Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 113 Maintenance Squadron

Work Center: AIS

Work Area / Office Symbol: CMF/MXMVT

Phone: 312-857-6298

Supervisor: Michael Touchette, MSgt, Avionics Back Shop Supervisor

Reviewer: Scott Morrill

Review Date: 2026-05-17

Effective Date: 2026-05-19

Work Center Overview

The Avionics Intermediate Shop (AFSC: 2A0X1) Personnel perform and manage avionics test stationfunctions and activities for F-16 aircraft. Personnel operate, inspect, maintain, program, and calibratecomputer and manually operated avionics test equipment, support equipment, and aircraft avionicssystems components. Certain components that are tested emit radio frequency radiation. Electricalhazards include high voltage and high amperage. Repair actions include soldering, utilization of hazmatfor cleaning and adhesive purposes. Compressed Air and Compressed Nitrogen are used for cleaningand testing purposes. Personnel also process supplies through the supply system. This requires loadingand unloading wooden crates and reusable cardboard containers of often heavy weight. Mobility requirements involve pallet building.

Work Area Hazard Analysis / JHA Notes

- **RF emitter maintenance:** Primary hazards include radiofrequency radiation, hazardous noise, heat/cold stress, and potential exposure to ethyl benzene and crystalline silica. Required controls include

EMF warning signs and annual EMF, hearing-protection, and thermal-stress training; use nitrile gloves with a breakthrough time greater than four hours (over 11 mil thickness), and replace damaged or degraded gloves. Use both earmuffs (NRR 29) and disposable foam earplugs (NRR 19.1) as required; the process may occur on the flightline with engines running and warning barriers in place.

- **Soldering:** Hazards include formaldehyde, lead, silver, and tin. Personnel require initial and annual formaldehyde and lead training, initial and updated Hazard Communication training, and heat-resistant gloves; these gloves are not chemical-protective and must be replaced if damaged or chemically saturated.

- **Box packing/loading and FOD walks:** Packing and loading presents forceful-exertion hazards and requires initial and annual ergonomic training; pallet jacks, dollies, and hydraulic lifts are used for heavy parts. FOD walks expose personnel to aircraft noise and heat/cold stress; hearing and thermal-stress training, earplugs, and earmuffs are required.

