

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 33rd MXS/MXMG

Work Center: AGE Shop

Work Area / Office Symbol: MXS/MXMG

Phone: 850-883-4189

Supervisor: MSgt Miklacic

Reviewer: Ssgt Hazel

Review Date: 2026-07-15

Effective Date: 2026-07-15

Work Center Overview

The 33rd Maintenance Squadron (33 MXS) AGE Flight is responsible for the inspection, maintenance, servicing, and delivery of powered and non-powered support equipment.

Work Area Hazard Analysis / JHA Notes

Summarize JHA findings, BE survey notes, major hazards, controls, and special restrictions for this work center.

Required Training Topics

Workplace Hazards
Personal Protective Equipment
Emergency Action and Fire Prevention
Reporting Unsafe Equipment, Conditions, or Procedures
Mishap, Occupational Injury, and Illness Reporting
CA-10 and LS-201
DAF Traffic Safety Program
DAFVA 91-209 Location and Content
DAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control
- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

The following modules apply to this work center and should be reviewed with trainees before task performance.

Hazardous Energy Control Hazard Communication Bloodborne Pathogens Hearing Conservation Confined Space Program Manual and Powered Hoists Respiratory Protection Program Fall Arrest Systems Forklift / Material Handling Equipment CPR Training Flight Line Driving Fetal Protection Program Laser Safety Training Ladder Safety Active Shooter Response Government Vehicle / Utility Vehicle Use Manual Lifting and Material Handling Fire Protection and Prevention Jewelry / Loose Articles Restrictions Personal Protective Equipment (PPE)

- **Hazardous Energy Control:** Document initial and refresher training when job assignments, machines, processes, or energy control procedures change, or when inspections show employee knowledge gaps. Train authorized employees to recognize hazardous energy sources, the type and magnitude of energy present, and the methods and means for isolation and control. Train affected employees on the purpose and use of lockout/tagout procedures, and instruct all other employees on the prohibition against restarting locked or tagged equipment. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 21; 29 CFR 1910.147 - The control of hazardous energy (lockout/tagout)
- **Hazard Communication:** Provide HazCom training upon initial assignment, whenever a new chemical hazard is introduced, and when new tasks expose workers to different hazardous materials. Ensure workers know how to access local SDS information and labeling guidance. Train personnel on hazardous chemicals in their work area, labeling systems, safety data sheets, and the measures they can take to protect themselves during normal operations and foreseeable emergencies. DAFI 90-821; 29 CFR 1910.1200 - Hazard Communication

- **Bloodborne Pathogens:** Enroll applicable workers in the local bloodborne pathogens program and ensure exposure control plan requirements, reporting actions, and PPE procedures are covered before task performance. Provide bloodborne pathogens training at initial assignment and at least annually thereafter, covering exposure control, modes of transmission, and protective measures. 29 CFR 1910.1030 - Bloodborne Pathogens
- **Hearing Conservation:** Ensure workers enrolled in hearing conservation understand noise hazard areas, double-hearing protection requirements, and local follow-up actions tied to occupational health evaluations. Train noise-exposed employees annually on the effects of noise, the purpose of hearing protectors, the advantages and disadvantages of various protectors, and the purpose of audiometric testing. DAFI 48-127; 29 CFR 1910.95 - Occupational noise exposure
- **Confined Space Program:** Provide duty-specific training for permit-required confined space roles, including monitor use, atmospheric hazards, entry permits, and rescue responsibilities before personnel participate in entries. Train entrants, attendants, supervisors, and rescue personnel so they understand their duties, hazards, signs and symptoms of exposure, communication procedures, and emergency actions before assignment. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 23; 29 CFR 1910.146 - Permit-required confined spaces
- **Manual and Powered Hoists:** Use local lesson plans or manufacturer instructions to cover pre-use inspections, operator limitations, suspended-load controls, and maintenance reporting requirements. Provide task-specific training on safe use, load limits, inspections, and operating procedures before workers use hoists in material handling operations. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 35
- **Respiratory Protection Program:** Document fit testing and occupational health training on AF Form 2767 and ensure wearers understand emergency-use limits, cartridge change-out, cleaning, and medical qualification requirements. Train users before respirator use and at least annually on why the respirator is necessary, how improper fit or maintenance can compromise protection, and how to inspect, don, doff, use, and store the respirator. DAFI 48-137; 29 CFR 1910.134 - Respiratory protection
- **Fall Arrest Systems:** Cover anchorage selection, rescue planning, and equipment inspections before personnel use personal fall arrest systems in assigned tasks. Train employees exposed to fall hazards to recognize fall hazards and the procedures to minimize them, including use and inspection of fall arrest systems. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 13; 29 CFR 1910.66 - Powered platforms for building maintenance; 29 CFR 1926.503 - Training requirements
- **Forklift / Material Handling Equipment:** Use approved lesson plans, hands-on evaluation, and recurring reevaluation before certifying operators. Cover spotter requirements, aircraft proximity rules, and local route restrictions. Train powered industrial truck operators in truck-related and workplace-related topics, evaluate performance, and conduct refresher training when unsafe operation, incidents, or workplace changes occur. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 35; 29 CFR 1910.178 - Powered industrial trucks
- **CPR Training:** Ensure designated responders maintain current certification and understand location and use of local AED assets under the unit mishap prevention program. Provide CPR and AED training before assignment where required, and refresh qualification before expiration. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 1
- **Flight Line Driving:** Use installation or unit-approved training and certification for airfield/fight line operations, to include local speed, spotter, and no-lone-zone requirements. Provide local flight line driving rules, markings, vehicle lighting requirements, restricted areas, and aircraft hazard awareness before granting driving privileges. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 24
- **Fetal Protection Program:** Use occupational and environmental health guidance to discuss declaration options, exposure review, and local work restriction procedures. Provide job-specific hazard awareness for reproductive health risks where occupational exposures may affect pregnant workers or fetuses. DAFMAN 48-146

