Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 436 CIVIL ENGINEERING SQUADRON

Work Center: HVAC

Work Area / Office Symbol: 615/CEOIH

Phone: 677-4850

Supervisor: JOSEPH TYLER

Reviewer: TSGT KORY WILSON

Review Date: 2026-11-04

Effective Date: 2026-11-04

Work Center Overview

The items below are mandatory and will be briefed to all personnel. Develop a work center specific JSTG based on Attachment 4, Job Safety Training Outline (JSTO), on safety, fire protection/prevention and health requirements. Documents will be maintained and centrally located, readily available to supervisor and individual. The 14 mandatory items below can be documented as one item, i.e., course code for JSTO mandatory training. Job specific items and any additional training identified in a Bioenvironmental survey will be documented individually, as appropriate. The supervisor will document and maintain completed training in the work area.
Methods of documentation may include, but are not limited to, the AF IMT 55, Employee Safety and Health Record, electronic mediums such as AFFORMs/MAF LOG C2/G081 or locally developed products. If the AF IMT 55 is mandated for use as the training documentation device, the entity that mandated the form usage will prescribe the requirement in writing to include entries that require signatures, e.g., HAZCOM, respirator, powered industrial trucks, lockout/tagout, fall protection, confined spaces, radiation safety, laser safety, etc. Note: Training requirements vary, i.e., some documents may require the signature of the supervisor or the person who conducted the training, while other documents may require the initials of the individual (trainee) and trainer/supervisor.

Documentation will contain the following minimum data: trainee name (last, first, middle initial), type of training and date of training. Neither the trainer or trainee signature is required unless specified in writing by the applicable chain of authority. Note: If the Integrated Maintenance Data System (IMDS), Core Automated Maintenance System (CAMS), etc., cannot support minimum documentation requirements, then they are not suitable as a documentation product.

Work Area Hazard Analysis / JHA Notes

Summarize JHA findings, BE survey notes, major hazards, controls, and special restrictions for this work center.

