Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 944th Operations Group

Work Center: Ops Support

Work Area / Office Symbol: DOO/CSS/OSOF Building 976

Phone: (623)856-0469

Supervisor: MSgt Adam Raley

Reviewer: MSgt Adam Raley

Review Date: 2026-10-21

Effective Date: 2026-10-21

Work Center Overview

The 944th Operations Group administrative work center encompasses climate-controlled office suites, conference facilities, and computer workstations dedicated to flight records management, operational planning, and administrative duties.

Work Area Hazard Analysis / JHA Notes

Operational hazards in this environment primarily involve musculoskeletal fatigue and cumulative trauma disorders from prolonged visual display terminal (VDT) use and improper ergonomics; slips, trips, and falls caused by wet flooring, transition thresholds, or trailing cables; acute lower-back strain from manual material handling of copy paper cartons () and archive records; mechanical and tip-over risks associated with lateral filing cabinets, step stools, and motorized paper shredders; and electrical shock or fire hazards resulting from daisy-chained power strips, unapproved portable space heaters, or unattended breakroom appliances.

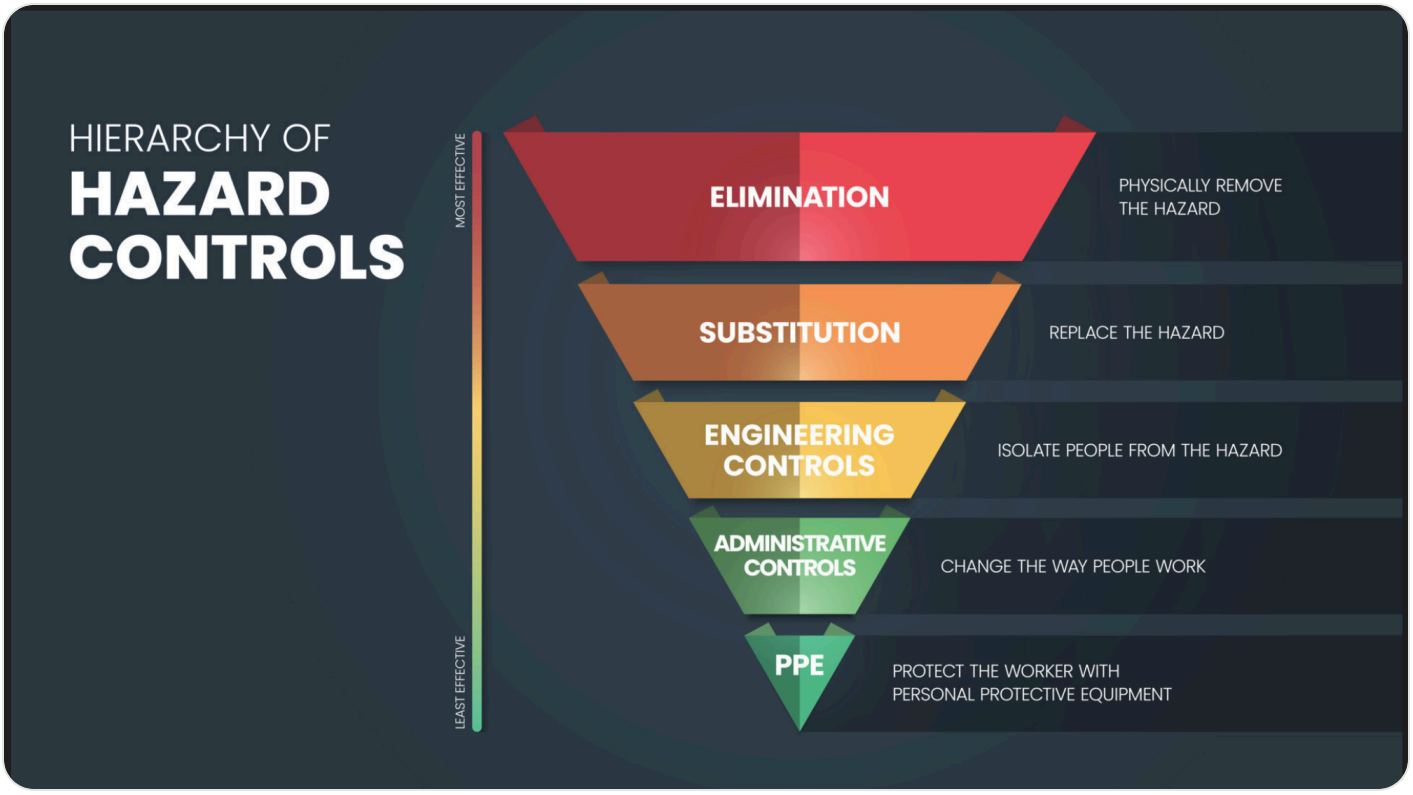

Required Training Topics

Workplace HazardsPersonal Protective EquipmentEmergency Action and Fire PreventionReporting Unsafe Equipment, Conditions, or ProceduresMishap, Occupational Injury, and Illness ReportingCA-10 and LS-201DAF Traffic Safety ProgramDAFVA 91-209 Location and ContentDAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