- **Laser Safety Training:** Use local laser safety officer guidance and approved operating instructions to cover exposure limits, alignment procedures, and emergency actions. Provide laser hazard awareness, eyewear, posting, alignment, and beam-control training before personnel work with lasers or enter laser-controlled areas. DAFI 48-139
- **Ladder Safety:** Provide hands-on ladder safety training at first assignment, including local storage, damaged-tag procedures, and fall prevention expectations. Train workers to inspect ladders before use, maintain three points of contact, set ladders on stable surfaces, and avoid overreaching or using damaged ladders. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 7
- **Active Shooter Response:** Use local emergency response procedures, shelter locations, and mass notification methods applicable to the duty location. Brief personnel on how to recognize an active shooter event, how to summon help, and how to apply local run-hide-fight guidance based on the facility layout. Installation emergency management guidance / local procedures
- **Government Vehicle / Utility Vehicle Use:** Brief operators on unit-specific government vehicle training requirements, local route restrictions, low-speed vehicle rules, and documentation of qualification. Train vehicle operators on seat belts, speed limits, local traffic hazards, spotter use while backing, and restrictions on electronic device use while driving. DAFI 91-207; local procedures
- **Manual Lifting and Material Handling:** Provide verbal and written guidance on manual lifting, lifting devices, and local reporting actions for strain or overexertion symptoms. Train workers on proper lifting techniques, team lifting, load assessment, and use of lifting aids to reduce musculoskeletal injury risk. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 20
- **Fire Protection and Prevention:** Use the JSTO and local fire prevention plan to brief workers on work-center fire hazards, alarm reporting, extinguisher use, and evacuation accountability. Train personnel on fire hazards, reporting procedures, extinguisher locations, evacuation routes, pull stations, and local emergency response actions. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards; local fire prevention plan
- **Jewelry / Loose Articles Restrictions:** Use local work-center restrictions and equipment guidance to define prohibited items and exceptions for mission-essential tasks. Train workers on removing jewelry and securing loose articles when working around machinery, electrical hazards, rotating equipment, or snag hazards. Local procedures / equipment guidance
- **Personal Protective Equipment (PPE):** Use the work-center JHA, BE occupational health assessment, manufacturer instructions, DAFMAN 91-203 Chapter 14, and local safety office guidance to identify PPE requirements. Supervisors must ensure PPE is provided, used, cleaned, inspected, maintained in sanitary and serviceable condition, and documented in JSTO training records. Cover eye and face protection, head protection, foot protection, hand protection, protective clothing, and respiratory or hearing protection when those programs apply. Train each affected worker on when PPE is necessary, what PPE is necessary, how to properly don, doff, adjust, and wear PPE, the limitations of assigned PPE, and the proper care, maintenance, useful life, and disposal of PPE. Require workers to demonstrate understanding and proper use before performing work requiring PPE, and retrain when workplace conditions, job assignments, PPE types, or worker knowledge gaps make prior training obsolete. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 14; 29 CFR Part 1910 - Occupational Safety and Health Standards (General Industry Standards) Subpart I; 29 CFR 1910.132; 29 CFR 1910.133; 29 CFR 1910.135; 29 CFR 1910.136; 29 CFR 1910.138

Ergonomics Workstation Posture Guide:

Use this guide while briefing office and administrative workstation setup.

Required Documents

- [CA-10](#)
What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.
- [DAF Form 457](#)
Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or procedures in the workplace.
- [DAFVA 91-209](#) **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations.
Location Posted: Safety bulletin board outside of PC
- [LS-201](#)
Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** 911
- **Medical Facility / Treatment:** The base hospital is located on Boatner Road, building 2825. All active duty military personnel and Air Force civilian personnel are authorized to use the hospital for emergency treatment. Tri-Care eligibility and enrollment in the most advantageous plan for your situation will affect the availability of treatment for your civilian dependents (if applicable).

