Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 436 CES

Work Center: Emergency Management

Work Area / Office Symbol: CEX

Phone: 677-6212

Supervisor: Brendan Tenkel, 1Lt, 436 CEX Flight Chief

Reviewer: TSgt Hoppler, Christopher

Review Date: 2026-11-10

Effective Date: 2026-11-10

Work Center Overview

The 436 R&EM flight is the 436 AW Commander’s Air Force Emergency Management (EM) program office of primary responsibility (OPR) and is the Installation Office of Emergency Management. The flight executes and assists in the training and education of people and protection of assets before, during, and after disasters, major accidents, civil emergencies, humanitarian operations, terrorist events, or hostile action at either home station or at a deployed location. Protection for personnel includes all assigned military, civilian (Department of Defense [DOD] and contract personnel), dependents, and guests. Flight personnel provide on-scene and Emergency Operations Center (EOC) command and control (C2) support, specialized CBRN detection, identification, sampling and may support contamination control and decontamination operations. The R&EM Flight provides guidance to installation units to mitigate the effects of disasters and hostile incidents and to ensure rapid response to and recovery from these incidents.

Work Area Hazard Analysis / JHA Notes

The 436 CES/CEX Flight has CBRN Identification, detection, and Decontamination equipment that may be hazardous if not properly used, maintained, and stored. Specific hazards include Calibration Gas, i.e. Carbon Monoxide, Chlorine, Nitrogen/Sulfur Dioxide, Nitrogen/Nitiric Oxide, Nitrogen/Anhydrous Ammonia. Reactive Skin Decontamination Lotion (RSDL). M-9 and M-8 CBRN detection Paper. Class 3B lasers. Radiological Test sources (cesium 137).