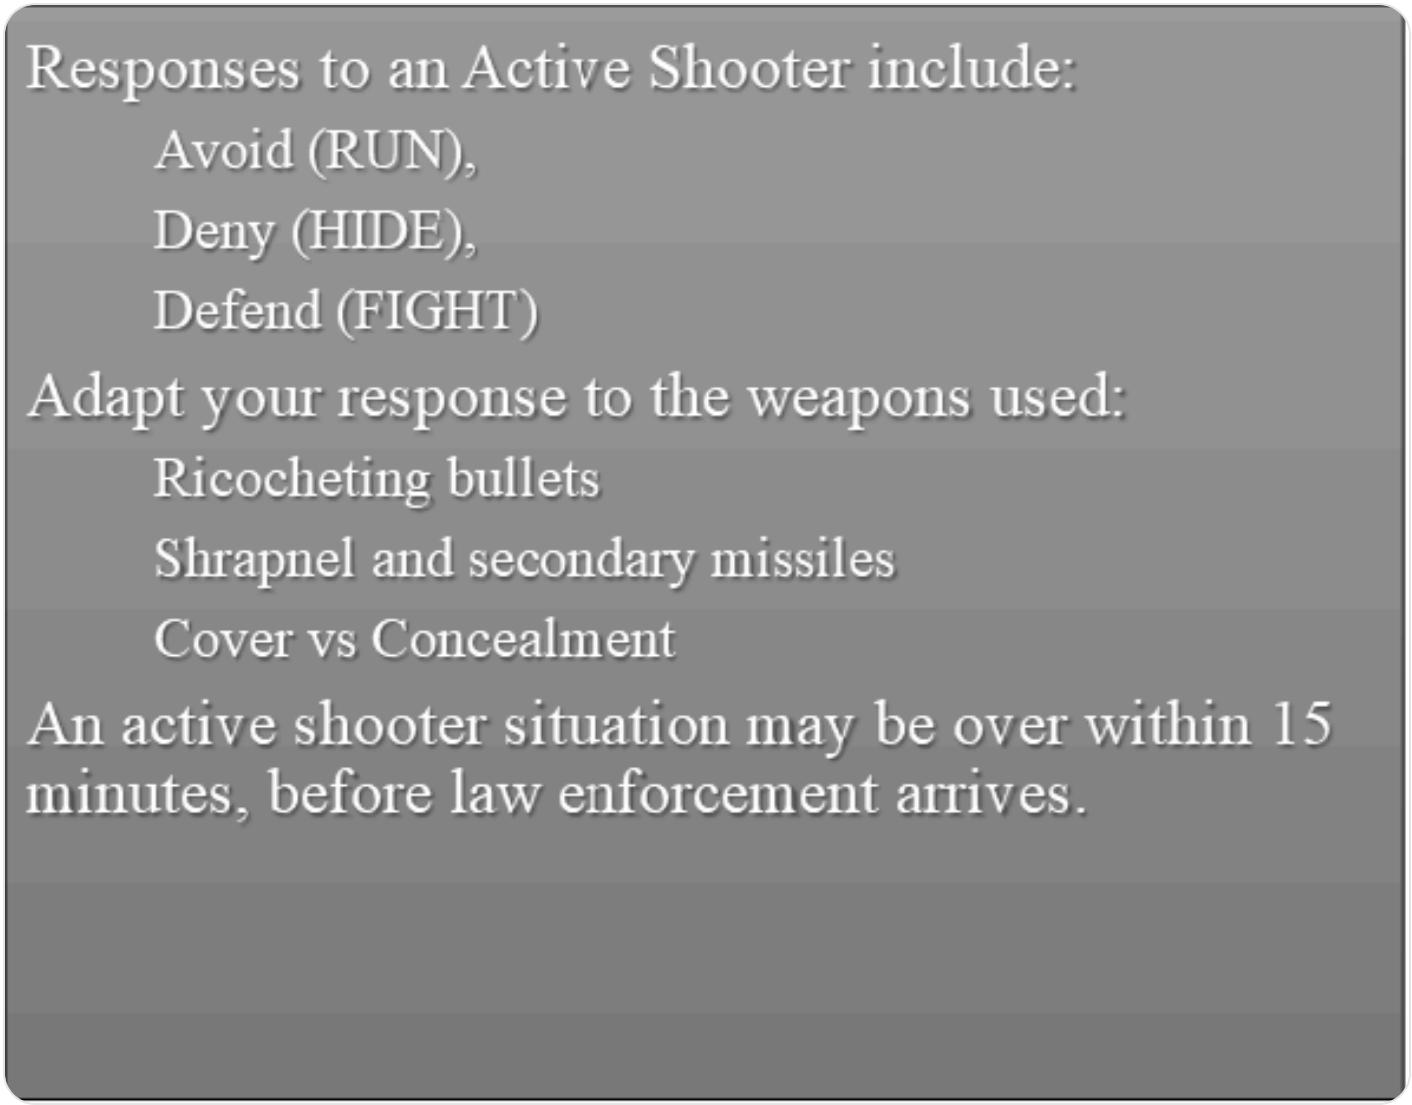

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

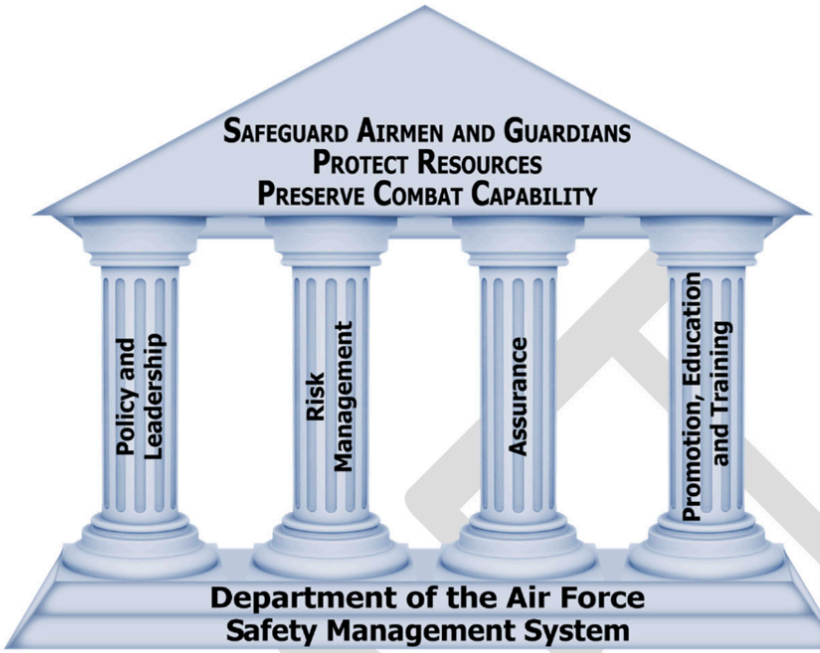

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter’s location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control

- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

No job-specific modules selected yet.