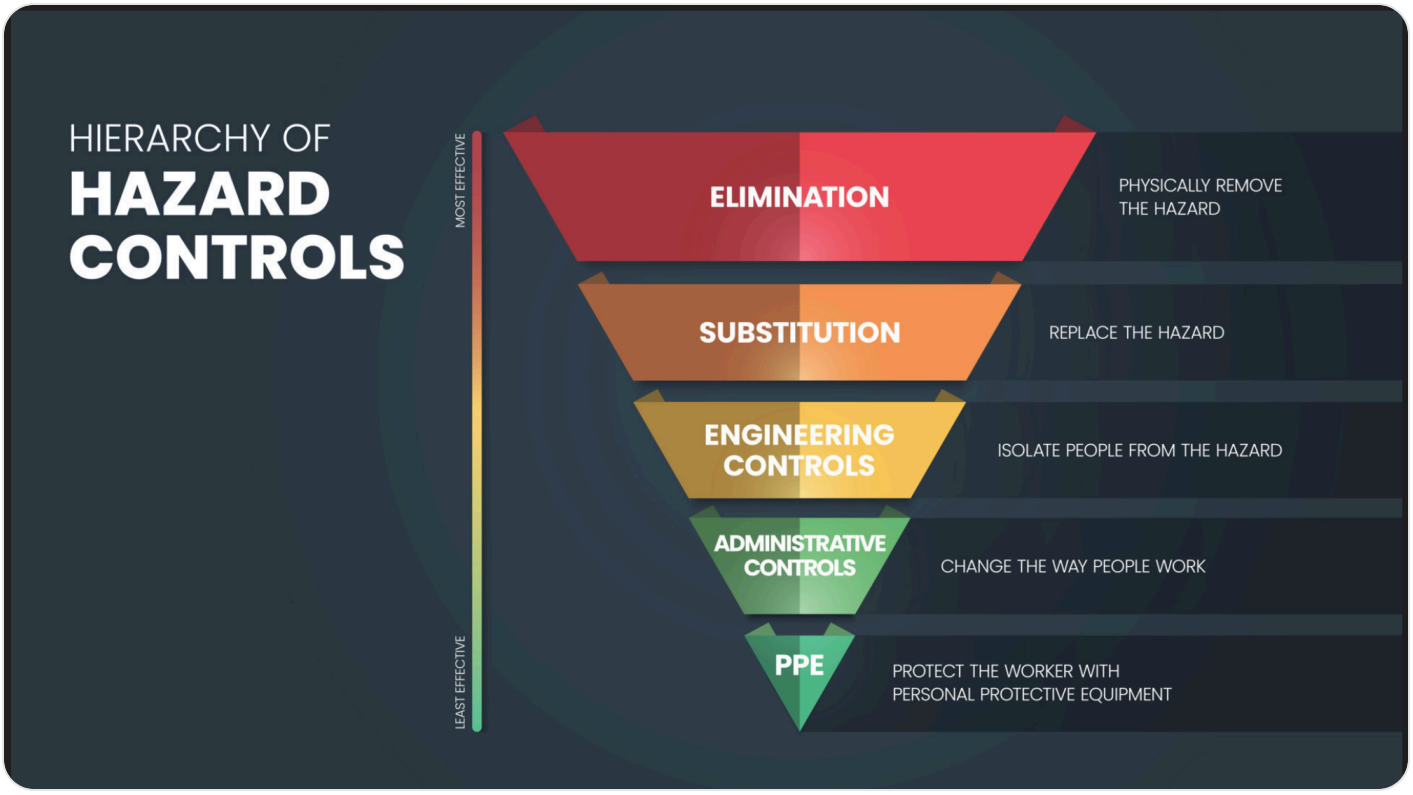

Required Training Topics

Workplace HazardsPersonal Protective EquipmentEmergency Action and Fire PreventionReporting Unsafe Equipment, Conditions, or ProceduresMishap, Occupational Injury, and Illness ReportingCA-10 and LS-201DAF Traffic Safety ProgramDAFVA 91-209 Location and ContentDAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

