elevated Work Platforms:** All lift training must be performed by a qualified trainer/supervisor and documented by model. Training plans must include classroom and hands-on proficiency training, inspection requirements, hazard recognition, safety devices, workplace/site inspection, spotter duties, written testing, and model-specific authorization. Only allow operation by personnel proficient in the operation, safe use, and inspection of the specific platform being used. If a personal fall arrest system is part of the setup, train users on safe system use before first use and after system changes. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards Chapter 16
- **Forklift / Material Handling Equipment:** MHE training must follow equipment-specific lesson plans with formal instruction, hands-on demonstrations, exercises, and evaluation. Around aircraft, only licensed drivers will operate forklifts and hi-lift trucks, special training is required for hi-lift operators, and spotters must be used when maneuvering close to aircraft or raising and lowering cargo beds. Ensure each operator is trained and evaluated before operating independently. Training must combine formal instruction, practical training, and workplace evaluation, cover truck-specific and site-specific hazards, and include refresher training after unsafe operation, incidents, assignment to a different truck, or workplace changes. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards Chapter 35; 29 CFR 1910.178 - Powered industrial trucks
- **Ladder Safety:** Personnel using ladders at any working height must be trained when first assigned, and that training must include hands-on instruction covering ladder defects, electrocution hazards, positioning, and placement for various job sites. Training must be documented under DAFI 91-202. Use local ladder lesson plans, manufacturer instructions, and AF walking-working surface guidance. OSHA 2254 (2015 edition) does not provide a dedicated general-industry ladder training summary in the same way it does for lockout, forklifts, or confined spaces, so this remains primarily AF/local-driven. Common local training item often broken out separately with fixed and portable ladder rules
- **Manual Lifting and Material Handling:** Supervisors must ensure thorough training on proper manual lifting techniques, required PPE, and the use of manual lifting devices. Training must use both verbal and written materials, include practice on proper motions, and be documented under DAFI 91-202. Cover shop-specific lifting limits, two-person lift triggers, hand truck and lifting-device use, and when

supervisors require assisted handling. No direct OSHA 2254 standalone manual-lifting module is mapped here. Manual lifting techniques and available lifting devices

- **Fire Protection and Prevention:** Facility managers and supervisors must establish and maintain a fire prevention training program through the JSTO so employees understand their fire prevention and protection responsibilities in their work areas. This is fulfilled through job safety training and documentation under DAFI 91-202. Review the fire prevention plan with employees when the plan is developed, when responsibilities change, and when the plan changes. If extinguishers are provided for employee use, train employees on the general principles of extinguisher use and the hazards of incipient-stage firefighting at initial assignment and at least annually. Train designated users on the specific equipment they are expected to use. Local extinguisher, pull station, and fire reporting procedures
- **Ergonomics / Office and Administrative Workstation Safety:** Use DAFMAN 91-203 office safety and ergonomics guidance to brief administrative and computer-based workers on musculoskeletal disorder risk factors, workstation adjustment, posture, repetitive motion controls, manual handling of office materials, and supervisor follow-up for ergonomic concerns. Cover workstation setup, chair adjustment, monitor height and distance, keyboard and mouse position, neutral posture, repetitive motion, micro-pauses or task variation, safe lifting of office supplies, file cabinet and storage safety, early reporting of discomfort, and how to request a BE ergonomic assessment when needed. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards; OSHA ergonomics guidance; local Bioenvironmental Engineering or Occupational Health guidance

Ergonomics Workstation Posture Guide:

Use this guide while briefing office and administrative workstation setup.

DAF TRAFFIC SAFETY PROGRAM

Reference: DAFI 91-207. Requirements of the DAF traffic safety program include mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, and vehicle training requirements.

Additionally, brief prohibition or restrictions on electronic-device use while operating vehicles on- or off-base, and discuss motorcycle safety training requirements before riding a motorcycle.

On-Base / Vehicle Operations

- Obey posted speed limits, traffic control devices, and local roadway rules.
- Use installed seat belts and occupant restraints as designed by the manufacturer.
- Use spotters while backing when required by local policy, task conditions, or vehicle type.
- Complete required GOV, GVO, golf cart, low-speed vehicle, or mission-specific vehicle training before operation.