Department of Defense & Federal Standards:
DoDI 6055.01, DoD Safety and Occupational Health (SOH) Program.

29 CFR 1910, OSHA General Industry Standards (specifically Subpart D for Walking-Working Surfaces, Subpart E for Means of Egress, Subpart S for Electrical, and 1910.1200 for Hazard Communication).

Local & Wing Policies (944 FW / Host Installation):
944 FW Mishap Prevention Program / Safety Supplement.

Building Emergency Action Plan (EAP) & Facility Evacuation Annex.

Base Fire Prevention Policy (governing portable space heaters, breakroom appliances, and egress clearances).

Prescribed Forms & Systems:
AF Form 55, Employee Safety and Health Record (or current digital Safety Management System/AFSAS equivalent).

AF Form 457, USAF Hazard Report.

AF Form 978, Supervisor's Report of Employee Injury/Illness.

Required Documents

- CA-10
  What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.
- DAF Form 457
  Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or procedures in the workplace.
- DAFVA 91-209 **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
  Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations.
  Location Posted: Enter where DAFVA 91-209 is posted for this work center.
- LS-201
  Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** Base Landline / DSN Emergency: 911

  Cell Phone On-Base Emergency Dispatch: (623) 856-5911 (or 911 specifying Luke AFB, Bldg [Number])

  Luke AFB Ambulance / Medical Clinic Dispatch: (623) 856-2273

  American Association of Poison Control Centers: 1-800-222-1222

  Wing Command Post (24/7 Operations Desk): (623) 856-5600 / DSN 896-5600

  944th Fighter Wing Safety Office (Occupational Safety): (623) 856-6941 / DSN 896-6941

944 OG Unit Safety Representative (USR): MSgt Adam Raley (623)856-0469, SSgt Jordan Hawes (623)856-0669

- **Medical Facility / Treatment:** Immediate Life-Threatening Emergencies:
  Call Base Emergency Dispatch (911 DSN / (623) 856-5911 cell) or request Luke AFB dispatch.

  Administer CPR/AED immediately if trained; assign a designated runner to the building exterior to guide arriving emergency responders.

  Direct ambulance transport to the nearest designated trauma/emergency facility (e.g., Abrazo West Campus Level 1 Trauma Center, Banner Estrella).

  Duty Status-Specific Treatment Channels:
  Military Personnel (Active Duty / AGR / Title 10 Orders): Report to the 56th Medical Group Clinic (Luke AFB Clinic), Bldg 1022. For after-hours care, consult the TRICARE Nurse Advice Line (1-800-TRICARE) prior to seeking civilian urgent care.

  Traditional Reservists (TRs / IDT Drill Status): Report to the 56 MDG or base urgent care during drill status. Immediate initiation of a Line of Duty (LOD) determination before the end of the drill period is mandatory.

  DoD Civilians & Air Reserve Technicians (ARTs - Civilian Status): Initial emergency stabilization at the base clinic, followed by referral to designated Federal Employees' Compensation Act (FECA) / Office of Workers' Compensation Programs (OWCP) medical providers. Issue Form CA-16 (Authorization for Examination/Treatment) and file Form CA-1 (Notice of Traumatic Injury).

  Work Center First Aid Kit Guidelines:
  Kit location, designated custodian, and monthly replenishment checks.

  Strict adherence to Air Force policy prohibiting oral medications (e.g., aspirin, ibuprofen) in unit first aid kits to prevent allergic reactions.

  Mishap Documentation & Reporting:
  Completion and submission of AF Form 978 (Supervisor's Report of Employee Injury/Illness) within 24 hours to the 944 FW Safety Office for entry into the Air Force Safety Automated System (AFSAS).
- **Evacuation / Muster Point:** Entrances and exits are located on all four sides of the facility (North, South, East, and West). Personnel must evacuate via the nearest clear, unobstructed exit away from smoke or hazards.

