

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 194 Logistics Readiness Squadron

Work Center: Bldg. 109/Multiple Work Centers

Work Area / Office Symbol: LGRDX, LGLO,LGRM, LGRDDO and Command Section

Phone: DSN: 370-2190

Supervisor: LT Col. Edwards, Leroi

Reviewer: USR: SSgt Gaspar, Zoren

Review Date: 2026-10-01

Effective Date: 2027-10-01

Work Center Overview

Building 109 supports multiple functions within the 194th Logistics Readiness Squadron, including LGRM, LGRDX, LGLO, LGRDDO and the Command Section. Personnel assigned to the facility perform a variety of logistics, administrative, supply, transportation, and mission support duties in support of the 194th Wing. This JSTO establishes the required safety training for personnel assigned to Bldg. 109 and addresses common workplace hazards, emergency procedures, PPE requirements, mishap prevention, and safe work practices. Personnel will also comply with work-center specific JHA's, operating procedures, and safety requirements applicable to their assigned duties.

Work Area Hazard Analysis / JHA Notes

HAZARDS OF THE JOB SPECIFIC PRECAUTIONS/REQUIREMENTS

- ▣ **Material Handling:** Always lift with your legs, not your back. Squat down, grasp the item close to your body, and lift straight up. Do not twist your body to turn. If you need to turn, pivot on your heels in the direction you need to turn. Avoid any unnecessary twisting and lower the item in the same way you lift it. If you need help lifting an object because it is too heavy or awkward ask for assistance.
- ▣ **Walking/Working Surfaces:** Walk, don't run. Be aware of items (cords, loose carpet, pencils, paper, etc.) that may cause you to slip/trip and fall. Climb stairs facing forward, stay to the right side, use the handrail and avoid distractions that may cause you to fall. Do not run up or down stairs.
- ▣ **Stairwell Safety:** Do not run up or down stairs, always use hand rails. Do not skip steps if in a hurry. If carrying packages be sure of your footing. When climbing stairs stay to your right. When going down stairs stay to your right. Report any damage to stairs or hand rail to your building custodian.
- ▣ **Electrical Hazards:** Computers and other electrically powered equipment are used in the office environment. Ensure all electrically operated equipment has a ground prong, if manufactured with one, and that all prongs are securely attached. When plugging and unplugging electrical equipment, grasp the base of the cord. Frequently inspect cords for damage. If you feel a shock or tingling sensation when touching a piece of equipment, turn it off at the power strip or circuit breaker and notify your supervisor. Multiple plug adapters will not be used solely as wiring to provide additional or more convenient outlets. Power strips should only support low wattage equipment. Do not plug coffee makers, microwaves, refrigerators, etc. into these. In addition, do not plug any higher amperage devices into modular furniture (microwaves, toasters, refrigerators), as the wiring inside is not designed to carry these loads and a fire may result.
- ▣ **Hand Tool Safety:** You may occasionally be required to use tools in the office (utility knives, screw drivers, etc.). Ensure you always cut away from your body. Do not carry and/or store unguarded blades or sharp objects in your pockets or desk drawers. There are assortments of hand tools that may be used in an office environment. Ensure that all tools are used for the purposes for which they were designed. Inspect tools prior to use. If an unsafe tool is found, remove it from service and report it to your supervisor.
- ▣ **Repetitive Motion Hazards:** Repetitive tasks such as typing may create problems for some individuals. To avoid such problems, alternate tasks to prevent the over-exertion of a particular body part or series of parts. Your supervisor should provide you with the latitude to alternate tasks without hindering mission effectiveness. Schedule your daily tasks with this in mind.
- ▣ **Office Safety:** Desks, tables and many other pieces of office furniture have sharp corners that can cause injury. Use caution particularly when walking around desks. Open file cabinet drawers one at a time to prevent possible tipping. Desk and cabinet drawers should never be left unattended in the open position. Position office equipment in a manner that egress and ease of movement is not hampered. Proper sitting is important. Employees leaning back or sitting on the front edge of the seat creates mishaps/falls from chairs.