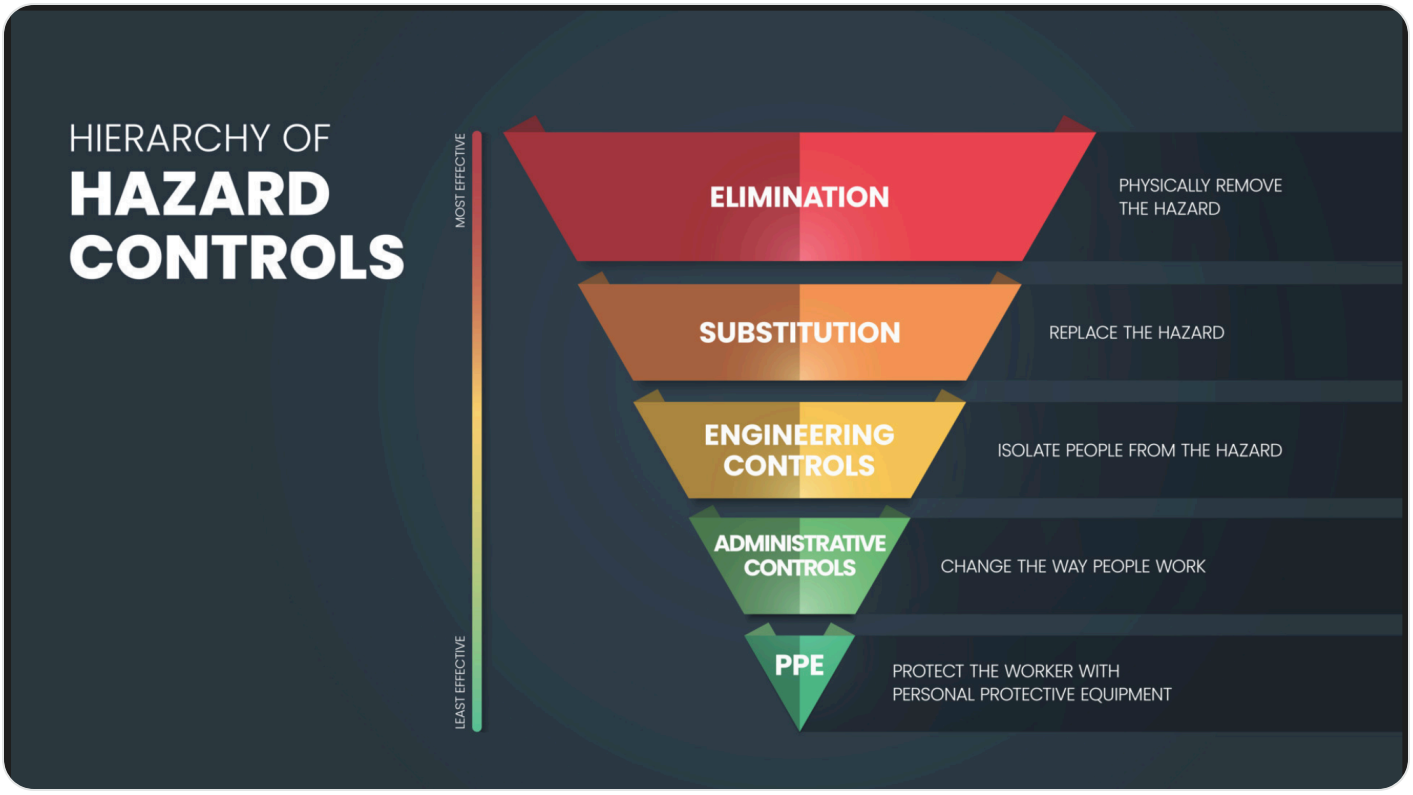

- **Special restrictions:** Document required training on AF Form 55 or equivalent, inspect, clean, maintain, and replace PPE as needed, and follow Bioenvironmental Engineering work/rest or warming-cycle guidance. Listed controls are considered adequate only when properly maintained and used; the assessment must remain posted on the health and safety board until replaced.