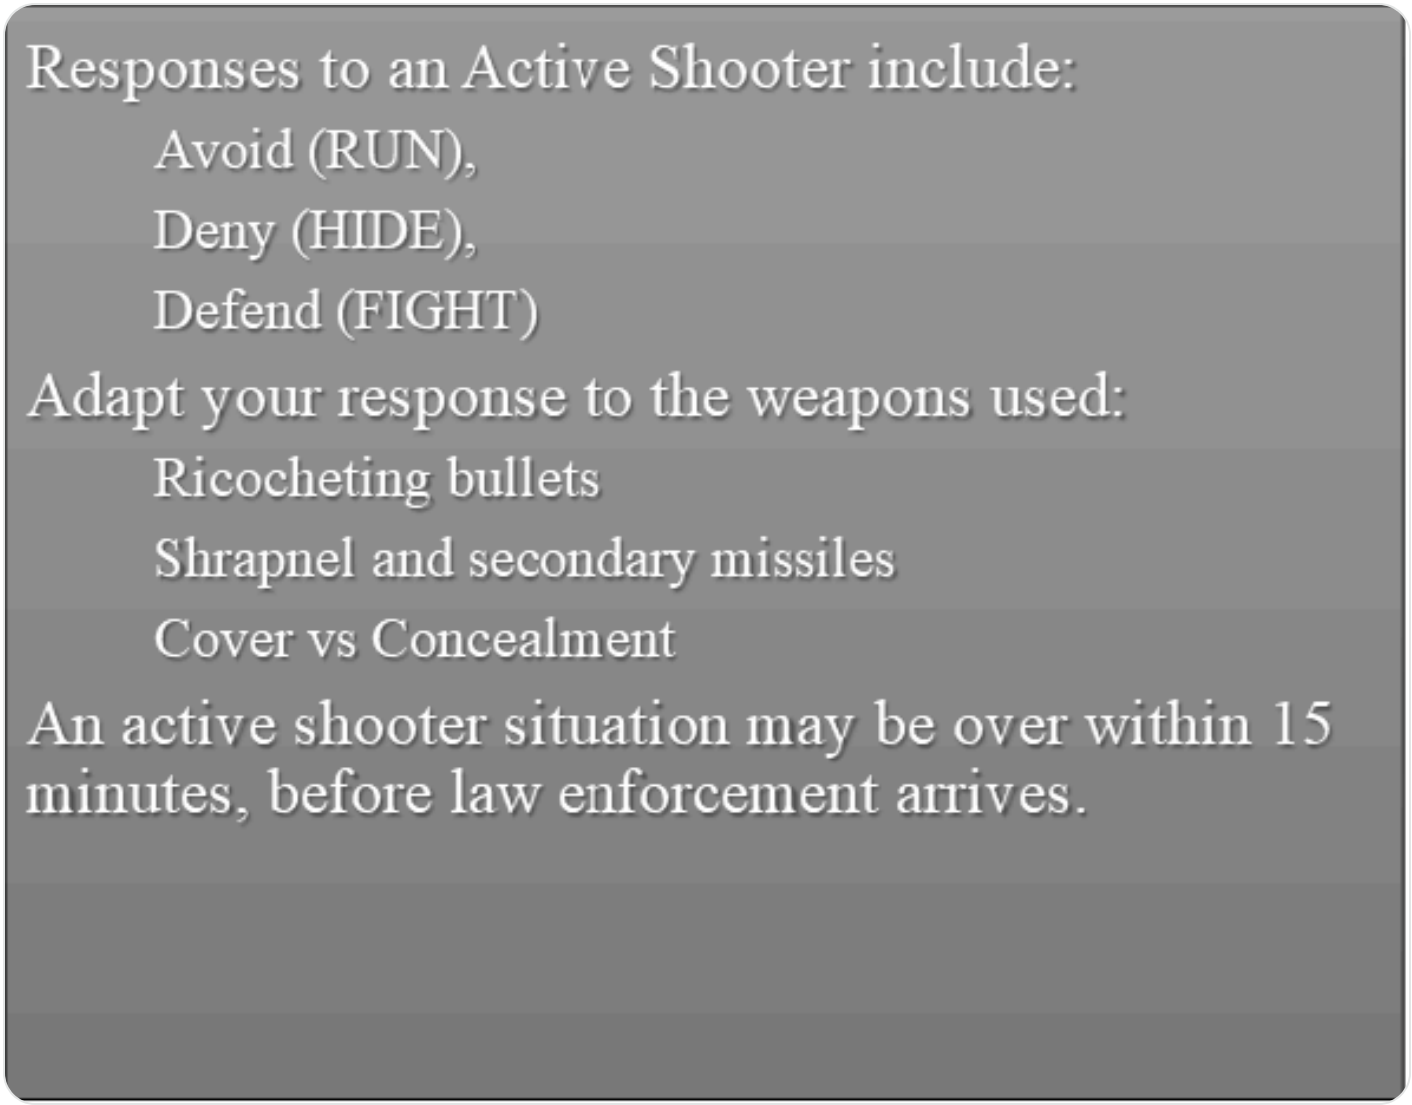

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

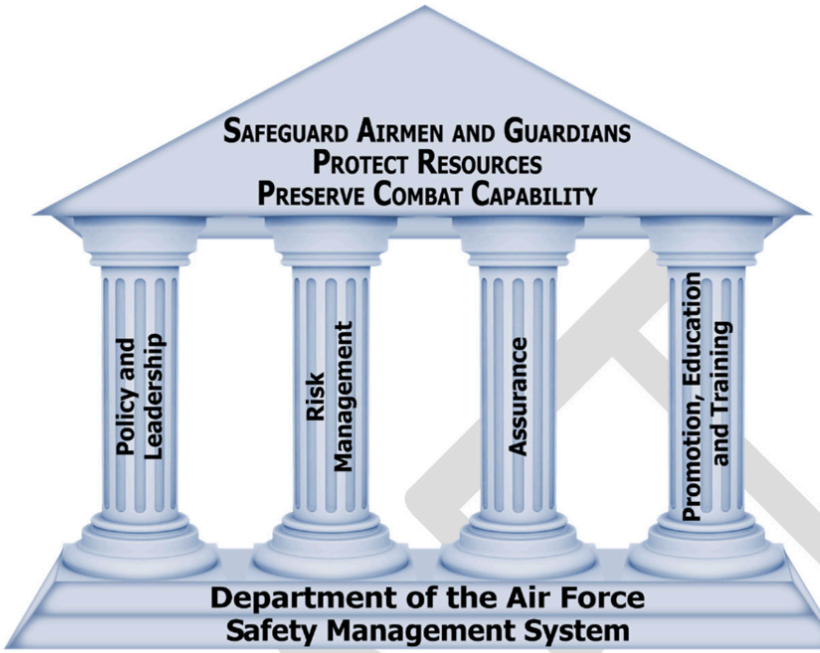

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter’s location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control

- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

No job-specific modules selected yet.

No modules selected

Required Documents

- CA-10
  What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.
- DAF Form 457
  Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or procedures in the workplace.

- DAFVA 91-209 **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
  Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations.
  Location Posted: Enter where DAFVA 91-209 is posted for this work center.
- LS-201
  Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** 911 - emergency. BDOC - 302-677-6666
- **Medical Facility / Treatment:** During normal duty hours on weekdays, personnel are to report to Dover AFB Clinic for assessment and treatment of injuries suffered while on-the-job. Civilian employees may elect to receive treatment from their personal physician.

  If the injury or medical condition does not permit the injured person to first report to Dover AFB Clinic, the individuals should be treated at the closest medical facility which in most cases will be Bay Health Medical Center (otherwise known as Kent General Hospital) located in downtown Dover, contact information is: (302) 674-4700.

