

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 432 SPTS

Work Center: CEF

Work Area / Office Symbol: Fire Department / HSO

Phone: 702-404-2231

Supervisor: Ramon Fitzgerald / GS-13 / Fire Chief

Reviewer: Abel Salas

Review Date: 2026-08-03

Effective Date: 2026-08-03

Work Center Overview

The Fire and Emergency Services (F&ES) Flight operates 24/7/365 to provide rapid, comprehensive emergency response, including structural fire suppression, Aircraft Rescue and Firefighting (ARFF), hazardous materials (HAZMAT) response, technical rescue, and emergency medical services (EMS). Personnel maintain constant combat and emergency readiness while performing daily vehicle maintenance, equipment testing, facility fire prevention inspections, and rigorous physical and tactical training. Operating in a highly dynamic, industrial, and high-hazard environment, this work center is dedicated to protecting life, property, and mission-critical assets across the installation.

Work Area Hazard Analysis / JHA Notes

A comprehensive Job Hazard Analysis (JHA) must address diverse operational risks. Personnel face environmental hazards like seasonal heat and flooding, alongside facility-specific dangers such as faulty electrical equipment, wet floors, high noise, and poor air quality, which are mitigated through regular inspections and mandatory PPE. Highway operations introduce significant risks from managing large

apparatus in high-speed traffic and adverse conditions, requiring strict adherence to vehicle placement and safety protocols. Furthermore, emergency medical responses present a primary hazard of exposure to contagious diseases and bloodborne pathogens. This risk is controlled by the mandatory use of specific PPE—including high-risk surgical gloves and eye protection—and adherence to stringent decontamination procedures.

Required Training Topics

Workplace Hazards
Personal Protective Equipment
Emergency Action and Fire Prevention
Reporting Unsafe Equipment, Conditions, or Procedures
Mishap, Occupational Injury, and Illness Reporting
CA-10 and LS-201
DAF Traffic Safety Program
DAFVA 91-209 Location and Content
DAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

HIERARCHY OF **HAZARD CONTROLS**

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control
- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

No job-specific modules selected yet.

No modules selected

References

Foundational workplace safety and JSTO development requirements are mandated by DAFI 91-202 (The US Air Force Mishap Prevention Program), DAFMAN 91-203 (Air Force Occupational Safety, Fire, and Health Standards), and federal OSHA standards under Title 29 CFR § 1910. Operational guidelines, training, and emergency response parameters are dictated by AFMAN 32-1007 (Fire and Emergency Services Flight Operations), alongside overarching DoD policy defined in DoDI 6055.06 and DoDM 6055.06, which ensure adherence to National Fire Protection Association (NFPA) professional qualifications. Furthermore, due to the high-hazard nature of firefighting and medical response, strict occupational health directives apply; these include DAFI 48-137 for the Respiratory Protection Program (governing SCBA use), AFI 48-127 for the Occupational Noise and Hearing Conservation Program, and 29 CFR § 1910.1030 to ensure compliance with Bloodborne Pathogens standards.

Required Documents

- [CA-10](#)
What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.
- [DAF Form 457](#)
Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or

procedures in the workplace.

- [DAFVA 91-209](#) **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations.
Location Posted: Enter where DAFVA 91-209 is posted for this work center.
- [LS-201](#)
Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** Agency / Service Commercial Phone DSN

Emergency (Landline) 911 911

Emergency (Cell Phone) (702) 404-0911 N/A

Base Defense Ops Center BDOC (702) 404-3333 DSN 384-3333

Fire Dispatch (Non-Emergency) (702) 404-0214 / 0213 DSN 384-0214

- **Medical Facility / Treatment:** The Hunters Medical Clinic (Bldg 1033) serves as the primary medical facility on Creech AFB, providing Flight Medicine, Family Health, and outpatient services during duty hours (Monday–Friday). On-base emergencies requiring immediate medical treatment are handled by calling 911 (or 702-404-0911 from a cell phone) to initiate a response from the clinic's localized ambulance service. For acute or after-hours emergencies, patients are transported to the 24/7 Emergency Department at Mike O'Callaghan Military Medical Center on Nellis AFB or local civilian trauma facilities. Active-duty personnel requiring standard medical treatment must utilize scheduled appointments or the designated morning flight medicine sick call, and they must contact the Nurse Advice Line for off-base urgent care referrals to avoid unauthorized billing.
- **Evacuation / Muster Point:** According to the emergency procedures outlined in your JSTO, personnel will evacuate to designated assembly points, ensuring they evacuate all fire vehicles and apparatus from the bays only if it is safe to do so. For personnel in Building 1150, the muster point is the parking lot located to the west of the main entrance. For personnel in Building 85, the evacuation point is the theater parking lot (Bldg. 39). All individuals must remain at their designated assembly point until formally cleared to leave by Senior Fire Officer.
- **Shelter in Place:** Not entered
- **Active Shooter Response Methods:** Not entered
- **Adverse Weather Shelter:** Not entered

No evacuation route image uploaded.

Emergency Equipment and Safety Board

Safety Bulletin Board Location: Not entered

List fire pull stations, extinguishers, power cutoffs, eyewash stations, AEDs, foam systems, and any local fire/emergency equipment notes.

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:

Enter local gate hazards, base-specific traffic concerns, spotter rules, and where vehicle training is documented.

Motorcycle Safety Representatives / Traffic Contacts:

List unit or group motorcycle safety representatives, traffic safety contacts, and local rider briefing requirements.

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.