Required Training Topics

Workplace Hazards
Personal Protective Equipment
Emergency Action and Fire Prevention
Reporting Unsafe Equipment, Conditions, or Procedures
Mishap, Occupational Injury, and Illness Reporting
CA-10 and LS-201
DAF Traffic Safety Program
DAFVA 91-209 Location and Content
DAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control
- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

No job-specific modules selected yet.

- **Medical Facility / Treatment:** LOCATION OF MEDICAL FACILITIES & PROCEDURES FOR OBTAINING TREATMENT

□ Emergency Medical Treatment is not available on Camp Murray.

□ The nearest Emergency Medical Facility is located on JBLM at the Madigan Army Medical Center.

□ Madigan Army Medical Center is located on Lewis Main and is on Jackson Ave. The emergency room is located on the north side of the building. All active duty military personnel, whether full-time or part-time, are authorized to use the hospital for emergency treatment.

□ For non-emergencies, appointments must be made at McChord medical appointment line, phone number: 1-800-404-4506. Dental services are also available at McChord by calling 982-5505. Call 911 for emergencies.

□ Air Force and DoD civilian personnel must complete a Form CA-1 or CA-6 (obtained from supervisor/safety representative). This should be completed as soon as possible after medical treatment is sought. Contact the civilian personnel office for assistance, 253-512-7944.

□ If emergency responders are needed, call 911 from any base telephone. (Note: If you dial 911 from your cell phone, it may delay response since the call goes to an off-base responder). The Fire Department will respond with paramedics/EMTs that are on shift. They can evaluate the injuries and recommend further medical attention. If further medical attention is needed, an ambulance may be called to transport the individual to a medical facility. If it is not a severe injury, but the person feels that a doctor needs to check it, they may go to an off-base medical provider of their choice within a reasonable distance (25 miles).

- **Evacuation / Muster Point:** Primary evacuation rally point is the parking lot (island) in front of building 106 and the secondary rally point is east side of building 105, between building 105 and building 104A.
- **Shelter in Place:** Not entered
- **Active Shooter Response Methods:** Active shooter response methods: AVOID, DENY, DEFEND: After being notified of an active shooter (At Hoc, GIANT VOICE, radio network, landline telephone, cellphone, gunfire, etc.), unit members should do one of the following if able to, and not necessarily in this order. Members should always consider what method provides them the best chance for survival:

a. Avoid: Avoid is a state of mind and it is not always the physical action of moving away (run) from danger and drives more to be constantly aware of your surroundings. Get out if you can, even if others insist on staying. Consider all points of egress as potential escape routes (e.g., windows, doors). Leave belongings behind. Your life is more precious than "things". Move tactically (e.g., stay low, move quickly and silently out of harm's way). Once out, seek shelter far away from the ASI and call 9- 1-1. Be prepared to provide as much information as possible (5W's- Who, What, When, Where and Why-if known). If wounded are encountered during escape evacuation, do not treat the wounded in the danger area-assist in their escape (if possible) and only treat wounded when properly barricaded.

b. Deny: Deny the attacker access to you and those around you. Hiding is an option but has proven problematic during ASIs. The idea of "hide and hope" is not an effective survival strategy during an ASI. If you can't get out, find a place of cover and concealment. Barricade or lock doors. Take cover behind large/solid objects. Turn out lights and silence your phone / radios and remain quiet. Do not report your location or who is with you via social media.

c. Defend: It is important to be prepared to fight for your life. The word defend emphasizes your legal right to defend yourself and others in harm's way, which includes protecting, resisting, and fighting for your life. Attempt to incapacitate the shooter. Act with overwhelming aggression and maximum violence. Improvise weapons and throw objects at the shooter. Commit to your actions.