For appointments call-
Central Appointments: 883-8600
Dental Appointments: 883-8600

- **Evacuation / Muster Point:** Evacuate out one of the Exit doors towards the North or South side of the building and muster in the parking lot at building 1354
- **Shelter in Place:** Storm in place shelter location is at LO's CTK
- **Active Shooter Response Methods:** Before the Incident:

Know your surroundings:
Identify the two nearest exits in any building you use Eglin Air Force Base.

Familiarize yourself with evacuation and lockdown procedures.

Prepare emergency kits for vehicles and workplaces.

Understand local warning systems and have a family communication plan.

Trust your instincts — if something feels wrong, remove yourself from the area if safe.

During the Incident
1. Escape if possible

Evacuate immediately if a safe route exists.

Leave belongings behind and help others escape if possible.

Once safe, call 911 and follow operator instructions and prevent others from entering the danger area if safe.

2. Barricade if escape isn't possible

Find a location that offers protection, limits visibility, and allows movement.

Lock or block doors with heavy furniture, turn off lights, cover windows, and remain quiet.

Silence phones and other devices that could reveal your location.

If safe, contact emergency services and stay on the line until instructed otherwise

3. Fight as a last resort

Only attempt to incapacitate the shooter if your life is in imminent danger.

Act decisively and commit to your actions

Post-Incident:

Follow law enforcement instructions until the situation is under control.

Drop items in your hands (bags, jackets) and keep hands visible.

Raise hands and spread fingers to avoid being perceived as threatening.

Do not point, scream, or move quickly toward officers

Eglin-Specific Tactics:

Eglin's Rescue Task Force has adopted a rapid victim removal strategy to address delays in traditional lockdown-and-secure protocols. This allows firefighters escorted by armed security forces to enter incrementally to remove wounded individuals quickly, reducing the risk of death while waiting for full lockdown.

Key Reminders

Stay calm and act quickly.

Help others — people often follow the lead of employees or managers.

Do not attempt to move the wounded unless you are trained and it is safe

- **Adverse Weather Shelter:** Adverse weather shelter is located in LO CTK

No evacuation route image uploaded.

Emergency Equipment and Safety Board

Safety Bulletin Board Location: The AGE Flights Safety bulletin board is located in Bldg. 1352 Bay 1, directly outside PC. The information on these boards should be reviewed periodically to keep you abreast of any new safety requirements, procedures, and general safety information.

List fire pull stations, extinguishers, power cutoffs, eyewash stations, AEDs, foam systems, and any local fire/emergency equipment notes.

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:

- ▮ JSTO Traffic & Motorcycle Safety Checklist (DAFI 91-207 & Eglin AFB)

- ▮ General Vehicle Operations Checklist:

Seat Belts: Verify that all occupants are buckled in before placing any vehicle in motion (mandatory for all GMVs/PMVs).

Speed Limits: Adhere strictly to posted limits; adjust speeds downward for weather, low visibility, or wet roads.

Spotters while Backing: Ensure a designated spotter is utilized when backing any GMV with restricted rear visibility; stop immediately if you lose sight of the spotter.

Vehicle Training: Complete all licensing and training requirements (including AFMAN 24-306 standards) before operating specialized or government vehicles.

Electronic Devices: Do not use hand-held electronic devices (for texting, emailing, or calling) while operating a vehicle on- or off-base.

▮ Motorcycle Safety & Training Milestones

MSR In-Processing: Report immediately to your Unit Motorcycle Safety Representative (MSR) upon unit arrival.

Initial Unit Briefing: Receive your commander's motorcycle safety briefing within 30 duty days of arrival.

Initial MSF Training: Complete an approved Motorcycle Safety Foundation (MSF) Basic RiderCourse (BRC) before riding.

Intermediate Training: Complete follow-on training (e.g., MSF Advanced RiderCourse) within 1 year of completing the initial course.

Refresher Training: Maintain currency by completing refresher training at least every 5 years (or every 3 years depending on MAJCOM requirements).

Mandatory PPE: Ensure the use of all required PPE: DOT-approved helmet, impact-resistant eye protection, long sleeves, sturdy pants, full-finger gloves, and over-the-ankle boots.

△ Eglin AFB Local Hazards Watch-Outs

Wildlife Crossings: Scan road shoulders continuously on Hwy 85, Hwy 20, and Hwy 285 for deer and wild boars, especially during dawn and dusk.

Tourist Traffic: Maintain extreme vigilance on Hwy 98 and the Mid-Bay Bridge for unfamiliar/distracted drivers making sudden lane changes.

Hydroplaning Risks: Reduce speed during heavy Gulf Coast rainstorms to prevent hydroplaning on pooled highway water.

Bridge Icing: Exercise extreme caution on overpasses and bridges during winter freezes, as they are highly susceptible to black ice.

Commuter Bottlenecks: Anticipate sudden stops and high congestion on high-speed approach roads to base Entry Control Points (ECPs) during peak hours.

Motorcycle Safety Representatives / Traffic Contacts:

SSgt Ethan Reisner (PRIMARY)

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.