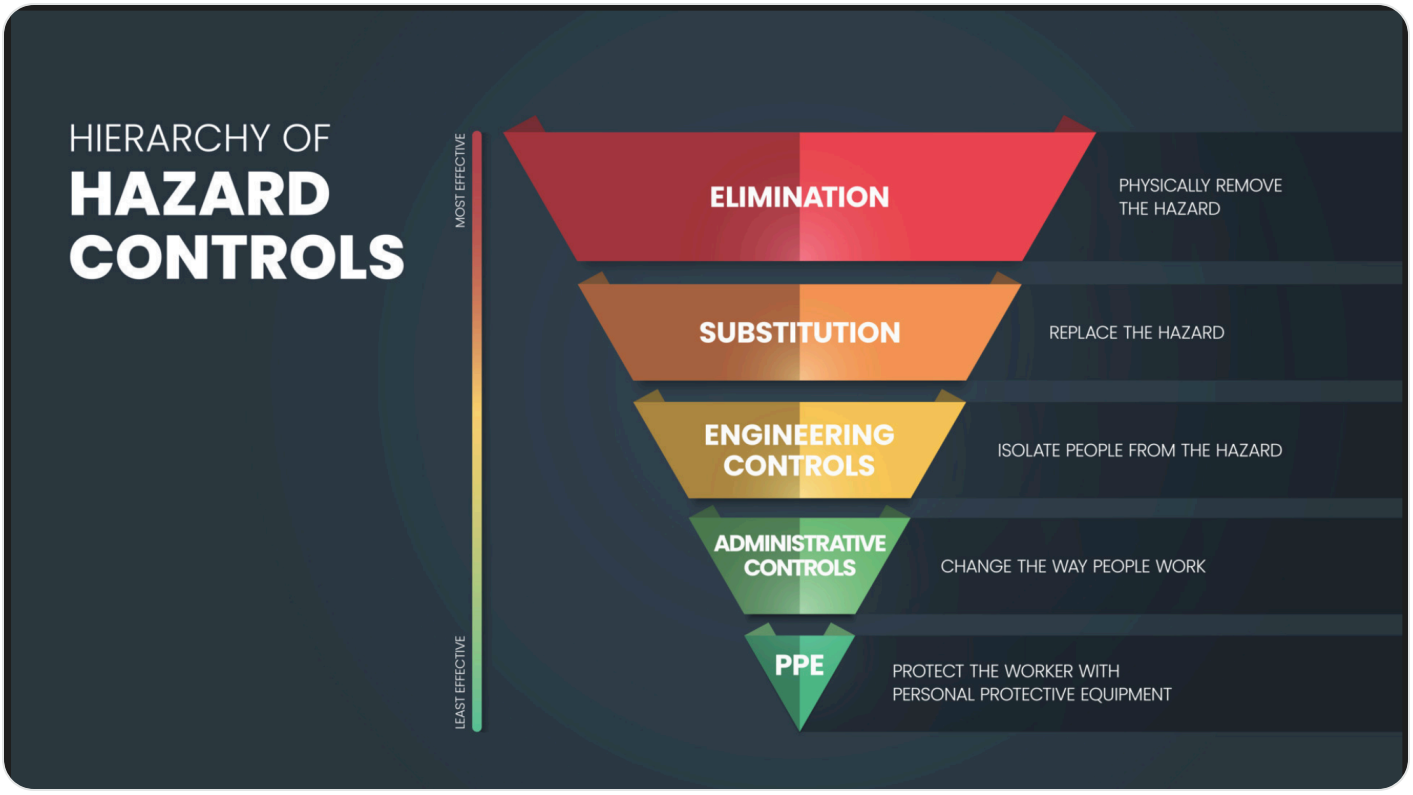

Required Training Topics

Workplace HazardsPersonal Protective EquipmentEmergency Action and Fire PreventionReporting Unsafe Equipment, Conditions, or ProceduresMishap, Occupational Injury, and Illness ReportingCA-10 and LS-201DAF Traffic Safety ProgramDAFVA 91-209 Location and ContentDAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