Electronic Devices / Headphones

- Do not use non-hands-free electronic devices while operating a motor vehicle.
- Stop in a safe location before using a phone if hands-free operation is not available.
- Do not wear headphones or listening devices in ways that interfere with hearing traffic, alarms, or emergency warnings.

Motorcycle / ATV Safety

- Complete required motorcycle rider training before riding on a roadway.
- Wear required PPE including helmet, eye protection, gloves, protective clothing, and over-the-ankle footwear.

Pedestrian / Bicycle Awareness

- Use caution at crossings, follow traffic controls, and wear visibility gear when exposed to roadway hazards.
- Use required lighting and reflective equipment during darkness, reduced visibility, or inclement weather.

- Carry proof of required training when applicable and comply with state licensing requirements.

Local Traffic Hazards / Vehicle Notes:

Group Staff shall comply with the Joint Base Pearl Harbor-Hickam Traffic Program, JBPHHINST 5100.12A, regarding on-base traffic laws. Additionally, all personnel must observe applicable local and state traffic regulations.

Motorcycle Safety Representatives / Traffic Contacts:

TSgt Brett R. Majerus serves as the primary Group Motorcycle Representative. All training registration and course-specific inquiries are managed by the Joint Base Pearl Harbor-Hickam (JBPHH) Safety Office.

JBPHH Safety Office Training Contacts

For registration or specific questions regarding Motorcycle Safety Courses, please contact the JBPHH Safety Office personnel listed below:

Nicholas "Nick" Ruhl (Safety Supervisor) nicholas.m.ruhl.civ@us.navy.mil (808) 473-1163

Wallace "Wally" Bullard (Safety Specialist) wallace.k.bullard.civ@us.navy.mil (808) 473-1165

No GVO risk assessment files uploaded.

EMERGENCY INFORMATION

• Emergency Numbers:

Emergency

911

Hickam Base Security (Physical Security Protection)

(808) 449-1001
Federal Fire Department
808-471-3303

- **Medical Facility / Treatment:**

15th Medical Group
808-433-8850
Tripler Army Medical Center Emergency Room
808-433-6629

- **Evacuation / Muster Point:**

Review posted facility diagrams to identify the evacuation route and muster point for the assigned work area. For facilities with 10 or fewer employees, supervisors may provide oral emergency action plan briefings.

- **Shelter in Place:**

Supervisors will identify and brief personnel on designated Shelter-in-Place (SIP) locations within each work center.

- **Active Shooter Response Methods:**

RUN

- Evacuate the area immediately if a clear escape path exists.
- Leave belongings behind.
- Help others escape if possible, but evacuate regardless of others' actions.
- Prevent individuals from entering the area.

HIDE

- If evacuation is impossible, find a secure location out of the shooter's view.
- Lock and blockadedoors with heavy furniture.
- Silence all electronic devices and remain quiet.
- Stay behind large items(e.g., desks, cabinets) for protection.

FIGHT

- As a last resort, and only when life is in imminent danger.
- Attempt to incapacitate the shooter.
- Actwith physical aggression and throw items at the shooter.
- Commit to the action.

Call 911

- Dial 911 or base defense forces when safe to do so. Provide location, number of shooters, andphysical description

- **Adverse Weather Shelter:**

Seek immediate shelter upon adverse weather notification.

Emergency Evacuation Route:

Figure 11: Building 2035 Evacuation Plan/ Rally Points

EMERGENCY EQUIPMENT AND SAFETY BOARD

Safety Bulletin Board Location: Supervisors shall ensure all personnel are informed of the designated safety board location within the work center.

List fire pull stations, extinguishers, power cutoffs, eyewash stations, AEDs, foam systems, and any local fire/emergency equipment notes.

Emergency Equipment Maps / Photos:

Fire Escape Plan 624 RSG, Bldg 1050, JBPHH, HI

If exiting the building due to a fire, ensure the alarm pull is activated as you exit.
In an evacuation, meet in the parking lot behind building 1046 on B Street for accountability.

1050.png

DOCUMENTATION AND REVIEW

Document initial, refresher, and task-specific training in the work center record, review annually or when work conditions change, and maintain records per local records management requirements.

No DAF Form 1118 files uploaded.

No Bioenvironmental Workplace Survey uploaded.

Annual Review History:

Each annual review entry is shown in the table below.
