

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 621 Contingency Response Wing

Work Center: WSA

Office Symbol: Wing Staff

Supervisor: Mr. Stephen Henske, Director of Staff

Phone: DSN 650-2235

Reviewer: G.R. Moore

Review Date: 2026-05-21

Effective Date: 2026-06-01

WORK CENTER OVERVIEW

The 621 CRW Wing Staff Agency operates primarily within an administrative office environment. Personnel perform command support, legal, historical, public affairs, spiritual and advisory duties. The physical workspace consists of office suites, cubicles, conference rooms and standard administrative equipment (computers, copiers, paper shredders). Operations are generally conducted during standard duty hours.

REQUIRED TRAINING TOPICS

Workplace Hazards

Personal Protective Equipment

Emergency Action and Fire Prevention

Reporting Unsafe Conditions

Reporting Mishaps and Occupational Injury/Illness

CA-10 and LS-201

DAF Traffic Safety Program

DAFVA 91-209

DAFSMS Responsibilities

- **Hazards and controls:** Address task hazards, environmental hazards, governing instructions, and hierarchy of controls including elimination, engineering, substitution, and administrative controls.
- **PPE:** Cover required protective equipment, wear/use procedures, cleaning, maintenance, storage, disposal, and supervisor notification concerns.
- **Emergency response:** Cover emergency action, fire prevention, alarms, AEDs, extinguishers, evacuation, shelter, active shooter response, and emergency contact procedures.
- **Reporting:** Explain unsafe condition reporting, injury/illness reporting, DAF Form 457, SAFEREP access, and anti-retaliation protections.
- **Program awareness:** Include CA-10 / LS-201 location, traffic safety program requirements, DAFVA 91-209 location, and DAFSMS responsibilities.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

HIERARCHY OF HAZARD CONTROLS

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),
Deny (HIDE),
Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets
Shrapnel and secondary missiles
Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively and take action against the shooter. Improvise weapons from your surroundings and commit to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS FRAMEWORK

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Provides the structure for a proactive mishap prevention program through policy, active leadership engagement, and clearly defined responsibilities at every level.

Risk Management

Integrates hazard identification, assessment, and control decisions into daily operations to reduce mishaps and strengthen safety culture.

Assurance

Uses evaluations, monitoring, reviews, and data to confirm the mishap prevention program is implemented and improving over time.

Promotion, Education, and Training

Ensures Airmen and Guardians receive safety awareness information, embedded training, effective risk controls, and active engagement in mishap prevention.

1. Purpose. DAFSMS utilizes the four pillars and the DAFSMS framework to structure the mishap prevention program. Activities associated with each pillar set policy, identify and mitigate hazards and risk, and reduce the occurrence and cost of injuries, illnesses, fatalities, and property damage through continuous improvement and the PDCA model.

2. Policy and Leadership. Safety policy provides the structure for a sound and proactive mishap prevention program. Active leadership involvement in implementation and execution is critical at all levels of command.

3. Risk Management. Ensure the RM process is fully integrated into all safety-related activities to enhance mishap prevention and sustain a proactive safety culture. Refer to DAFI 90-802 and DAFPAM 90-803 for additional detail.

4. Assurance. Safety assurance is how commanders determine whether mishap prevention elements are implemented and guides continuous improvement through evaluation, monitoring, and review.

5. Promotion, Education, and Training. Ensure Airmen and Guardians are provided safety awareness information, organizations have embedded ongoing training into the mishap prevention program, effective risk controls are implemented, and personnel remain actively engaged.

SAFEREP

Report it on SAFEREP

HAZARDS ARE EVERYWHERE.

WHAT ARE **YOU** DOING TO PREVENT INJURY OR DEATH?

More info about SAFEREP
www.safety.af.mil/home/saferep

SAFEREP is the Department of the Air Force's (DAF) premiere digital safety reporting tool and mobile app. It allows Airmen and Guardians to easily report hazardous conditions, near-misses, unintentional errors, or safety concerns across all disciplines, including workplace, traffic, industrial, flight, weapons, and space safety, directly from their devices anytime and anywhere.