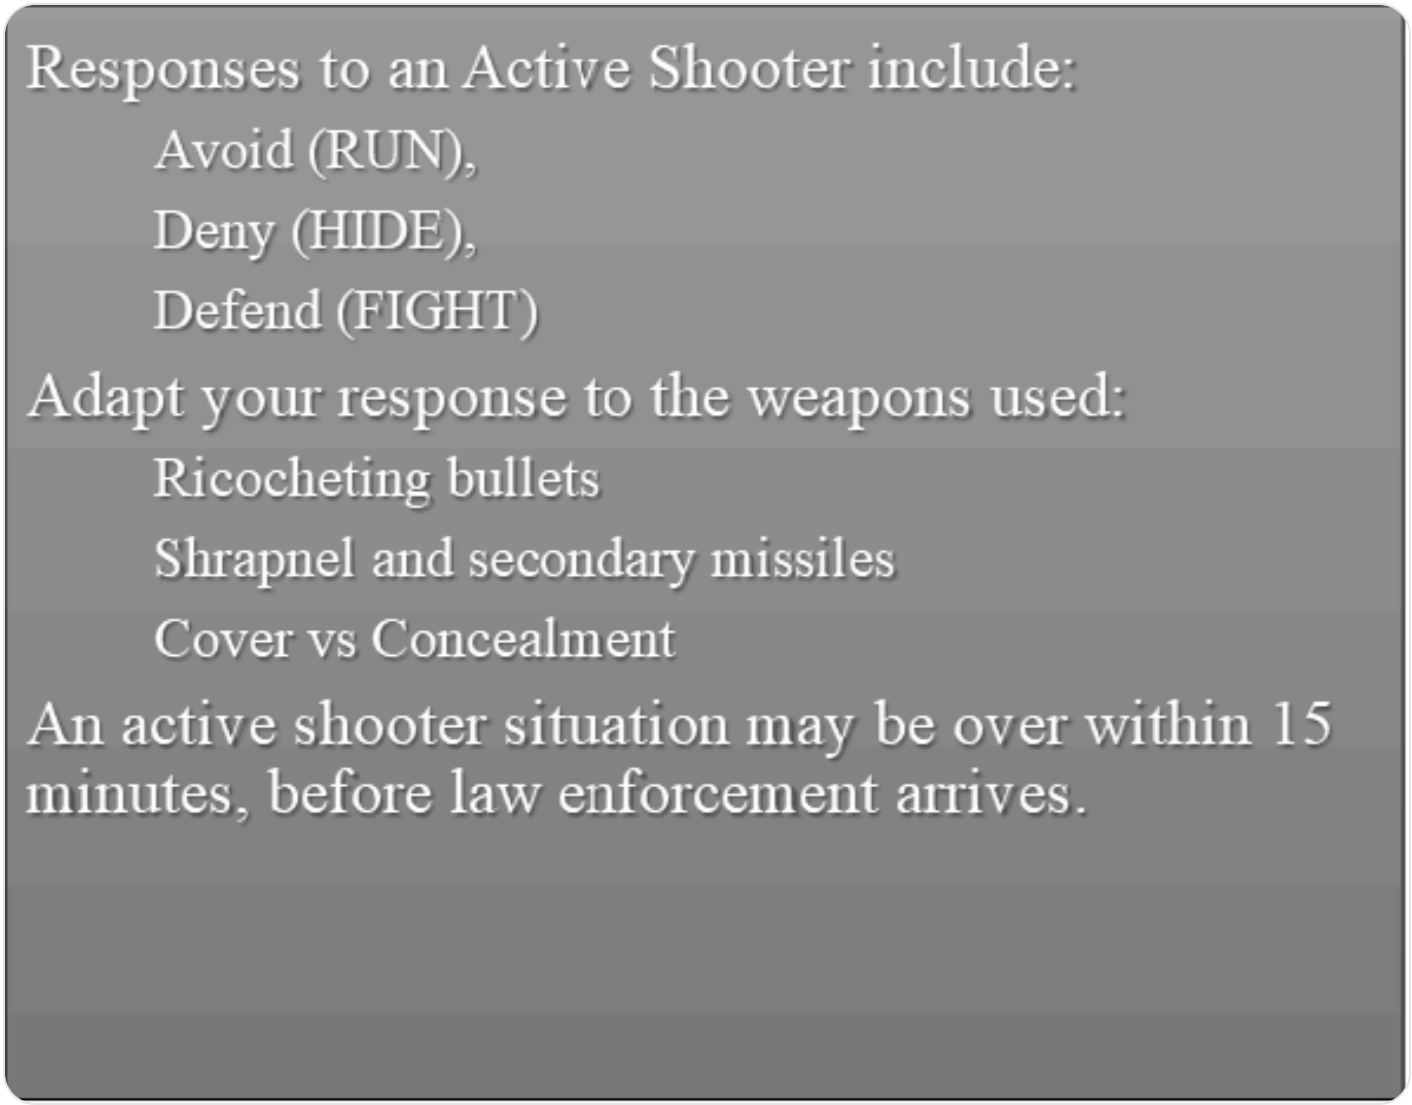

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

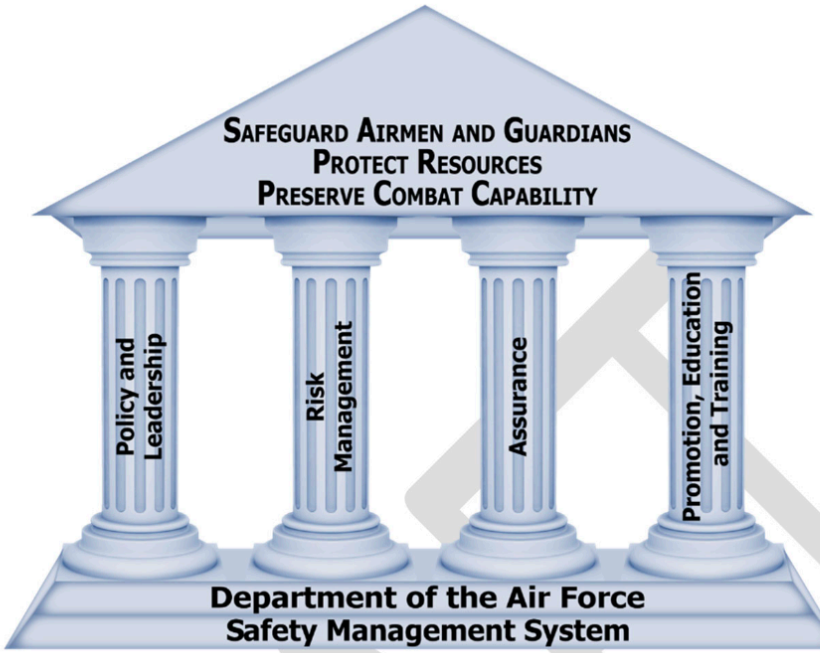

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter’s location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control

- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

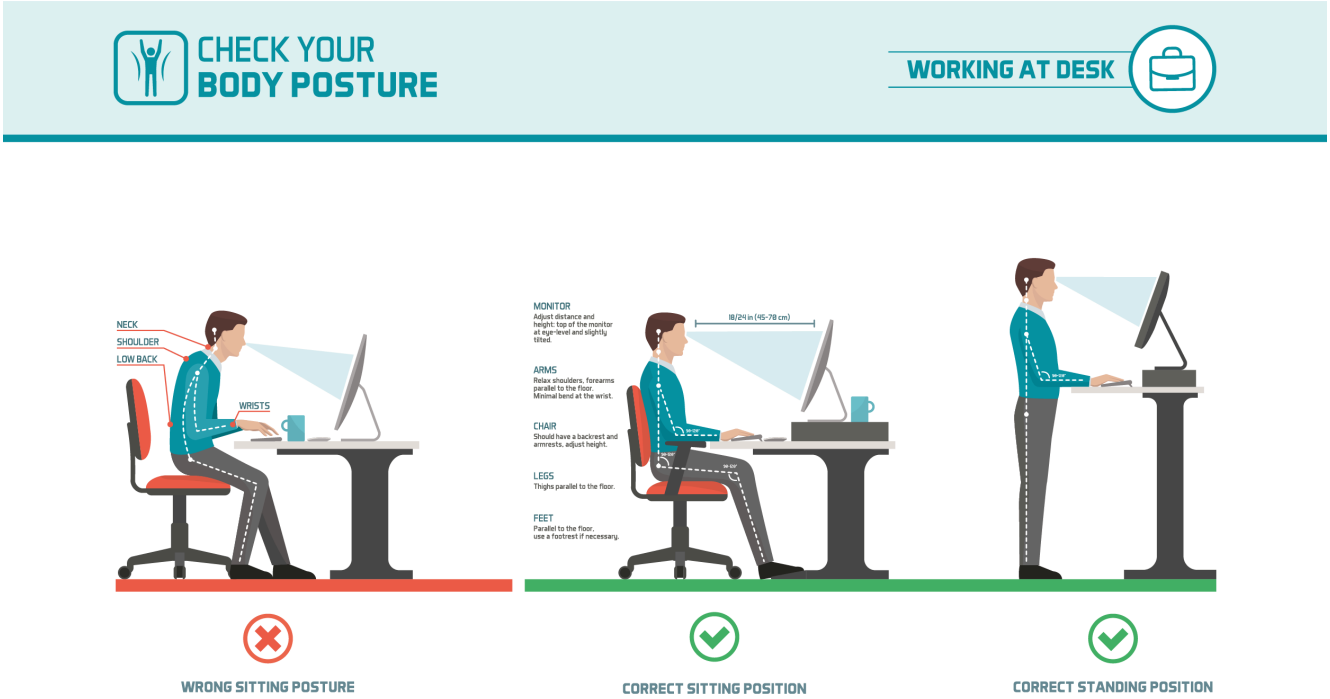

The following modules apply to this work center and should be reviewed with trainees before task performance.

