

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: Detachment 2

Work Center: DLP

Work Area / Office Symbol: COMM/CSS/OPS

Phone: 705-494-2011 x6573

Supervisor: Alex Gil/ TSgt/ USR

Reviewer: SSgt Tydings, Garrett

Review Date: 2026-08-18

Effective Date: 2026-08-18

Work Center Overview

Detachment 2 is assigned to First Air Force and is located in North Bay, Ontario, Canada. The detachment consists of active duty uniformed members including: aerospace control and warning operators, communications personnel, personnel specialists, knowledge operations manager, and a medical liaison.

Work Area Hazard Analysis / JHA Notes

Ergonomics/Office Safety (Office Hazards, Strain, Human Error), Slips, Trips, and Falls, Electrical (Shock, Short Circuit, Fire, Static/ESD), File Cabinets, Material Handling, Sharp Tools, Housekeeping, Lighting, Storage Areas

Required Training Topics

Workplace Hazards
Personal Protective Equipment
Emergency Action and Fire Prevention
Reporting Unsafe Equipment, Conditions, or Procedures
Mishap, Occupational Injury, and Illness Reporting
CA-10 and LS-201
DAF Traffic Safety Program
DAFVA 91-209 Location and Content
DAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

HIERARCHY OF **HAZARD CONTROLS**

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control

- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

The following modules apply to this work center and should be reviewed with trainees before task performance.

Government Vehicle / Utility Vehicle Use Active Shooter Response Manual Lifting and Material Handling Fetal Protection Program

- **Government Vehicle / Utility Vehicle Use:** Members utilizing RCAF GOV must complete Canadian Armed Forces (CAF) Safe Driving Course on DWAN.
Link to training: https://dln-rad.sabacloud.com/Saba/Web_spf/CA3P1PRD002/app/me/ledetail;spf-url=common%2Flearningeve
- **Active Shooter Response:** Use local emergency response procedures, shelter locations, and mass notification methods applicable to the duty location. Brief personnel on how to recognize an active shooter event, how to summon help, and how to apply local run-hide-fight guidance based on the facility layout. Installation emergency management guidance / local procedures
- **Manual Lifting and Material Handling:** Provide verbal and written guidance on manual lifting, lifting devices, and local reporting actions for strain or overexertion symptoms. Train workers on proper lifting techniques, team lifting, load assessment, and use of lifting aids to reduce musculoskeletal injury risk. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 20

- **Fetal Protection Program:** Use occupational and environmental health guidance to discuss declaration options, exposure review, and local work restriction procedures. Provide job-specific hazard awareness for reproductive health risks where occupational exposures may affect pregnant workers or fetuses. DAFMAN 48-146

Required Documents

- [CA-10](#)
What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.
- [DAF Form 457](#)
Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or procedures in the workplace.
- [DAFVA 91-209](#) **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations.
Location Posted: The AFVA is posted on the Safety Bulletin boards within the facility.

Review the location and content of Air Force Visual Aid (AFVA) 91-209, Air Force Occupational Safety and Health Program (usually on the safety bulletin board)

- [LS-201](#)
Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** Emergency On-Base Fire, Medical & Police: 911
Emergency Off-Base Fire, Medical & Police: 911
Non-Emergency Crime: 705-494-2011 Ext. 2188
CFHA Emergency After Hour Response Service: 1-800-903-2343
- **Medical Facility / Treatment:** Acute Care Services (ACS): For emergencies, dial 911. For other acute illnesses or injuries sustained during work hours, employees should seek treatment at the 31 CF Health Services Centre Detachment, located at 154 Jaeger Way, Building 154 Hornell Heights, Ontario P0H 1P0.

Emergency Room: Emergency services are available North Bay regional Health Centre at 50 College Dr, North Bay, ON P1B 5A4.

Civilian employees may choose to seek medical care from any provider, but they must comply with their health care plan's provisions. Civilian employees are encouraged to seek duty-related medical care from nearby military medical facilities, as these are typically the closest and help to reduce Workers' Compensation expenses.