  Primary Muster Point: SOUTH PARKING LOT. All personnel must report immediately to their section supervisor / muster coordinator for 100% accountability.
- **Shelter in Place:** Primary SIP Location: ROOM 130 (MAIN BRIEFING ROOM). Designated secure collective sheltering location during hazardous material releases, airborne environmental threats, base chemical/biological alerts, or severe weather events. Ensure doors are closed, HVAC is set appropriately per EAP instructions, and accountability is verified.
- **Active Shooter Response Methods:** Executed strictly IAW Luke AFB Procedures:• RUN (Evacuate): If a safe path is accessible, evacuate immediately via the nearest exit (utilizing any of the four building exits). Leave belongings behind. Keep hands visible with fingers spread.• HIDE (Lockdown / Shelter): If evacuation is unsafe, seek immediate cover. Secure and barricade doors (utilizing Room 130 or inner office suites), turn off lights, close window blinds, silence mobile phones/radios, and remain silent out of sight.• FIGHT (Defend): As an absolute last resort and only when life is in imminent danger, attempt to disrupt or incapacitate the shooter using aggressive improvised measures and team commitment.• Law Enforcement Arrival (56 SFS): When Security

Forces arrive, remain calm, keep hands raised and empty, do not make sudden moves or point, and immediately obey all verbal instructions.• Alerts & Reporting: Monitor AtHoc emergency mass notifications; notify 56 SFS BDOC ((623) 856-6322) or Base Emergency Dispatch ((623) 856-5911) as soon as safe.

- **Adverse Weather Shelter:** Relocate to interior windowless spaces—including Room 130 or central interior hallways—during severe Arizona dust storms (haboobs) and convective squalls.