Fully integrated with the Air Force Safety Automated System (AFSAS), it replaces the earlier Airman Safety App and serves as the DAF's only fully digital safety reporting avenue. Users simply answer a short series of questions to submit reports that reach the appropriate Major Command (MAJCOM) safety office quickly and efficiently.

Key Benefits for Job Safety Training:

- **Empowers everyone:** Turns every Airman or Guardian into a proactive sensor for hazard identification, encouraging a strong safety culture where people feel comfortable speaking up without barriers like paperwork or word-of-mouth delays.
- **Prevents mishaps:** Enables early mitigation of risks before they lead to incidents, capturing minor events and near-misses that offer the greatest prevention potential.
- **Simple and accessible:** Mobile-first design makes reporting fast, more efficient than traditional methods, and available on the spot through the app on Google Play and the Apple App Store.
- **Broad coverage and integration:** Supports multiple safety areas and includes specialized features such as Aviation Safety Action Program reporting, improving visibility, tracking, and overall risk management across the force.

This tool strengthens operational readiness by fostering a proactive, data-driven approach to safety. You can download it from the app stores or access it through the official SAFEREP site for more details.

REPORTING UNSAFE EQUIPMENT, CONDITIONS, OR PROCEDURES

Employees must report unsafe equipment, conditions, or procedures to their supervisor immediately. This includes any hazard that could injure personnel, damage equipment, or create an unsafe work process.

Personnel must also be notified that unsafe conditions, work-related injuries, and illnesses may be reported **without fear of retaliation**. Immediate supervisor involvement remains the primary reporting path, with SAFEREP and formal hazard-report channels available when needed.

What To Report

- Unsafe equipment that is broken, damaged, unserviceable, or missing required guards or controls.
- Unsafe conditions or procedures that create a hazard to personnel, operations, or facilities.
- Work-related injuries, illnesses, near-misses, and hazards needing immediate attention.

Immediate Actions

- Notify the supervisor or responsible area lead immediately.
- If the hazard can be safely controlled, stop use and isolate the equipment or area until corrected.
- If the danger is imminent to life or health, evacuate the area and activate emergency response procedures.

Tag use examples: Use the appropriate danger, caution, out-of-order, or do-not-start tag to keep unsafe equipment out of service until the hazard has been corrected and the responsible supervisor authorizes return to use.

Escalation: If the issue cannot be resolved at the lowest level, elevate it through the unit safety representative, DAF Form 457 process, or SAFEREP as appropriate.

LOCAL MISHAP / HAZARD REPORTING PROCEDURES

No local mishap or hazard reporting procedures uploaded.

USE OF PORTABLE FIRE EXTINGUISHERS

Portable fire extinguishers are intended for small, incipient-stage fires only. Personnel should use an extinguisher only when they have been trained, the fire is small and contained, the correct extinguisher is available, and there is a clear evacuation path behind them.

Use the **PASS** method when operating a portable fire extinguisher: **Pull** the pin, **Aim** at the base of the fire, **Squeeze** the handle, and **Sweep** side to side.

If the fire grows, smoke conditions worsen, or the extinguisher does not control the fire immediately, evacuate the area, activate the local emergency response process, and report the incident to emergency services and supervision.

WORK AREA HAZARD ANALYSIS

Summarize work area hazards, BE survey items, JHAs, JSAs, and other written guidance that support this JSTO.

RISK MANAGEMENT FUNDAMENTALS

Reference: DAFSMS and local RM program guidance.

Address hazard identification, control selection, local escalation expectations, and when RM refresher training must be completed for this work center.

Because the WSA comprises diverse, mostly office-based and support-oriented work centers (such as Command Staff, JAG, Finance, Public Affairs, and Chaplain) that still deploy or support rapid-response exercises, this block focuses on applying Risk Management (RM) to our specific daily tasks and deployment support roles.

Every member must understand the Air Force 5-step RM process. We apply these fundamentals to everyday tasks like office ergonomics, safe material handling, electrical safety in command staff areas, and planning wing-level exercises.

Supervisors must ensure that both the initial RM Fundamentals and the Annual Refresher Training are completed and officially logged on this JSTO. If our work center operations change, or if a member exhibits a lack of understanding of safe practices, immediate remedial training must be conducted and documented.