- **Evacuation / Muster Point:** Primary Evacuation Location: Parking lot closest to main turn style, within the GRA

Secondary Evacuation Location: Parking Lot across from Building 7A

1. Secure all classified materials.

2. Leave lights on.
3. Close doors, but keep doors unlocked.
4. Ensure that all building occupants received the notification to evacuate through means of Fire Alarm, Phone, Radio, Word of mouth, Etc.
5. Evacuate to your Primary or Alternate Evacuation Location as directed by the Fire Dept or the Incident Commander. The highest-ranking member shall ensure an orderly evacuation. No critical operations. All personnel will evacuate.
6. Do not transmit on radios within 300 feet of the building (bomb threat situations).
7. Highest ranking member will assemble all Safety Personnel at the Evacuation Location and account for all personnel.
8. Notify the Command, Fire Dept. or Incident Commander of your Personnel Accountability.
- **Shelter in Place:** The SIP Room is your personal work center, or as defined by CADS leadership.
 1. Alert all building occupants to complete their Building Shelter-In-Place tasks.
 2. Get all your personnel inside the building.
 3. Close all exterior and interior doors. Close and lock all windows.
 4. Shut down the building HVAC system.
 5. Duct tape plastic sheeting around all exterior windows and vents.
 6. Duct tape around exterior doors. Place wet towels over the crack at the bottom of the exterior doors.
 7. Secure all classified materials.
 8. Move to the most interior room(s) in your building. This is your SAFE ROOM.
 9. Seal the safe room doors with duct tape.
 10. Once the Building Shelter-In-Place tasks have been completed, notify Command. Report your building number and the number of personnel that you have sheltered.
 11. Follow all emergency directions provided by the Command Post.
 12. Tune to the local radio or television for additional information.
 13. Perform First Aid as necessary.
 14. Wait for the "ALL CLEAR" to be issued by the Command Post before resuming normal operations. Evacuate the building. Emergency Response personnel will determine if the building needs to be ventilated.
- **Active Shooter Response Methods:** Lock down the building, stay away from doors and windows.
- **Adverse Weather Shelter:** Not entered

No evacuation route image uploaded.

Emergency Equipment and Safety Board

Safety Bulletin Board Location: Located outside CSS room, to the right of the book shelves.

Fire extinguishers and fire alarms are located in every hallway within the DLP. AEDs are located at the entrance of the Ops floor and first floor foyer next to Comm room main entrance.

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:

Local Traffic Hazards:

North Bay has numerous road hazards, including unimproved dirt roads, paved roads with poor shoulders, and adverse weather conditions such as wind/dust storms and snow/ice, which can lead to vehicle rollovers. Rollovers on Highway 11, especially during snow/black ice conditions. Personnel should reduce speed and prepare for slick roads. It is recommended to check road conditions before traveling, especially in winter weather. Road reports can be accessed at <http://511on.ca/>.

Motorcycle Safety Representatives / Traffic Contacts:

Motorcycle Operator Training:

Military personnel who operate or intend to operate a motorcycle on a roadway, government-owned or leased motorcycles, and Air Force civilian personnel required to operate a motorcycle must complete motorcycle safety training. This training is mandatory for motorcycles with engine displacements of over 49cc unless specified otherwise by state, territory, host nation, or applicable SOFA requirements.

Motorcycle safety training does not substitute for state licensing requirements. Riders must possess a valid motorcycle license, endorsement, or rider's permit before operating a motorcycle on roadways, including travel to and from training locations.

All newly assigned personnel must complete the commander's initial motorcycle safety briefing within 30 duty days of assignment or identification as a rider. Personnel transferring out will complete out-processing through the motorcycle safety representative to transfer their record in the MUSTT/Training module. Motorcycle riders are required to attend an annual/pre-season motorcycle safety briefing.

Please contact USR if planning to operate motorcycle.

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

Safety Reporting ... All In One Place

SAFEREP APP!

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- “Near miss” events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.