Required Training Topics

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

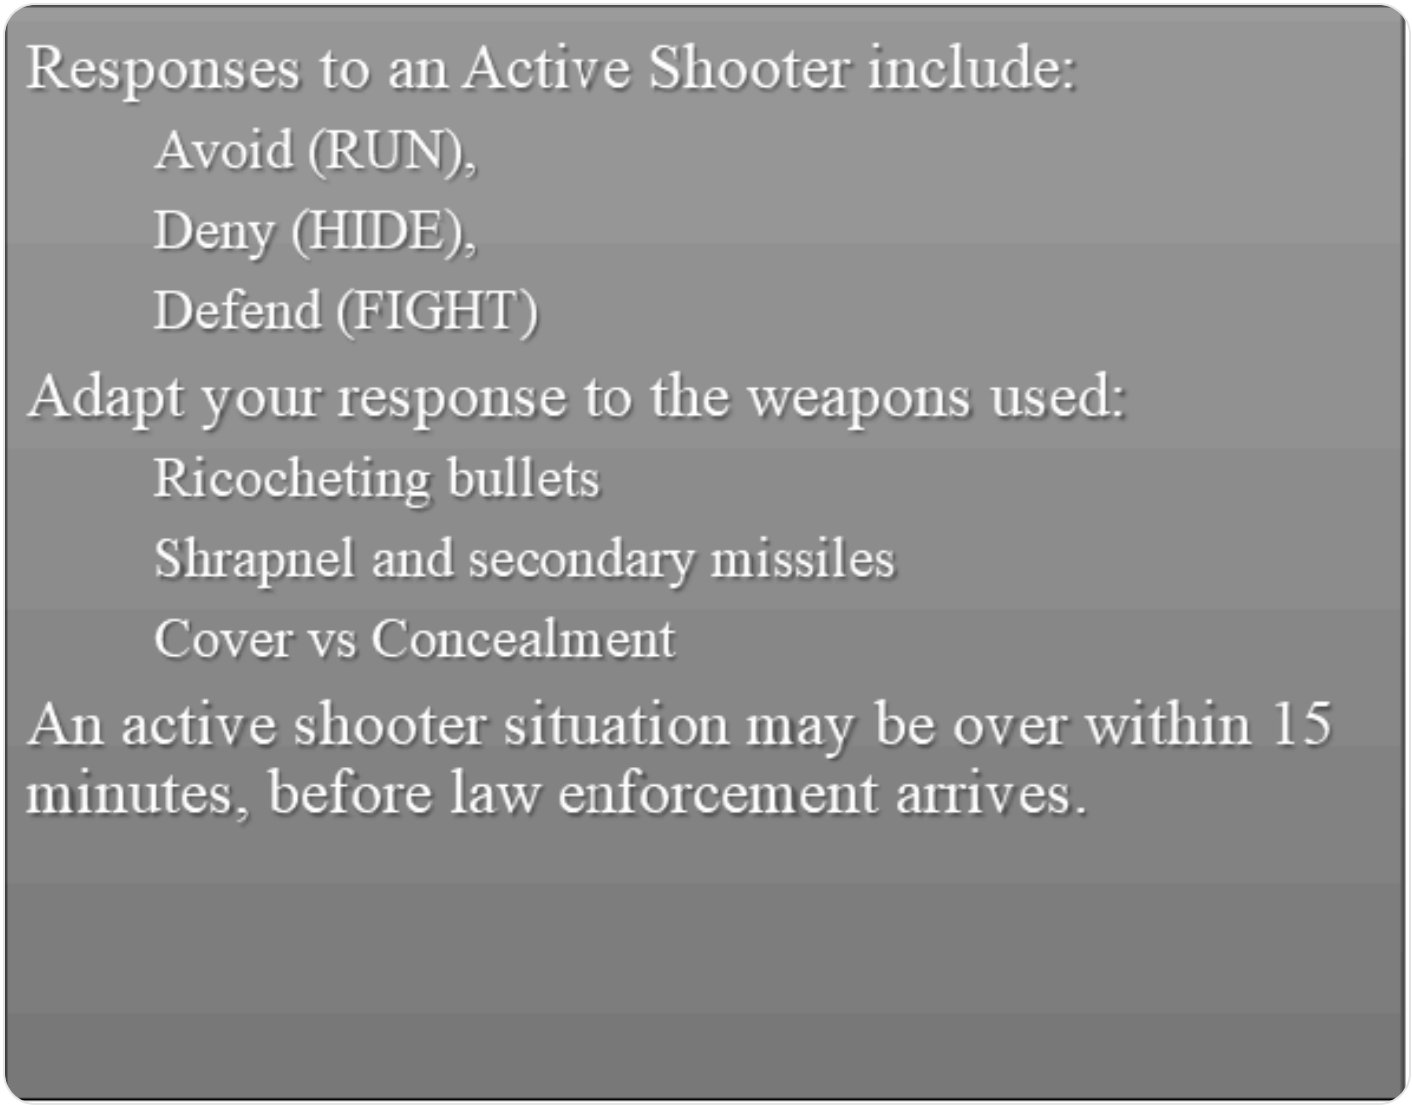

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

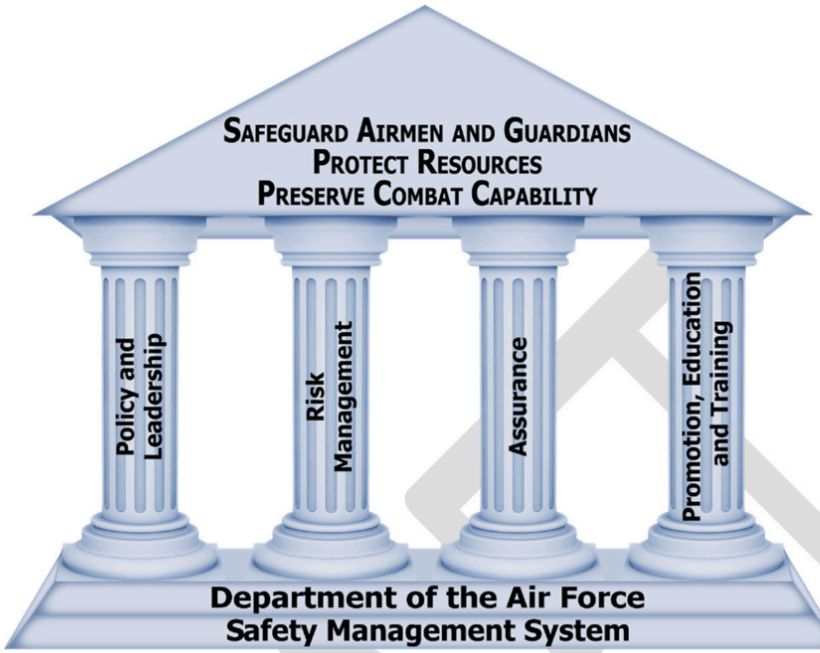

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter’s location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control

- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

The following modules apply to this work center and should be reviewed with trainees before task performance.

Hazardous Energy ControlHazard CommunicationHearing ConservationConfined Space ProgramCPR TrainingElectromagnetic Field TrainingLadder SafetyActive Shooter ResponseGovernment Vehicle / Utility Vehicle UseManual Lifting and Material HandlingFire Protection and PreventionErgonomics / Office and Administrative Workstation SafetyJewelry / Loose Articles RestrictionsThermal Stress / Heat and Cold Stress

