

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 169th Maintenance Squadron

Work Center: Fuel Shop

Work Area / Office Symbol: MXMCF

Phone: 803-647-8498

Supervisor: Ryan Addington/TSgt/Fuel Systems

Reviewer: Ryan Addington

Review Date: 2026-07-21

Effective Date: 2026-07-21

Work Center Overview

This outline covers mandatory briefing items required by the Air Force and McEntire Joint National Guard Base safety and health programs. It does not cover required training for participation in specialized safety programs such as confined space, hazardous energy control (lockout/tag out), ladder safety, ALARA, and others. Such training must be provided by the supervisor or through formal training. Training items for confined space, hazardous energy control and hazard communication in this outline cover general awareness training for all employees or describe how more in depth training will be provided. For additional examples of specialized safety programs see the table at TAB 14.1.3. Job Specific Items in this notebook.

Supervisors are required to review this job safety training guide annually and update whenever there is a change in equipment, procedures, processes or safety, fire protection, and health requirements. Provide this briefing prior to the employees beginning work, or whenever there is a change in equipment, procedures, hazards or the work environment.

Work Area Hazard Analysis / JHA Notes

14.1.2.4. Requirements for reporting unsafe equipment, conditions or procedures to supervisor immediately. Procedures must include notification to employees that reporting unsafe conditions or work related injury or illnesses can be reported without fear of retaliation. (T-0)

14.1.2.4.1. Purpose and location of AF Form 457, USAF Hazard Report. (T-1)

14.1.2.4.2. Purpose and means to access the ASAP process. (T-1)

Supervisors brief reporting unsafe equipment, conditions, or procedures

You should immediately report ALL unsafe equipment, conditions and/or procedures in your work area to your supervisor. If you see something that's unsafe don't overlook it and hope someone else sees it and fixes it. Get involved! If you can correct the hazard, do so, and then inform your supervisor of the situation. Remember SAFETY is EVERYONE'S responsibility!

IMMINENT DANGER and KNOCK IT OFF!!

IMMINENT DANGER-is any hazard or procedure that poses immediate risk to life or limb of any person in the work place. Any employee at McEntire JNGB that feels an imminent danger situation exists or could develop is REQUIRED to call "KNOCK IT OFF!!" assertively and persistently. At that point the supervisor or lead worker on the scene will take the following steps:

1. Bring the work to a halt as safely and quickly as possible.
2. Identify the perceived hazard with the help of the work crew.
3. Discuss the safeguards that need to be implemented to accomplish the task.
4. Determine the new course of action and make sure all employees understand the new procedures.
5. Resume the task.

It is the individual's responsibility to report any unsafe equipment, condition, or procedure to the supervisor!

Note: Only qualified employees will perform maintenance on damaged equipment. Damaged equipment will be identified with the appropriate tag, and locked out and tagged out if applicable.

WHAT TO REPORT

WHO TO REPORT TO / INTERIM CORRECTIONS

a. Equipment:

Use of Danger Tags

All unserviceable equipment shall be tagged and removed from service. If the item cannot be located where it will not present a safety hazard the item will be tagged with an appropriate tag. (see below).

b. Conditions or Procedures:

If you discover a condition or procedure that poses a safety hazard to yourself or others, notify the supervisor of the area immediately. If you cannot find the supervisor, notify the next person in their chain of command until someone is notified. Notify your Unit Safety Representative, There are also several means to identify safety hazards and suggest corrective actions such as AFTO Form 22 and AF Form 1000 programs. Elevate concerns up both the management and safety levels if you are not satisfied that corrective action removed the unsafe condition.

c. Reporting Unsafe Equipment or Conditions:

Contact the area supervisor. Always try to resolve problems at the lowest possible level. If you are not satisfied with the supervisor's action complete an AF Form 457, USAF Hazard Report and give it to the Wing Safety Personnel.

The AF Form 457s are located on each Safety Bulletin Board

Detecting unsafe or unhealthful working conditions at the earliest possible time and correcting hazards promptly at the lowest possible working level are essential elements of the AFOSH program. The hazard-reporting program provides a system of reporting hazardous conditions and for investigating and correcting those hazards. Any person assigned, attached, or under contract to the Air Force may report a hazard. Submit a hazard report (HR) on any event or condition that affects flight, ground, weapons, or space safety. Reportable hazards include unsafe procedures, practices, or conditions. AFI 91-202, USAF Mishap Prevention Program explains the hazard-reporting program in detail.

Hazard Reporting Procedures:

Report hazards to the responsible supervisor or local agency. If the hazard is eliminated on the spot, no further action is required unless it applies to other similar operations or to other units or agencies.

- If the hazard presents imminent danger, the supervisor or individual responsible for that area must take immediate action to correct the situation or apply interim control measures.
- Report hazards that can't be corrected at lower levels to the safety office via AF Form 457, USAF Hazard Report, or by telephone or in person. You may submit reports anonymously.
- An Important Note on Hazard Reporting: Supervisors must ensure blank AF Form 457 is kept readily available to workers and workers know where the forms are located. Workers should never have to "ask" for the forms. They should be readily available so a worker can grab it and submit it anonymously if they choose. Federal Law prohibits reprisal to any employee who submits a hazard report or reports a hazardous condition.

Required Training Topics

Workplace Hazards
Personal Protective Equipment
Emergency Action and Fire Prevention
Reporting Unsafe Equipment, Conditions, or Procedures
Mishap, Occupational Injury, and Illness Reporting
CA-10 and LS-201
DAF Traffic Safety Program
DAFVA 91-209 Location and Content
DAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control
- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

No job-specific modules selected yet.

- **Adverse Weather Shelter:** Not entered

No evacuation route image uploaded.

Emergency Equipment and Safety Board

Safety Bulletin Board Location: Posted in additional office in Fuel temporary trailer

List fire pull stations, extinguishers, power cutoffs, eyewash stations, AEDs, foam systems, and any local fire/emergency equipment notes.

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:

Enter local gate hazards, base-specific traffic concerns, spotter rules, and where vehicle training is documented.

Motorcycle Safety Representatives / Traffic Contacts:

List unit or group motorcycle safety representatives, traffic safety contacts, and local rider briefing requirements.

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.