  The Base Clinic is located in Building 300. Also, advise member that the Base Clinic no longer provides 24 hour emergency service. Make sure the individual understands the procedure to get medical attention on and off duty as per TRICARE provider procedures (1-877-TRICARE or 1-877-874-2273).
- **Evacuation / Muster Point:** Fire Route:
  Personnel evacuating from Bldg. 615 shall take the most direct to the 615 parking lot near building 605

  Alternate Fire Route:
  Personnel evacuating shall take the most direct route to the 600 parking lot

  Bomb Route:
  Personnel evacuating from Bldg. 615 shall take the most direct to the 615 parking lot near building 605

  Alternate Route:
  Personnel evacuating shall take the most direct route to the 600 parking lot.
- **Shelter in Place:** S.I.P. Break room
- **Active Shooter Response Methods:** Individuals should employ the Avoid, Deny, Defend response method. This strategy is adaptable to the specific situation and environment.
- **Adverse Weather Shelter:** During adverse weather Shelter in PLace would be in the break room.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:
Requirements of Air Force Traffic Safety Program, including mandatory use of seat belts and helmets, speed limits, local traffic hazards, and personal risk management. Additionally, brief use of seat belts and helmets, speed limits, local traffic hazards, and personal RM. Additionally, brief uee of electronic devides while GMV/PMV on or off base. IAW AFI 91-207. If Applicable, discuss Motorcycle Safety Training Requirements Before Riding A Motorcycle. (AFI 91-202 para. A4.1.9)