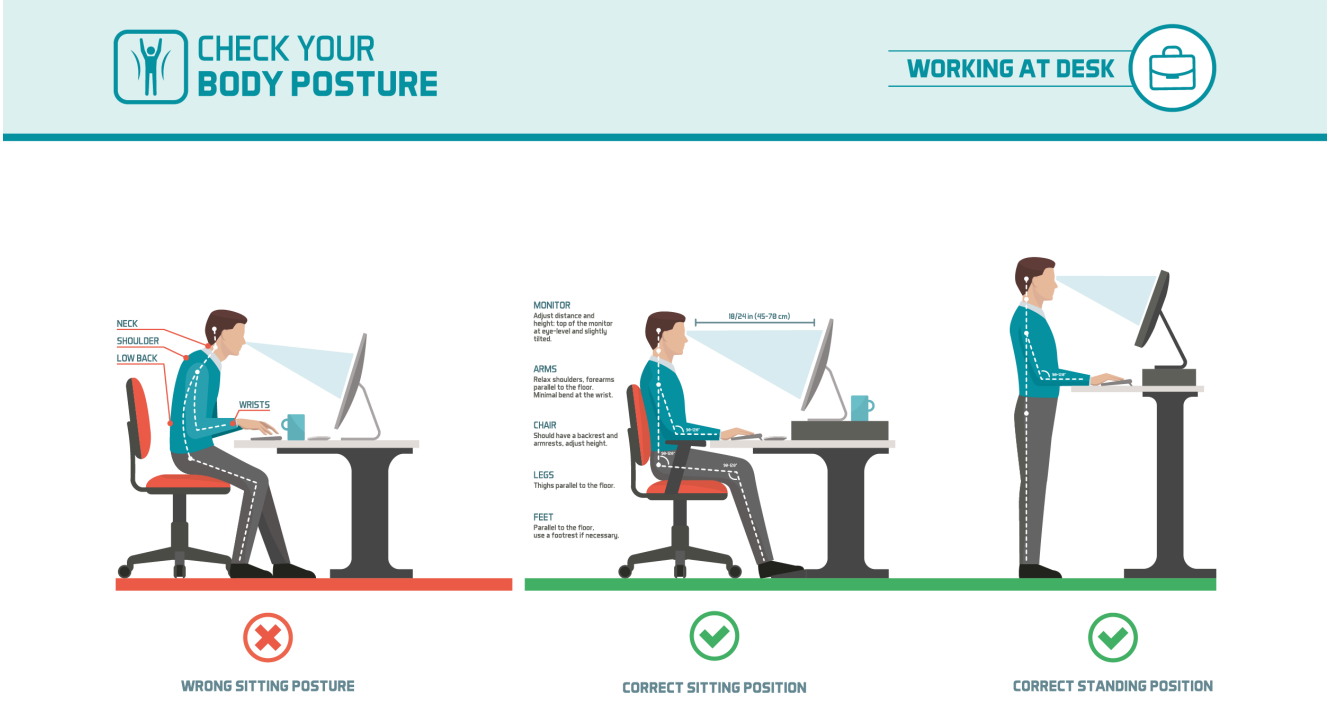

- **Hazardous Energy Control:** DAFMAN 91-203 establishes a formal Hazardous Energy Control Program with dedicated training, documented procedures, and periodic self-inspections before servicing or maintenance work is performed. Train authorized employees on hazardous energy sources, magnitude, and isolation methods; affected employees on the purpose and use of procedures; and other nearby employees on restart/reenergization prohibitions. Retrain when assignments, equipment, processes, or procedures change, or when inspections show gaps. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards Chapter 21; 29 CFR 1910.147 - The control of hazardous energy (lockout/tagout)
  Link to training: https://usaf.percipio.com/linked-contents/cb0441b5-773d-4f09-859f-b832a2c205da/landing

- **Hazard Communication:** Employees potentially exposed to chemical hazards must complete HAZCOM training upon initial assignment and whenever a new hazard or chemical is introduced or new tasks create new hazards. Supervisors must ensure SDS access for chemicals used in the work process. Provide effective training at initial assignment and whenever a new chemical hazard is introduced. Cover where hazardous chemicals are present, the written program, labels and SDS access, how releases are detected, hazard types, protective measures, emergency procedures, and required PPE. AFI 90-821 - Hazard Communication (HAZCOM) Program; 29 CFR 1910.1200 - Hazard Communication
- **Hearing Conservation:** Hazardous noise concerns must be evaluated and controls recommended through the occupational health risk assessment process. Use the AF Hearing Conservation Program as the training and control basis when shop noise hazards are identified. Provide a hearing conservation training program for employees exposed at or above the action level, repeat it annually, and update it when equipment or work processes change. Cover hearing effects, protector selection and care, and the purpose of audiometric testing. AFI 48-127 - Occupational Noise and Hearing Conservation Program
- **Confined Space Program:** Employees entering confined spaces must be trained to safely accomplish assigned duties and rescue procedures for the specific permit-required space entered. Safety observers and attendants must also be trained on rescue procedures for each type of permit-required confined space. Train affected employees before first assignment, before duty changes, when permit-space operations introduce new hazards, and when deviations or inadequate knowledge are identified. Training must establish proficiency and be documented by employee, trainer, and date. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards Chapter 23; 29 CFR 1910.146 - Permit-required confined spaces