Respiratory Protection ProgramCPR TrainingLaser Safety TrainingALARA Ionizing Radiation TrainingRisk Management FundamentalsPersonal Protective Equipment (PPE)

- **Respiratory Protection Program:** Document fit testing and occupational health training on AF Form 2767 and ensure wearers understand emergency-use limits, cartridge change-out, cleaning, and medical qualification requirements. Train users before respirator use and at least annually on why the respirator is necessary, how improper fit or maintenance can compromise protection, and how to inspect, don, doff, use, and store the respirator. DAFI 48-137; 29 CFR 1910.134 - Respiratory protection
- **CPR Training:** Ensure designated responders maintain current certification and understand location and use of local AED assets under the unit mishap prevention program. Provide CPR and AED training before assignment where required, and refresh qualification before expiration. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 1
- **Laser Safety Training:** Use local laser safety officer guidance and approved operating instructions to cover exposure limits, alignment procedures, and emergency actions. Provide laser hazard awareness, eyewear, posting, alignment, and beam-control training before personnel work with lasers or enter laser-controlled areas. DAFI 48-139

- **ALARA Ionizing Radiation Training:** Use local radiation safety office guidance to cover dose control, exposure tracking, and access requirements for designated radiation areas. Train personnel on the ALARA concept, exposure minimization, posting requirements, and emergency actions before working with ionizing radiation sources. DAFI 48-148
- **Risk Management Fundamentals:** Use the DAF risk management process to discuss local hazard reporting, supervisor involvement, and integration into routine tasks. Train workers to identify hazards, assess risk, implement controls, supervise the task, and re-evaluate controls during and after operations. DAFI 90-802; DAFPAM 90-803
- **Personal Protective Equipment (PPE):** Use the work-center JHA, BE occupational health assessment, manufacturer instructions, DAFMAN 91-203 Chapter 14, and local safety office guidance to identify PPE requirements. Supervisors must ensure PPE is provided, used, cleaned, inspected, maintained in sanitary and serviceable condition, and documented in JSTO training records. Cover eye and face protection, head protection, foot protection, hand protection, protective clothing, and respiratory or hearing protection when those programs apply. Train each affected worker on when PPE is necessary, what PPE is necessary, how to properly don, doff, adjust, and wear PPE, the limitations of assigned PPE, and the proper care, maintenance, useful life, and disposal of PPE. Require workers to demonstrate understanding and proper use before performing work requiring PPE, and retrain when workplace conditions, job assignments, PPE types, or worker knowledge gaps make prior training obsolete. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 14; 29 CFR Part 1910 - Occupational Safety and Health Standards (General Industry Standards) Subpart I; 29 CFR 1910.132; 29 CFR 1910.133; 29 CFR 1910.135; 29 CFR 1910.136; 29 CFR 1910.138

Ergonomics Workstation Posture Guide:

Use this guide while briefing office and administrative workstation setup.

Required Documents

- CA-10
  What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.
- DAF Form 457
  Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or procedures in the workplace.
- DAFVA 91-209 **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
  Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations.
  Location Posted: Enter where DAFVA 91-209 is posted for this work center.
- LS-201
  Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** 911
  BDOC: Primary 677-6664 Alt: 677-4401
  ECC: Primary 677-4401 Alt 677-6664
  Command Post: Primary 677-4201
  Fire Dept: Primary 677-441 Alt: 677-2154
  MDG: Primary 677- 2579/3253 Alt: 677-2529
  CAT: Primary 677-4226 Alt: 677 4229
  EOC: Primary 677-2085 Alt: 677-2069
  CE UCC - Primary 677-6035
- **Medical Facility / Treatment:** For all Emergencies (life, limb or eyesight) dial 911.