- **Adverse Weather Shelter:** Not entered

Emergency Evacuation Route Image:

Emergency Equipment and Safety Board

Safety Bulletin Board Location: The Safety Bulletin Board is located in the main hallway between the conference and room Ground Transportation office (LGRDDO)

List fire pull stations, extinguishers, power cutoffs, eyewash stations, AEDs, foam systems, and any local fire/emergency equipment notes.

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:

▣ **MANDATORY USE OF SEAT BELTS:** AFI 91-207, The US Air Force Traffic Safety Program, outlines the requirements for seat belt use. Safety belts will be worn by anyone driving or riding in a vehicle on base. Active duty personnel must wear safety belts when operating a vehicle (regardless whether it is a GOV or POV) on or off base. AF civilian personnel on duty must wear seat belts on or off a DoD installation. Children 1.50 meters (4 ft, 9 inches) in height or smaller regardless of age must be in an infant seat or child restraint device. As a vehicle operator, you are responsible for ensuring all passengers are using safety belts. Traffic violations for passengers not wearing safety belts go to the operator.

NOTE: Placing the shoulder strap under the arm or not using/disconnecting automatic belts constitutes improper use and may result in a citation or more seriously, death or disability.

▣ IAW DODI 6055.4 (Traffic Safety Program) and AFI 91-207, The US Air Force Traffic Safety Program, the use of headphones, earphones, and cellular telephones is prohibited while operating a vehicle on a DoD installation. The only caveat to this is using a hands free device or in hands-free operating mode.

▣ **SPEED LIMITS:**

- You, as a driver, have to follow speed limits on and off base.
- On base the general speed limit is 25 mph if no other sign is posted.
- The basic speed limit off base is 35 mph in built-up areas and 55 mph on roadways. Typically, on highways, it is 60 mph. If you are hauling a trailer, camper, or boat, reduce your speed to prevent from tipping over or jackknifing.

▣ **LOCAL TRAFFIC HAZARDS:**

- **DRIVING DURING WINTER** in this area is extremely dangerous with ice and snow because the roads are over populated and there are numerous curves and hills. Black ice can increase risk of accidents, so slow down and take your time during the winter months. We would rather have you arrive a few minutes late, than not at all!
- **HIGHWAY I-5:** You may or may not have heard of the motor vehicle mishaps on the I-5; however, according to the Air Force Safety Center, the Air Force loses roughly on average 18 Airmen annually due to fatal motor vehicle mishaps. Protect yourself by reducing your speed and driving defensively. This means expect other drivers to speed and pass at the worst times, and adjust your driving to avoid an accident.

- **RURAL ROADS:** Here in Washington, we have roadways 7, 8, 12, 101, 121, 161, 162, 167, 410, 507, 510, 512, and 706. These roadways on average have a maximum speed limit of 35 mph to 60 mph. These roadways can also become congested with traffic and occasional farm equipment. If you are stuck behind a piece of farm equipment, do not try passing unless it is safe and legal to do so. Be sure to plan ahead so you do not need to rush. Lastly, during the wintertime, these roads are secondary when it comes to sanding and plowing. It is important to know this in case you need to make other arrangements when it comes to getting to your destination. The most serious accidents occur when people drive faster than the road conditions will safely allow. Use common sense and reduce your speed for poor weather conditions and congested traffic.

Motorcycle Safety Representatives / Traffic Contacts:

- **MOTORCYCLE RIDERS:** Motorcycle riders must have a motorcycle endorsement from a state, and have attended a Motorcycle Safety Foundation (Basic Rider or Basic rider II Course). Additionally, each rider must make contact with their unit Motorcycle Safety Representative (MSR). The rider must receive a unit safety briefing from their MSR or designated representative before riding. All riders must also complete an MSF-approved intermediate training course (sport bike riders must take a sport bike riding course) ideally within 60 days but no later than one year after completing initial training. See AFI 91-207. Annual preseason briefings are also required.

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

Safety Reporting ... All In One Place

SAFEREP APP!

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- "Near miss" events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.