  Link to training: https://usaf.percipio.com/linked-contents/98e905dc-f566-4212-9bbc-9bc72499def6/landing
- **CPR Training:** CPR online training must be completed from the red cross link. Hands-on class is scheduled thru the UTM.
  Link to training: https://www.redcrosslearningcenter.org/s/online-class-registration?Id=a65Vx000007CYxxIAG
- **Electromagnetic Field Training:** EMFR AIS Specific Training is located: One Drive General AIS Y Xfer/AIS Original/Training Media/HAZCOM/AIS JSTO/EMFR folder AFI48-109_113MXGSUP_1Oct2025 is local guidance located in same folder.
- **Ladder Safety:** ANG Ladder Safety Training is located: One Drive/ General/AIS Y Xfer/AIS Original/Training Media/HAZCOM/AIS JSTO/AIS Specific Training folder The link below brings you to the source for downloading...
  Link to training: https://usaf.percipio.com/linked-contents/202f2d2b-31ce-4409-bc86-3c48f1bb51d5/landing
- **Active Shooter Response:** JB Andrews Active Shooter Training is located: One Drive General AIS Y Xfer/AIS Original/Training Media/HAZCOM/AIS JSTO/AIS Specific Training folder
- **Government Vehicle / Utility Vehicle Use:** Document local licensing, route restrictions, spotter use, rollover protection, and unit-specific operating rules. OSHA 2254 does not provide a direct GOV/UTV training excerpt here. Local GOV, GVO, or UTV operating rules and licensing expectations
- **Manual Lifting and Material Handling:** Supervisors must ensure thorough training on proper manual lifting techniques, required PPE, and the use of manual lifting devices. Training must use both verbal and written materials, include practice on proper motions, and be documented under DAFI 91-202. Cover shop-specific lifting limits, two-person lift triggers, hand truck and lifting-device use, and when supervisors require assisted handling. No direct OSHA 2254 standalone manual-lifting module is mapped here. Manual lifting techniques and available lifting devices
- **Fire Protection and Prevention:** Facility managers and supervisors must establish and maintain a fire prevention training program through the JSTO so employees understand their fire prevention and protection responsibilities in their work areas. This is fulfilled through job safety training and documentation under DAFI 91-202. Review the fire prevention plan with employees when the plan is developed, when responsibilities change, and when the plan changes. If extinguishers are