Seat belts will be worn on and off-base any time a vehicle is in motion. Emphasize that wear is MANDATORY. Discuss possible administrative actions if caught without utilizing the seat belt (i.e. possibility of losing driving privileges, tickets, fines, etc.). Discuss flightline- required usage in forward facing seats. Remember that use of belts is mandatory on or off base, on or off duty to include back seats. You will get ticketed. Buckle Up! (Ref AFI 91-207)

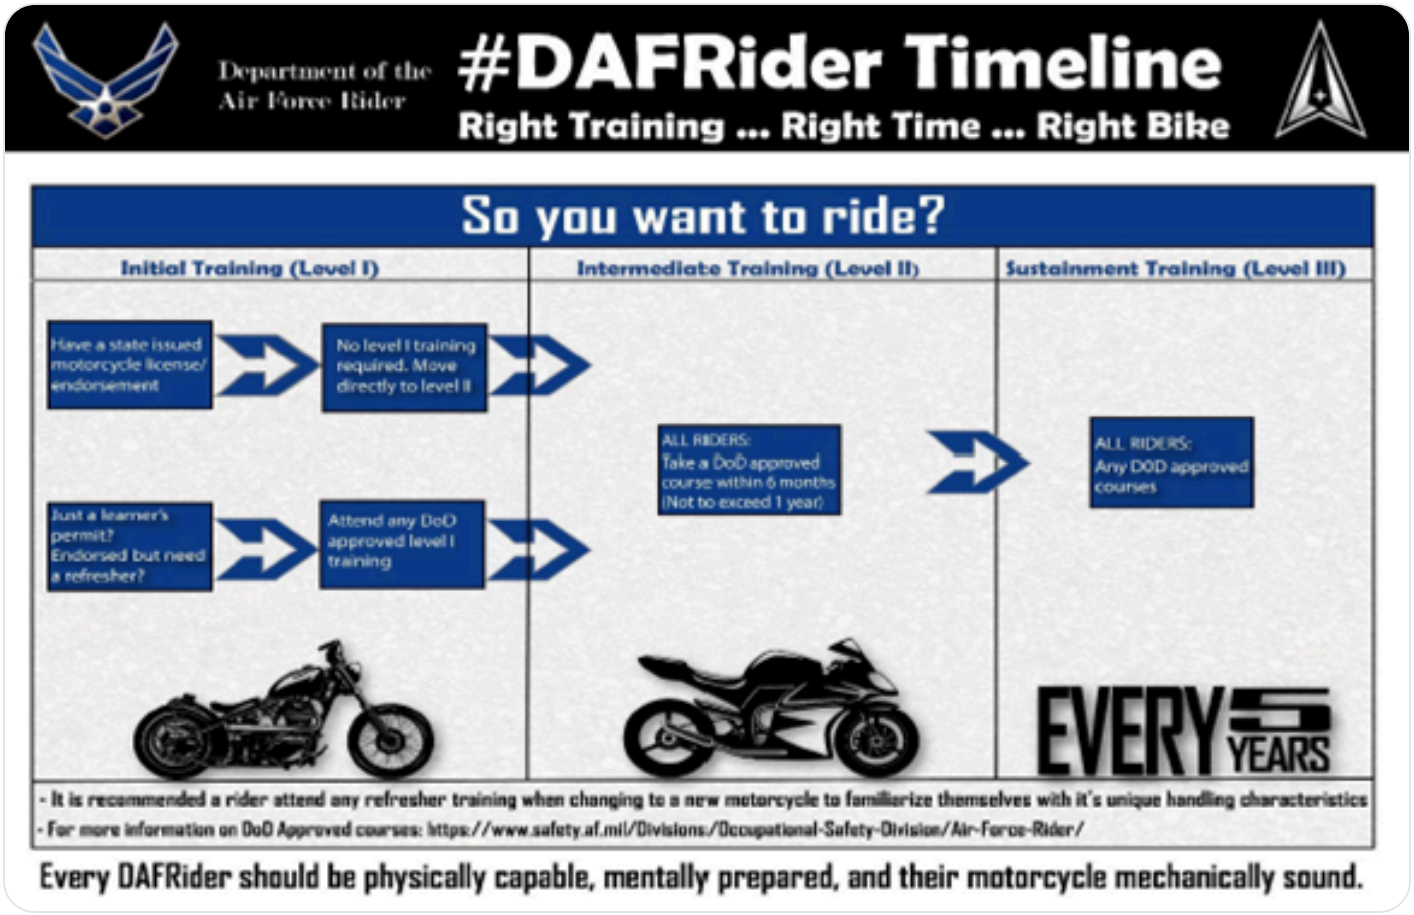

NOTE: Placing the shoulder strap under the arm or not using/disconnecting automatic belts constitutes “improper use” and could result in a citation - or worse yet additional/more severe injuries should you get into an accident.

If you are required to drive on the flightline, you must accomplish flightline driver training. Completion of the course includes formal training, a written exam, airfield diagram test, both a day and night familiarization, and a practical evaluation if required.