  During normal duty hours on weekdays, personnel are to report to
  Dover AFB Clinic for assessment and treatment of injuries suffered while on-the-job. Civilian employees may elect to receive treatment from their personal physician.
  If the injury or medical condition does not permit the injured person to first report to Dover AFBClinic, the individuals should be treated at the closest medical facility which in most cases will beBay Health Medical Center (otherwise known as Kent General Hospital) located in downtown Dover, contact information is: (302) 674-4700.
  The Base Clinic is located in Building 300. Also, advise member that the Base Clinic no longerprovides 24 hour emergency service. Make sure the individual understands the procedure to getmedical attention on and off duty as per TRICARE provider procedures (1-877-TRICARE or 1-877-874-2273).
- **Evacuation / Muster Point:** Personnel evacuating Bldg. 638 will take the most direct route to the CEX muster point, the athletic field directly across the street from Bldg. 638 or move to the designated location in line with the direction of responding agencies.
- **Shelter in Place:** The designated Shelter in place for Bldg. 638 is room number 5.
- **Active Shooter Response Methods:** Individuals should employ the Avoid, Deny, Defend response method. This strategy is adaptable to the specific situation and environment.
- **Adverse Weather Shelter:** The designated location for Severe Weather Sheltering for Bldg. 638 is room number 5.

No evacuation route image uploaded.

Emergency Equipment and Safety Board

Safety Bulletin Board Location: CBRN Training Classroom Entry/Exit.

First Aid kit - Room 7
HVAC Shut Off - Room 5
AED - CBRN Training Room
Fire Extinguisher - CBRN Training Room, Warehouse Door
Eye Wash - Bldg 639 Warehouse