Emergency Equipment and Safety Board

Safety Bulletin Board Location: Inside of east entrance

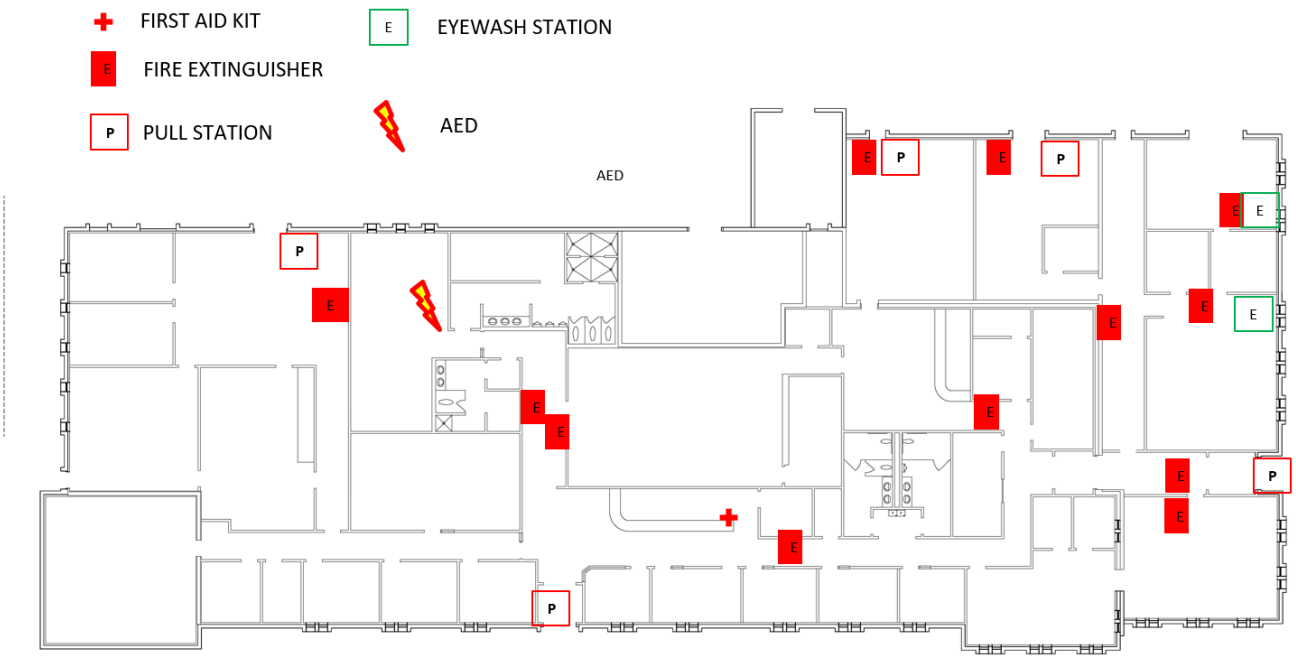

Fire Extinguisher Locations (11 Units Total):1. South Hallway: Outside Room 1512. Room 143 (Inside): Mounted interior3. Room 143 (Outside): Mounted in hallway adjacent to door4. Room 137 & Kitchen Area: Outside Room 137 / Kitchen alcove5. Bar Area: North exit of the bar6–9. Room 140 (Aircrew Flight Equipment - AFE): Four (4) units distributed throughout the AFE work center10. Room 130 (West Exit): Directly outside the Room 130 West door11. NW Entrance: Located immediately inside the building NW entrance.Training: Familiarization with manual pull stations; PASS technique (Pull, Aim, Squeeze, Sweep) for ABC dry-chemical extinguishers; annual visual inspection tag review.

Pull stations are located at all building exits

Three eyewash stations located throughout room 140. These stations only contain bottle of saline solution.

AED located in 108 (Fitness Center)