provided for employee use, train employees on the general principles of extinguisher use and the hazards of incipient-stage firefighting at initial assignment and at least annually. Train designated users on the specific equipment they are expected to use. Local extinguisher, pull station, and fire reporting procedures

- **Ergonomics / Office and Administrative Workstation Safety:** Use DAFMAN 91-203 office safety and ergonomics guidance to brief administrative and computer-based workers on musculoskeletal disorder risk factors, workstation adjustment, posture, repetitive motion controls, manual handling of office materials, and supervisor follow-up for ergonomic concerns. Cover workstation setup, chair adjustment, monitor height and distance, keyboard and mouse position, neutral posture, repetitive motion, micro-pauses or task variation, safe lifting of office supplies, file cabinet and storage safety, early reporting of discomfort, and how to request a BE ergonomic assessment when needed. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards; OSHA ergonomics guidance; local Bioenvironmental Engineering or Occupational Health guidance
- **Jewelry / Loose Articles Restrictions:** Use local shop rules and hazard analysis to define where jewelry, loose clothing, or unsecured items are prohibited around moving parts, climbing, electrical work, or snag hazards. Workplace-specific limits on rings, necklaces, watches, and loose items
- **Thermal Stress / Heat and Cold Stress:** Use the occupational health risk assessment, local BE recommendations, and supervisor hazard controls to brief personnel on thermal stress hazards and controls for hot, cold, humid, outdoor, flight line, industrial, or PPE-intensive work areas. Cover heat stress, cold stress, WBGT or locally directed exposure monitoring, acclimatization, hydration, work/rest cycles, buddy checks, PPE or clothing considerations, symptom recognition, supervisor notification, and emergency response actions for suspected heat illness or cold injury. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards; DAFI 48-145 - Occupational and Environmental Health Program; local Bioenvironmental Engineering or Occupational Health guidance

Ergonomics Workstation Posture Guide:

Use this guide while briefing office and administrative workstation setup.

DAFI 48-145

Required Documents

- CA-10
  What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.
- DAF Form 457
  Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or procedures in the workplace.
- DAFVA 91-209 **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
  Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations.
  Location Posted: AIS front office, Bldg. 3109 Room 130, on the shop safety board.
- LS-201
  Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** Dial 911 which will reach Prince Georges County Police.
  Dial 301-98-9911 to reach JB Andrews Security Forces
- **Medical Facility / Treatment:** Malcolm Grow Medical Clinics and Surgery Center
  1060 W Perimeter Rd, Joint Base Andrews, MD 20762
  (888) 999-1212
- **Evacuation / Muster Point:** Primary: AIS room 131 exit thru the NW double door

  Alternate: AIS room 130 exit thru the W double door

  Assembly point: Cross the rear parking lot to the North and assemble at the Gazebo
- **Shelter in Place:** In the event of a Shelter in Place announcement, personnel are directed to assemble in Building 3109 Men's Locker Room (Rm. 112)
- **Active Shooter Response Methods:** Avoid, Deny, & Defend!