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

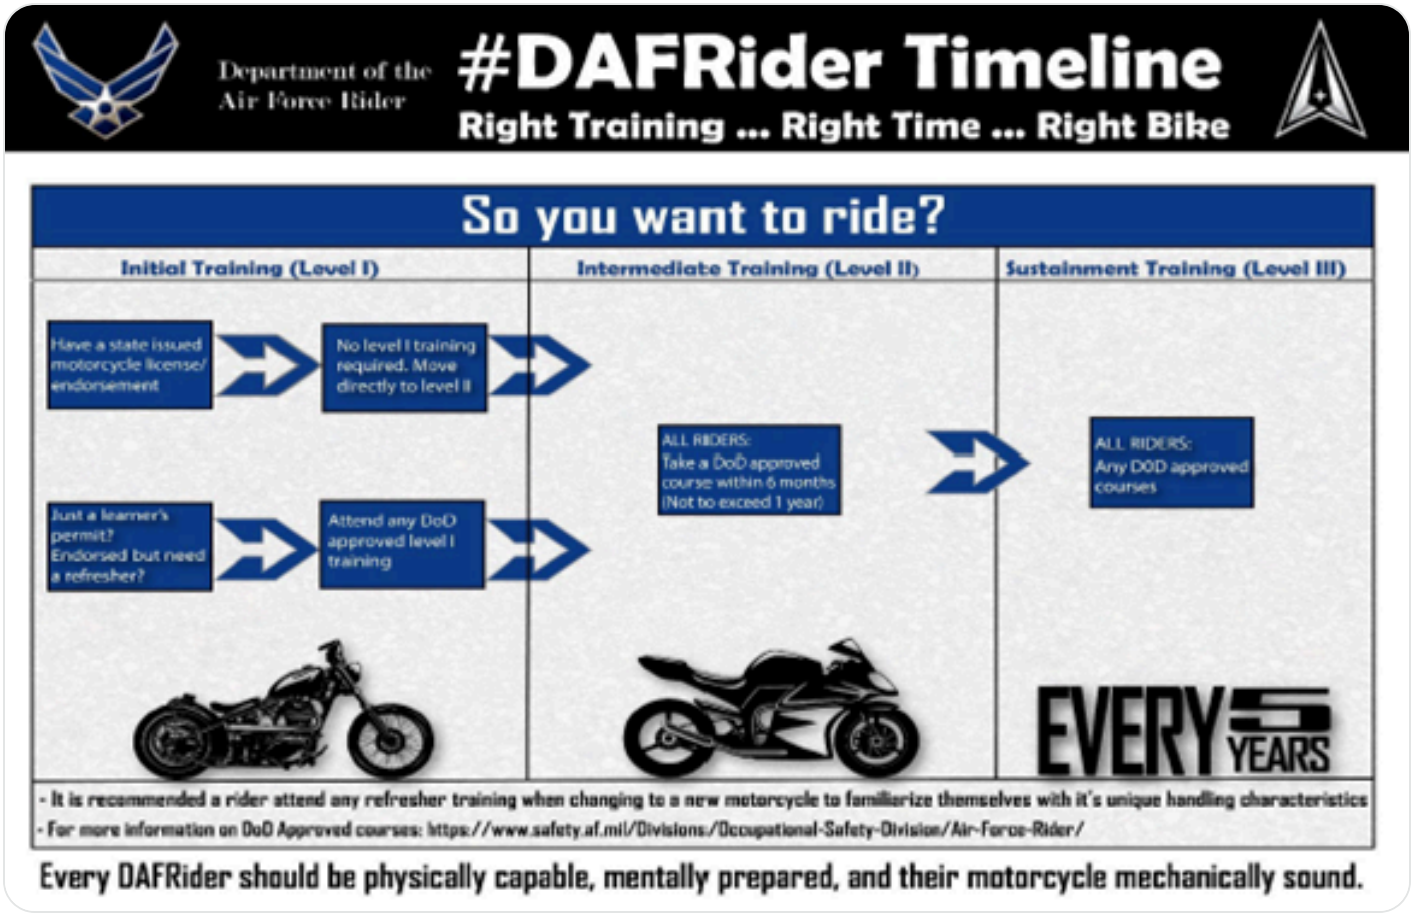

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:
Enter local gate hazards, base-specific traffic concerns, spotter rules, and where vehicle training is documented.

Motorcycle Safety Representatives / Traffic Contacts:
List unit or group motorcycle safety representatives, traffic safety contacts, and local rider briefing requirements.

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

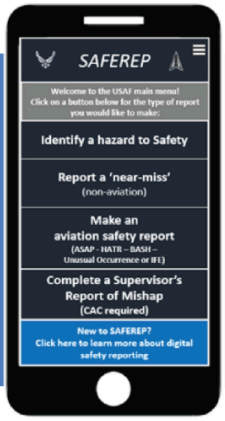

Safety Reporting … All In One Place

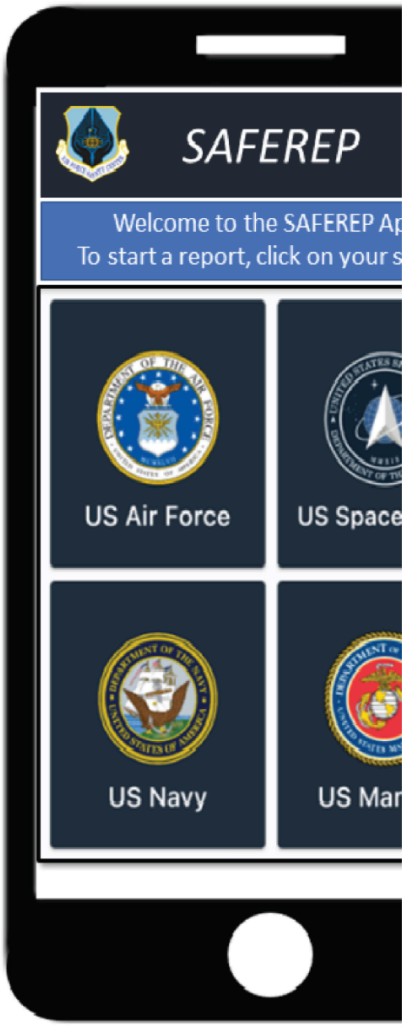

SAFEREP APP!

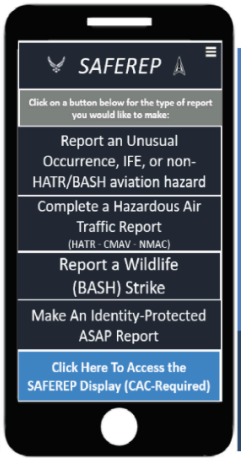

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- "Near miss" events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.