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

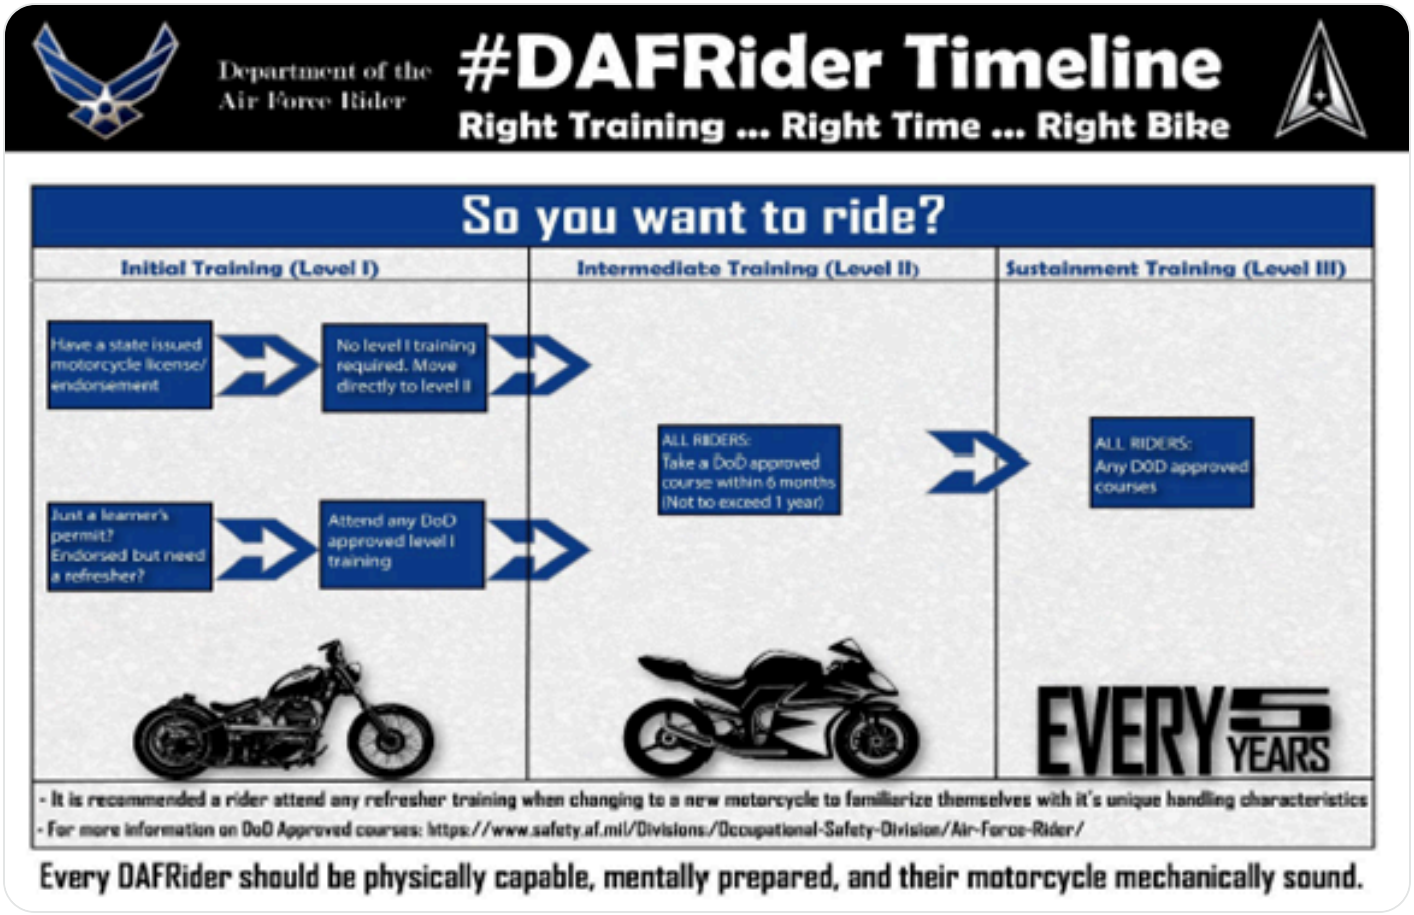

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:
Enter local gate hazards, base-specific traffic concerns, spotter rules, and where vehicle training is documented.

Motorcycle Safety Representatives / Traffic Contacts:
List unit or group motorcycle safety representatives, traffic safety contacts, and local rider briefing requirements.

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

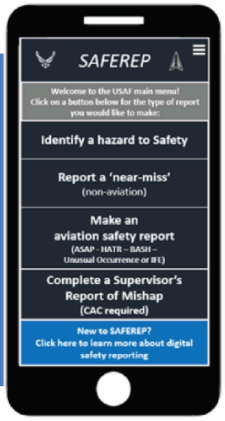

Safety Reporting … All In One Place

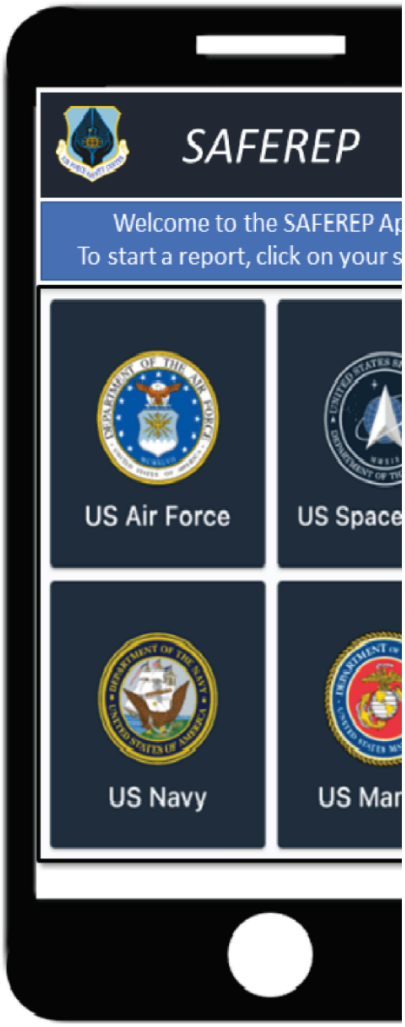

SAFEREP APP!

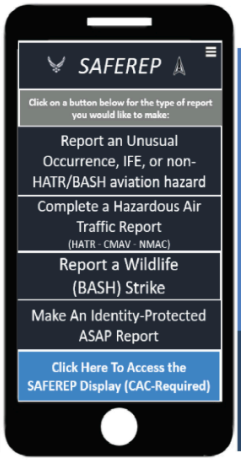

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- "Near miss" events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.