JOB SPECIFIC TRAINING ITEMS

Bloodborne Pathogens

CPR Training

Ergonomics / Office and Administrative Workstation Safety

Manual Lifting and Material Handling

Fire Protection and Prevention

Thermal Stress / Heat and Cold Stress

Active Shooter Response

Ladder Safety

- **Bloodborne Pathogens:** Any person whose duties involve reasonably anticipated exposure to blood or other potentially infectious material must be trained and enrolled in the Bloodborne Pathogen Program. Supervisors of affected workplaces must establish a written exposure control plan and conduct training. Train exposed employees at initial assignment and at least annually, with additional training when tasks or procedures create new exposure. Cover disease signs and transmission, the exposure control plan, task recognition, engineering controls, work practices, PPE use and disposal, and Hepatitis B vaccine information. 29 CFR 1910.1030 - Bloodborne Pathogens

Link to training:

<https://usaf.dps.mil/p/r/teams/WSAAssignedSafetyTraining/Shared%20Documents/WSA%20Assigned%20Safety%20Training/06%20Blood%20d=wa115be8c2ab14131b3f4dae6159c948f&csf=1&web=1&e=FtHpNw>

- **CPR Training:** Initial first aid and CPR training must be completed before assigning duties that require it, refresher training must occur before certification expires, and CPR training must include PAD instruction. Remote or high-risk work must have an immediate medical response plan. Where work conditions require trained first-aid responders, ensure personnel are adequately trained and available. OSHA 2254 links first-aid and CPR availability to certain work settings, but local mission risk and AF requirements should define who must hold current CPR credentials. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards Chapter 1

- **Ergonomics / Office and Administrative Workstation Safety:** Use DAFMAN 91-203 office safety and ergonomics guidance to brief administrative and computer-based workers on musculoskeletal disorder risk factors, workstation adjustment, posture, repetitive motion controls, manual handling of office materials, and supervisor follow-up for ergonomic concerns. Cover workstation setup, chair adjustment, monitor height and distance, keyboard and mouse position, neutral posture, repetitive motion, micro-pauses or task variation, safe lifting of office supplies, file cabinet and storage safety, early reporting of discomfort, and how to request a BE ergonomic assessment when needed. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards; OSHA ergonomics guidance; local Bioenvironmental Engineering or Occupational Health guidance

Link to training:

<https://usaf.dps.mil/p/r/teams/WSAAssignedSafetyTraining/Shared%20Documents/WSA%20Assigned%20Safety%20Training/05%20Ergonomics%20d=we23793bc44a5486f9d54ed35dd4b5c33&csf=1&web=1&e=vdReKQ>

- **Manual Lifting and Material Handling:** Supervisors must ensure thorough training on proper manual lifting techniques, required PPE, and the use of manual lifting devices. Training must use both verbal and written materials, include practice on proper motions, and be documented under DAFI 91-202. Cover shop-specific lifting limits, two-person lift triggers, hand truck and lifting-device use, and when supervisors require assisted handling. No direct OSHA 2254 standalone manual-lifting module is mapped here. Manual lifting techniques and available lifting devices
- **Fire Protection and Prevention:** Facility managers and supervisors must establish and maintain a fire prevention training program through the JSTO so employees understand their fire prevention and protection responsibilities in their work areas. This is fulfilled through job safety training and documentation under DAFI 91-202. Review the fire prevention plan with employees when the plan is developed, when responsibilities change, and when the plan changes. If extinguishers are provided for employee use, train employees on the general principles of extinguisher use and the hazards of incipient-stage firefighting at initial assignment and at least annually. Train designated users on the specific equipment they are expected to use. Local extinguisher, pull station, and fire reporting procedures

Link to training:

<https://usaf.dps.mil/p/r/teams/WSAAssignedSafetyTraining/Shared%20Documents/WSA%20Assigned%20Safety%20Training/09%20Means%20d=wdfccaf866084d2e8b29c18b6b6cf36b8&csf=1&web=1&e=qjGTZg>