  Mass email notification the message will be "Active Shooter on JBA/Base Lockdown - TAKE COVER" followed by the last known threat area when confirmed
  – Internal PA System within some facilities
  – Follow instructions, take immediate actions
  Giant Voice
  “Lockdown,Lockdown,Lockdown.”
  All base personnel should implement base lockdown procedures
  Things to keep in mind:
  Secure your building exterior doors immediately; No one in, No one out!
  • Be aware of your surroundings and any possible dangers
  • Take note of the two nearest exits in any facility you visit
  • Leave an area if you feel uncomfortable or something does not seem right
- **Adverse Weather Shelter:** In the event of Tornado, Lightning, Hail, Flood, or severe weather; direction will be provided via:

- Giant Voice announcements
- Ad Hoc notifications
- Hand held radio and phone

If directed to Shelter in Place, personnel will gather in Building 3109, Men's Locker Room (Rm. 112)

No evacuation route image uploaded.

Emergency Equipment and Safety Board

Safety Bulletin Board Location: AIS room 130 on the East Wall

List fire pull stations, extinguishers, power cutoffs, eyewash stations, AEDs, foam systems, and any local fire/emergency equipment notes.

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

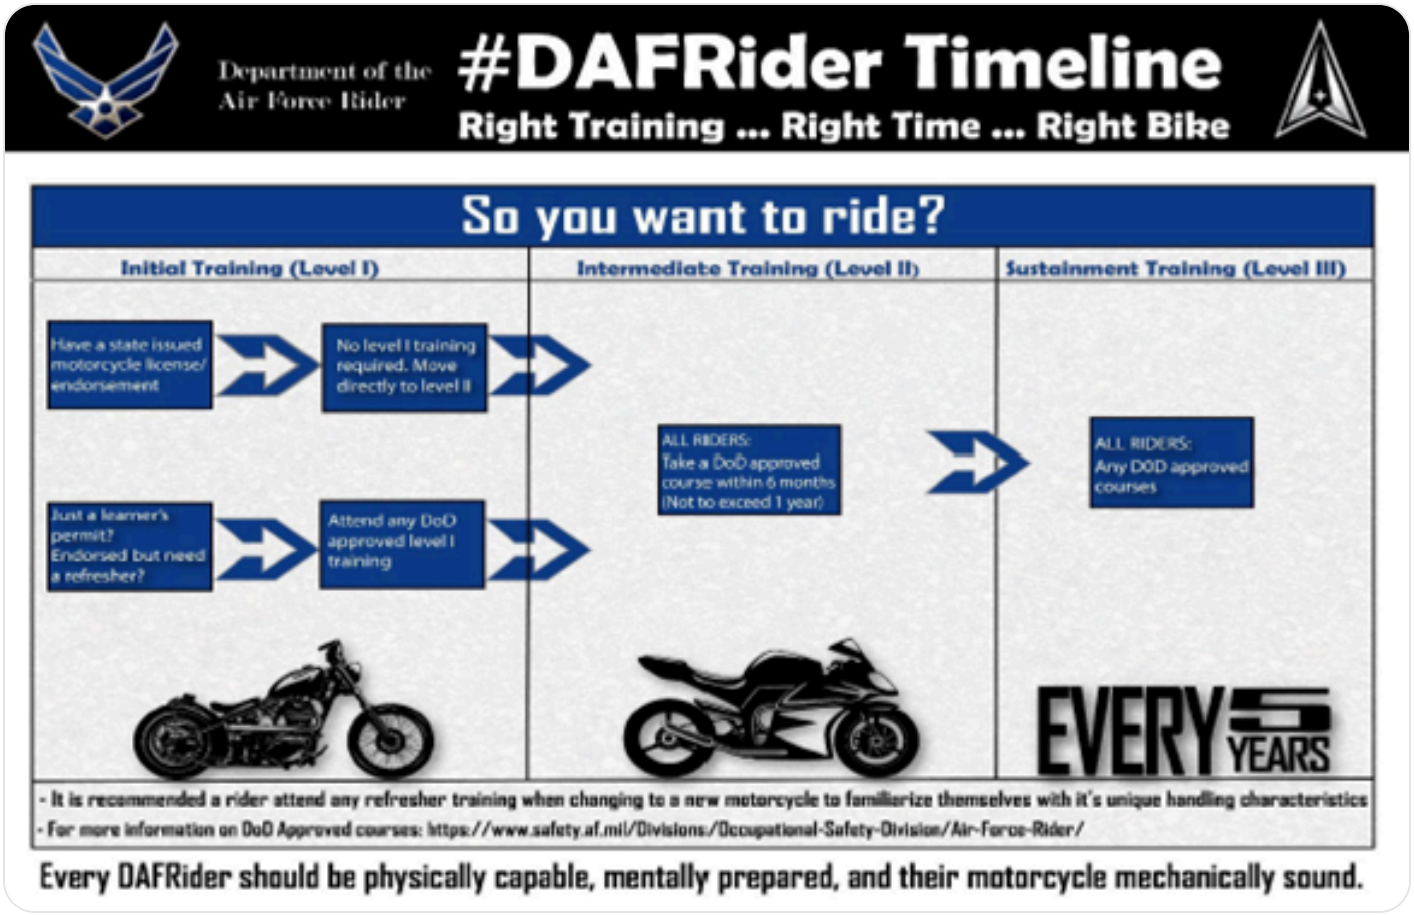

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:
Main Gate: 24 / 7
-Virginia Gate: 0500 - 2100
-Pearl Harbor : M-F
0600-0900 (Inbound)
& 1500-1800(Out)

On Base Cautions:
Seatbelts, Pedestrians, Joggers, Cyclists, Explosive Transport Routes, Restricted Areas, and Ramp Freezes

Motorcycle Safety Representatives / Traffic Contacts:
Andrews Motorcycle Requirements
Go the the Wing Safety Office Bldg 3252 (240-857-5039)
Safety personnel will help you set up a MUSTT account and explain necessary training to ride on the installation.

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

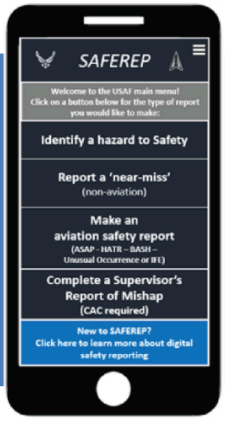

Safety Reporting … All In One Place

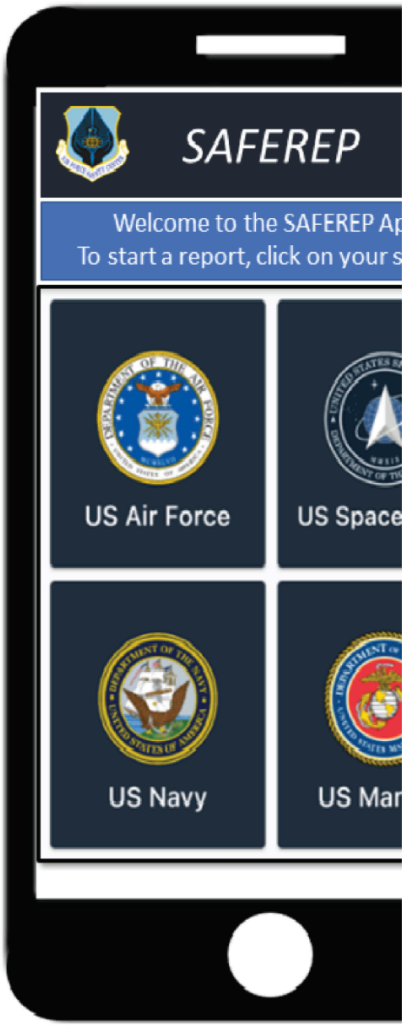

SAFEREP APP!

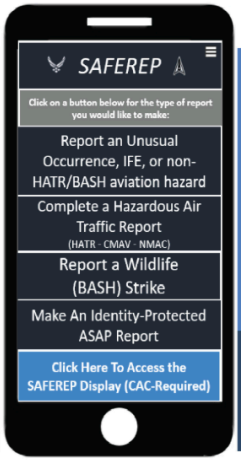

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- "Near miss" events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.

SAFEREP

Download to your mobile device from your preferred App Store
