

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: DET 1 3D Combat Weather SQ

Work Center: BLDG 9543

Work Area / Office Symbol: AIRFIELD/ OSWR/ 9602

Phone: 7195240476

Supervisor: SSgt Ramirez Justin

Reviewer: Maj Shinn Matthew

Review Date: 2026-08-04

Effective Date: 2026-08-04

Work Center Overview

Executed comprehensive meteorological forecasting and issued timely Watches, Warnings, and Advisories (WWA) to safeguard aviation assets and personnel operating out of Butts Army Heliport.

Work Area Hazard Analysis / JHA Notes

Work Area Hazard Analysis: Meteorological Watch & Outdoor Observation
Hazard: High noise levels.

Source: Environmental and operational noise exposure encountered when stepping outside to perform meteorological watch (metwatch) and conducting outdoor observations. Potential for cumulative hearing strain or noise-induced hearing loss with prolonged, unprotected exposure.

Impact Potential for cumulative hearing strain or noise-induced hearing loss with prolonged, unprotected exposure.

Mandatory Mitigation / Controls

Engineering & Administrative Controls: Limit duration of continuous outdoor exposure where operationally feasible.

Personal Protective Equipment (PPE): Mandatory use of approved earplugs for all personnel stepping outside to conduct metwatch or outdoor observations.

Required Training Topics

Workplace Hazards
Personal Protective Equipment
Emergency Action and Fire Prevention
Reporting Unsafe Equipment, Conditions, or Procedures
Mishap, Occupational Injury, and Illness Reporting
CA-10 and LS-201
DAF Traffic Safety Program
DAFVA 91-209 Location and Content
DAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

HIERARCHY OF **HAZARD CONTROLS**

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control

- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

The following modules apply to this work center and should be reviewed with trainees before task performance.

Hearing Conservation Laser Safety Training Personal Protective Equipment (PPE) Active Shooter Response Fetal Protection Program

- **Hearing Conservation:** Ensure workers enrolled in hearing conservation understand noise hazard areas, double-hearing protection requirements, and local follow-up actions tied to occupational health evaluations. Train noise-exposed employees annually on the effects of noise, the purpose of hearing protectors, the advantages and disadvantages of various protectors, and the purpose of audiometric testing. DAFI 48-127; 29 CFR 1910.95 - Occupational noise exposure
- **Laser Safety Training:** Use local laser safety officer guidance and approved operating instructions to cover exposure limits, alignment procedures, and emergency actions. Provide laser hazard awareness, eyewear, posting, alignment, and beam-control training before personnel work with lasers or enter laser-controlled areas. DAFI 48-139
- **Personal Protective Equipment (PPE):** Use the work-center JHA, BE occupational health assessment, manufacturer instructions, DAFMAN 91-203 Chapter 14, and local safety office guidance to identify PPE requirements. Supervisors must ensure PPE is provided, used, cleaned, inspected, maintained in sanitary and serviceable condition, and documented in JSTO training records. Cover eye and face protection, head protection, foot protection, hand protection,

protective clothing, and respiratory or hearing protection when those programs apply. Train each affected worker on when PPE is necessary, what PPE is necessary, how to properly don, doff, adjust, and wear PPE, the limitations of assigned PPE, and the proper care, maintenance, useful life, and disposal of PPE. Require workers to demonstrate understanding and proper use before performing work requiring PPE, and retrain when workplace conditions, job assignments, PPE types, or worker knowledge gaps make prior training obsolete. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 14; 29 CFR Part 1910 - Occupational Safety and Health Standards (General Industry Standards) Subpart I; 29 CFR 1910.132; 29 CFR 1910.133; 29 CFR 1910.135; 29 CFR 1910.136; 29 CFR 1910.138

- **Active Shooter Response:** Use local emergency response procedures, shelter locations, and mass notification methods applicable to the duty location. Brief personnel on how to recognize an active shooter event, how to summon help, and how to apply local run-hide-fight guidance based on the facility layout. Installation emergency management guidance / local procedures
- **Fetal Protection Program:** Use occupational and environmental health guidance to discuss declaration options, exposure review, and local work restriction procedures. Provide job-specific hazard awareness for reproductive health risks where occupational exposures may affect pregnant workers or fetuses. DAFMAN 48-146

Ergonomics Workstation Posture Guide:

Use this guide while briefing office and administrative workstation setup.

Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** 911
- **Medical Facility / Treatment:** EVANS hospital
- **Evacuation / Muster Point:** Airfield Operations
Primary Muster Point: Airfield Observing Point.

Secondary/ Alternative Muster Point: Main parking lot located directly across the street from the main building.

(or as directed)

2. Administration Building

Primary Muster Point: Main administration parking lot.

Note: All personnel must immediately report to their designated muster point upon hearing that evacuation is required and remain there until an all-clear is officially communicated by safety personnel or leadership.

- **Shelter in Place:** Not entered
- **Active Shooter Response Methods:** In an active shooter situation, follow the Run, Hide, Fight protocol. First, if an escape route is available, run immediately, leave your belongings behind, keep your hands visible, and call 911 once safe. If evacuation is impossible, hide by locking and barricading doors, silencing phones, and staying completely out of sight. As an absolute last resort when your life is in imminent danger, fight the attacker aggressively using improvised weapons and teamwork to neutralize the threat.
- **Adverse Weather Shelter:** During severe or adverse weather, immediately move to the designated shelter area within the facility, staying away from windows, exterior doors, and large open rooms. Remain inside and low to the ground, keeping emergency communication devices ready, and wait until management or emergency personnel issue an official all-clear before exiting.

Emergency Equipment and Safety Board

Safety Bulletin Board Location: Location posted second floor near coffee maker.

In the event of an emergency, fire extinguishers on the second floor are located near both front and rear exits, while first-floor extinguishers are positioned at every exit and inside the armory. Additionally, an emergency eyewash station is located on the first floor near the armory and the garage door. Finally, the AED's are located first floor near the armory and second floor in the rightmost kitchen cabinet.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:

Enter local gate hazards, base-specific traffic concerns, spotter rules, and where vehicle training is documented.

Motorcycle Safety Representatives / Traffic Contacts:

Unit Motorcycle Safety Representatives:

SSgt Summerville

Cpt Thompson

Local Rider Briefing & Area Hazards (Colorado Springs / Local Installations):

Local Hazards & Environmental Conditions: Mountain driving risks including loose gravel, potholes, rapid weather changes (rain, hail, extreme temperature shifts), high winds, and local wildlife hazards (deer, elk, bears).

Mandatory Briefings & Tracking: Complete Initial Commander/MSR Safety Briefing, annual Preseason Kickoff Briefing, and maintain an active account in MUSTT/AFSAS per DAFI 91-207. Repeat briefing upon PCS or commander changes.

Training Cadence: Initial training required prior to operating; Intermediate training within 60 days to 1 year; Refresher training required every 5 years.

Mandatory PPE (On/Off Duty & On/Off Base): DOT/Snell/UNECE certified helmet fastened under the chin; ANSI Z87.1 approved eye protection or full-face shield; long-sleeved shirt/jacket; long trousers; full-fingered leather or abrasion-resistant gloves; over-the-ankle sturdy footwear.

LS-201

Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

Safety Reporting ... All In One Place

SAFEREP APP!

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- "Near miss" events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.