- **Thermal Stress / Heat and Cold Stress:** Use the occupational health risk assessment, local BE recommendations, and supervisor hazard controls to brief personnel on thermal stress hazards and controls for hot, cold, humid, outdoor, flight line, industrial, or PPE-intensive work areas. Cover heat stress, cold stress, WBGT or locally directed exposure monitoring, acclimatization, hydration, work/rest cycles, buddy checks, PPE or clothing considerations, symptom recognition, supervisor notification, and emergency response actions for suspected heat illness or cold injury. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards; DAFI 48-145 - Occupational and Environmental Health Program; local Bioenvironmental Engineering or Occupational Health guidance
- **Active Shooter Response:** Tie this to the local emergency action plan, shelter/lockdown locations, notification methods, and commander-directed response procedures. Local emergency response briefing and lockdown procedures
- **Ladder Safety:** Personnel using ladders at any working height must be trained when first assigned, and that training must include hands-on instruction covering ladder defects, electrocution hazards, positioning, and placement for various job sites. Training must be documented under DAFI 91-202. Use local ladder lesson plans, manufacturer instructions, and AF walking-working surface guidance. OSHA 2254 (2015 edition) does not provide a dedicated general-industry ladder training summary in the same way it does for lockout, forklifts, or confined spaces, so this remains primarily AF/local-driven. Common local training item often broken out separately with fixed and portable ladder rules

DAF TRAFFIC SAFETY PROGRAM

Reference: DAFI 91-207. Requirements of the DAF traffic safety program include mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, and vehicle training requirements. Additionally, brief prohibition or restrictions on electronic-device use while operating vehicles on- or off-base, and discuss motorcycle safety training requirements before riding a motorcycle.

On-Base / Vehicle Operations

- Obey posted speed limits, traffic control devices, and local roadway rules.
- Use installed seat belts and occupant restraints as designed by the manufacturer.
- Use spotters while backing when required by local policy, task conditions, or vehicle type.
- Complete required GOV, GVO, golf cart, low-speed vehicle, or mission-specific vehicle training before operation.

Electronic Devices / Headphones

- Do not use non-hands-free electronic devices while operating a motor vehicle.
- Stop in a safe location before using a phone if hands-free operation is not available.
- Do not wear headphones or listening devices in ways that interfere with hearing traffic, alarms, or emergency warnings.

- Complete required motorcycle rider training before riding on a roadway.
- Wear required PPE including helmet, eye protection, gloves, protective clothing, and over-the-ankle footwear.
- Carry proof of required training when applicable and comply with state licensing requirements.

- Use caution at crossings, follow traffic controls, and wear visibility gear when exposed to roadway hazards.
- Use required lighting and reflective equipment during darkness, reduced visibility, or inclement weather.

Local Traffic Hazards / Vehicle Notes:

Enter local gate hazards, base-specific traffic concerns, spotter rules, and where vehicle training is documented.

No GVO risk assessment files uploaded.

EMERGENCY INFORMATION

• Emergency Numbers:

Dial 911 for all emergencies

JBMDL Police (non-emergency) 609-754-6001

Inclement Weather: 609-754-BASE (2273)

• Medical Facility / Treatment:

87th Medical Group (non-emergency) 609-754-9091

• Evacuation / Muster Point:

Primary Muster Point: Parking lot of 1928

Alternate Muster Point: Across from 1903 (621 AMOS)

• Shelter in Place:

Not entered

• Active Shooter Response Methods:

Not entered

• Adverse Weather Shelter:

Not entered

No evacuation route image uploaded.

EMERGENCY EQUIPMENT AND SAFETY BOARD

Safety Bulletin Board Location: North hallway between male and female restrooms.

1907 is equipped with an automatic wet type sprinkler system. In event a smoke detector is activated, audible alarms and strobes will activate.

Fire alarm pull stations are locatd at each ingress and egress location.

Portable ABC fire exintuishers are located throughout the first floor.

No emergency equipment maps or photos uploaded.

DOCUMENTATION AND REVIEW

Training will be documented on the DAF Form 55 as well as on a locally generated excel spreadsheet.

No DAF Form 1118 files uploaded.

No Bioenvironmental Workplace Survey uploaded.

Annual Review History:

Each annual review entry is shown in the table below.
