

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 37 TRW WSA

Work Center: Headquarters Building

Work Area / Office Symbol: HQ

Phone: 671-3967

Supervisor: Jory Carulli, TSgt

Reviewer: Mr. Benavides

Review Date: 2026-09-08

Effective Date: 2026-09-08

Work Center Overview

The 37 TRW WSA performs primarily administrative duties in an office setting, including computer-based work, meetings, records management, telephone and video-teleconference operations, printing/scanning, movement of light office supplies and equipment, and limited use of common office appliances.

Work Area Hazard Analysis / JHA Notes

- Office mishaps generally occur less frequently when compared to the number of mishaps experienced in the industrial environment. However, office workers (An employee who works in an office, especially one engaged in clerical or administrative work.) do experience mishaps and the resulting injuries can be just as painful and just as severe as their industrial counterparts. Stay focused, do not be in a rush or hurry, use the correct equipment, and report any unsafe conditions or processes. Correcting unsafe habits of seasoned employees will help teach new employees proper procedures and processes, this could be a result of complacency. Below are some potential hazards and how you can prevent them. An office environment is usually a low hazard environment, however, there can be hazards e.g. spills, left open drawers, extension cords, clutter, etc. that may increase the risk of a mishap occurring. Please keep your work area/office hazard free.
- Proper Lifting Techniques - Keep a wide base of support. Squat down, bending at the hips and knees only. Keep good posture. Slowly lift by straightening your hips and knees (not your back). Hold the load as close to your body as possible, at the level of your belly button.
- Ergonomics - Change work methods to allow an opportunity to maintain a neutral posture. Use an adjustable workstation to help maintain a neutral posture and change body positions periodically throughout the day.
- Vehicle Operations - Seatbelt usage is mandatory. Follow all road signage to include posted speed limits.
- Crushing Hazards - While we don't have any severe crushing hazards in our workplace, you still need to be cognizant of closing drawers or doors and the potential of hands being caught.
- Weather - Severe weather hazards, such as tornadoes, lightning, hail, flash flooding, and downbursts, can be dangerous. Each requires a basic understanding of what to do so that you can protect yourself. The scale of weather conditions can seem daunting, ranging from high heat with humidity to torrential downpours with possible flooding. However, be prepared by knowing the weather forecast. Prepare for the types of weather hazards that are associated with wherever you are, such as tornadoes, lightning, torrential rains, and high winds. In the event of severe weather, stay away from windows and evacuate to the basement when told to do so.
- Paper Shredders – If using a shredder, keep any loose items e.g. tie, hair etc. away from the blades. Also, when emptying the shredder, unplug the power cord first.
- Fire Hazards – Bldg. 2484 has fire extinguishers. Attempt to fight the fire if possible. Fire Alarm should be activated immediately. Reference Attachment 1 for evacuation maps.

Required Training Topics

Workplace Hazards
Personal Protective Equipment
Emergency Action and Fire Prevention
Reporting Unsafe Equipment, Conditions, or Procedures
Mishap, Occupational Injury, and Illness Reporting
CA-10 and LS-201
DAF Traffic Safety Program
DAFVA 91-209 Location and Content
DAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.

- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control

- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

The following modules apply to this work center and should be reviewed with trainees before task performance.

Active Shooter Response Risk Management Fundamentals Government Vehicle / Utility Vehicle Use Fire Protection and Prevention

- **Active Shooter Response:** Use local emergency response procedures, shelter locations, and mass notification methods applicable to the duty location. Brief personnel on how to recognize an active shooter event, how to summon help, and how to apply local run-hide-fight guidance based on the facility layout. Installation emergency management guidance / local procedures
- **Risk Management Fundamentals:** Use the DAF risk management process to discuss local hazard reporting, supervisor involvement, and integration into routine tasks. Train workers to identify hazards, assess risk, implement controls, supervise the task, and re-evaluate controls during and after operations. DAFI 90-802; DAFPAM 90-803
- **Government Vehicle / Utility Vehicle Use:** Brief operators on unit-specific government vehicle training requirements, local route restrictions, low-speed vehicle rules, and documentation of qualification. Train vehicle operators on seat belts, speed limits, local traffic hazards, spotter use while backing, and restrictions on electronic device use while driving. DAFI 91-207; local procedures

- **Fire Protection and Prevention:** Use the JSTO and local fire prevention plan to brief workers on work-center fire hazards, alarm reporting, extinguisher use, and evacuation accountability. Train personnel on fire hazards, reporting procedures, extinguisher locations, evacuation routes, pull stations, and local emergency response actions. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards; local fire prevention plan

Required Documents

- [CA-10](#)
What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.
- [DAF Form 457](#)
Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or procedures in the workplace.
- [DAFVA 91-209](#) **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations. **Location Posted:** Enter where DAFVA 91-209 is posted for this work center.
- [LS-201](#)
Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** For emergencies dial 911 – inform the operator that you are on Lackland AFB, Randolph AFB, Chapman Annex, Camp Bullis, or Fort Sam Houston.
- **Medical Facility / Treatment:** 1. During normal duty hours on weekdays, personnel are to report to the UCC at WHASC, or the ER at BAMC.
2. Civilian employees may elect to receive treatment from their personal physician.
- **Evacuation / Muster Point:** In case of a building evacuation, the primary assembly point is the Southeast Corner of the Bleachers at the parade field and the alternate assembly point is the

Gateway Club. Gather at these at the appropriate location for accountability and further guidance.
Fire alarm pull stations are at each floor exit.

- **Shelter in Place:** Not entered
- **Active Shooter Response Methods:** Not entered
- **Adverse Weather Shelter:** Not entered

Emergency Evacuation Route Image:

Emergency Equipment and Safety Board

Safety Bulletin Board Location: Not entered

List fire pull stations, extinguishers, power cutoffs, eyewash stations, AEDs, foam systems, and any local fire/emergency equipment notes.

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:

Seat belts

Seat belts are required to be worn on base in military and civilian vehicles so equipped as directed by DAFI 91-207. In addition, child restraint systems or booster seats shall be used as prescribed by the manufacturer. Texas state law requires mandatory use of seat belts by all passengers in any vehicle so equipped off base.

Motorcycles

Motorcyclists on base must have attended a Motorcycle Safety Foundation Course and are required to wear a helmet and PPE as directed by DAFI 91-207. All riders must establish an Air Force Safety Automated System (AFSAS) account and upload all required briefings and training. Contact your unit's Motorcycle Safety Representative for additional information.

Cell Phones

Vehicle operators on an AF installation and operators of government owned, leased, or rented vehicles, on/off an AF installation, shall not use cell phones while the vehicle is in operation, except when using a hands-free device or hands-free operating mode as directed by DAFI 91-207.

Base speed limits

Parking Lots – 10 MPH

Roadways – 30 MPH

Potential Hazards Associated with the Surrounding Local Area

Excessive speeding and driving while impaired

Construction

Stop and go traffic and road construction

Flash flooding

Dense fog

Highway speed limit is typically 65 mph; however, it varies from 55 to 70

Air Force Rider

#DAFRider Timeline

Right Training ... Right Time ... Right Bike

So you want to ride?

Every DAFRider should be physically capable, mentally prepared, and their motorcycle mechanically sound.

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

Safety Reporting ... All In One Place

SAFEREP APP!

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- "Near miss" events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.

Download to your mobile device
