

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 796 CES

Work Center: CEOHH - Dirt Boyz

Work Area / Office Symbol: Bldg 541

Phone: 850-882-9693

Supervisor: Mr. John Corlew

Reviewer: John Corlew

Review Date: 2026-09-17

Effective Date: 2026-09-17

Work Center Overview

Move dirt and operate equipment.

Work Area Hazard Analysis / JHA Notes

JHA - Taxi Hotel Milling

Required Training Topics

Workplace Hazards
Personal Protective Equipment
Emergency Action and Fire Prevention
Reporting Unsafe Equipment, Conditions, or Procedures
Mishap, Occupational Injury, and Illness Reporting
CA-10 and LS-201
DAF Traffic Safety Program
DAFVA 91-209 Location and Content
DAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.

- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control

- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

The following modules apply to this work center and should be reviewed with trainees before task performance.

Hazardous Energy Control Bloodborne Pathogens Forklift / Material Handling Equipment Hearing Conservation Flight Line Driving Ladder Safety Manual Lifting and Material Handling

- **Hazardous Energy Control:** Document initial and refresher training when job assignments, machines, processes, or energy control procedures change, or when inspections show employee knowledge gaps. Train authorized employees to recognize hazardous energy sources, the type and magnitude of energy present, and the methods and means for isolation and control. Train affected employees on the purpose and use of lockout/tagout procedures, and instruct all other employees on the prohibition against restarting locked or tagged equipment. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 21; 29 CFR 1910.147 - The control of hazardous energy (lockout/tagout)
- **Bloodborne Pathogens:** Enroll applicable workers in the local bloodborne pathogens program and ensure exposure control plan requirements, reporting actions, and PPE procedures are covered before task performance. Provide bloodborne pathogens training at initial assignment and at least annually thereafter, covering exposure control, modes of transmission, and protective measures. 29 CFR 1910.1030 - Bloodborne Pathogens

- **Forklift / Material Handling Equipment:** Use approved lesson plans, hands-on evaluation, and recurring reevaluation before certifying operators. Cover spotter requirements, aircraft proximity rules, and local route restrictions. Train powered industrial truck operators in truck-related and workplace-related topics, evaluate performance, and conduct refresher training when unsafe operation, incidents, or workplace changes occur. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 35; 29 CFR 1910.178 - Powered industrial trucks
- **Hearing Conservation:** Ensure workers enrolled in hearing conservation understand noise hazard areas, double-hearing protection requirements, and local follow-up actions tied to occupational health evaluations. Train noise-exposed employees annually on the effects of noise, the purpose of hearing protectors, the advantages and disadvantages of various protectors, and the purpose of audiometric testing. DAFI 48-127; 29 CFR 1910.95 - Occupational noise exposure
- **Flight Line Driving:** Use installation or unit-approved training and certification for airfield/fight line operations, to include local speed, spotter, and no-lone-zone requirements. Provide local flight line driving rules, markings, vehicle lighting requirements, restricted areas, and aircraft hazard awareness before granting driving privileges. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 24
- **Ladder Safety:** Provide hands-on ladder safety training at first assignment, including local storage, damaged-tag procedures, and fall prevention expectations. Train workers to inspect ladders before use, maintain three points of contact, set ladders on stable surfaces, and avoid overreaching or using damaged ladders. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 7
- **Manual Lifting and Material Handling:** Provide verbal and written guidance on manual lifting, lifting devices, and local reporting actions for strain or overexertion symptoms. Train workers on proper lifting techniques, team lifting, load assessment, and use of lifting aids to reduce musculoskeletal injury risk. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 20

Required Documents

- [CA-10](#)
What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.
- [DAF Form 457](#)
Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or procedures in the workplace.
- [DAFVA 91-209](#) **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations.
Location Posted: Located on Bulletin Board in the Break Room
- [LS-201](#)
Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** 911 - EMS/Law Enforcement
850-882-4020 - Command Post
- **Medical Facility / Treatment:** Eglin Hospital and Emergency Department
306 Boatner Road
Eglin AFB, FL 32542

850-883-8600
- **Evacuation / Muster Point:** Personnel will evacuate to the "Big Cedar Tree" for accountability.
- **Shelter in Place:** Shelter In-place location is the Break Room, located in Bldg. 541
- **Active Shooter Response Methods:** Not entered
- **Adverse Weather Shelter:** Not entered

No evacuation route image uploaded.

Emergency Equipment and Safety Board

Safety Bulletin Board Location: Not entered

List fire pull stations, extinguishers, power cutoffs, eyewash stations, AEDs, foam systems, and any local fire/emergency equipment notes.

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:

Enter local gate hazards, base-specific traffic concerns, spotter rules, and where vehicle training is documented.

Motorcycle Safety Representatives / Traffic Contacts:

List unit or group motorcycle safety representatives, traffic safety contacts, and local rider briefing requirements.

Department of the
Air Force Rider

#DAFRider Timeline

Right Training ... Right Time ... Right Bike

So you want to ride?

Every DAFRider should be physically capable, mentally prepared, and their motorcycle mechanically sound.

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

Safety Reporting ... All In One Place

SAFEREP APP!

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- “Near miss” events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.