Cell phone use while driving is prohibited. If you are driving and you need to take a call, use hands free device or safely pull off to the side of the road, put your hazards lights on and take the call.

Be aware of severely congested traffic on Highway 13 and Route 1 in Dover during NASCAR weekend. Use defensive driving techniques. Attempt to accomplish errands during the races, not before or after.

Motorcycle Safety Representatives / Traffic Contacts:
All newly assigned and PCS personnel who are motorcycle riders will be required to process through the commander or designated representative. Unit commander or designated MSR(s) will provide an initial briefing to all new or newly assigned motorcycle riders within 30 days from initial assignment, identification as a rider or purchase of a motorcycle

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

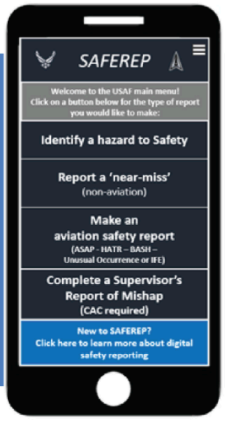

Safety Reporting … All In One Place

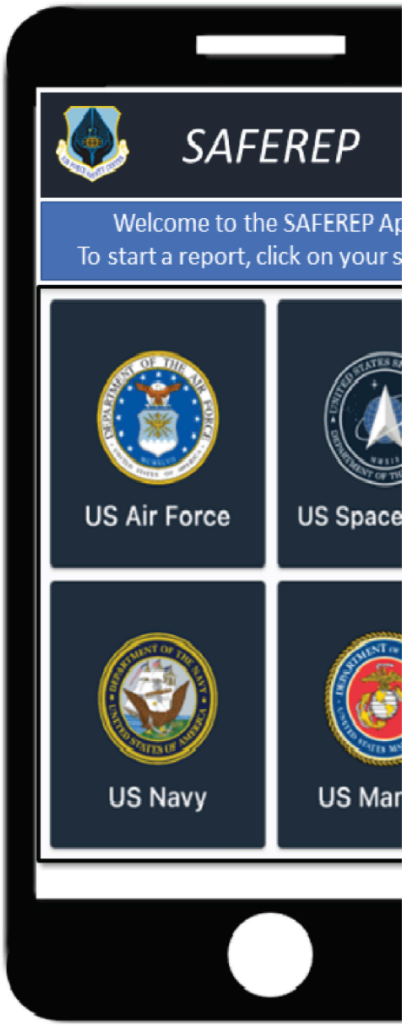

SAFEREP APP!

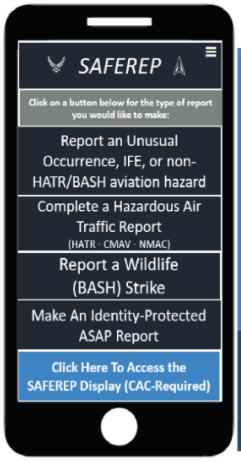

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- "Near miss" events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.
