

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 9 Air Support Operations Squadron

Work Center: Command, D-Flight

Work Area / Office Symbol: Bldg. 22038 / CMD/ DFlt

Phone: 254-285-6086

Supervisor: MSgt Frank R. Olszynski

Reviewer: Joshua Stadler

Review Date: 2026-08-13

Effective Date: 2026-08-13

Work Center Overview

The 9th Air Support Operations Squadron (9 ASOS) is a United States Air Force unit located at Fort Hood, Texas. The squadron's mission is to organize, train, equip, and support Tactical Air Control Party (TACP) personnel and associated operations.

Personnel covered by this Job Safety Training Outline (JSTO) include the Command Section, Director of Operations, Command Support Staff, and additional support personnel assigned to D-Flight. D-Flight consists of Resource Management, Intelligence, Cyber, Radio Maintenance, Civil Engineering, Supply, and Vehicle Maintenance personnel.

The work center operates in administrative offices, maintenance and storage facilities, vehicle areas, communications workspaces, and other locations used to support squadron operations. Personnel may also perform duties in field environments, military training areas, and other temporary duty locations.

This JSTO covers the routine and mission-support duties performed by assigned personnel, including administrative support, operational planning, resource management, intelligence support, cybersecurity

and communications activities, radio equipment maintenance, facility support, supply operations, vehicle maintenance, material handling, and general workplace activities. It also addresses the hazards, required safety practices, personal protective equipment, emergency procedures, and risk-control measures associated with these duties.

Work Area Hazard Analysis / JHA Notes

Bioenvironmental Engineering (BE) Survey Notes & Industrial Hygiene Limits

Noise Exposures: BE surveys identify steady-state noise >85 dBA during generator operations and impulse noise >140 dBP in vehicle maintenance/pneumatic tool zones. Annual audiometric testing required for enrolled D-Flight personnel.

Chemical Exposures: Potential chemical hazards include petroleum, oil, and lubricants (POL), aerosol solvents, brake cleaners, and battery electrolyte. Vapor concentrations must remain below OSHA Permissible Exposure Limits (PELs) via mechanical dilution ventilation.

Indoor Air Quality & Ventilation: Battery charging bays must maintain active exhaust systems to prevent hydrogen gas accumulation (>1% concentration limit).

Work Center Special Restrictions

Contact Lenses: Restricted in battery service areas and solvent cleaning zones unless non-vented chemical splash goggles are worn.

Jewelry & Loose Clothing: Rings, watches, neck chains, and loose uniforms are strictly prohibited when operating machinery, working on vehicle engines, or handling MHE.

Chemical Storage: Flammable liquids capped at single-shift quantities outside approved fire safety cabinets. No open flames within 50 feet of fuel or battery charging bays.

Required Training Topics

Workplace Hazards
Personal Protective Equipment
Emergency Action and Fire Prevention
Reporting Unsafe Equipment, Conditions, or Procedures
Mishap, Occupational Injury, and Illness Reporting
CA-10 and LS-201
DAF Traffic Safety Program
DAFVA 91-209 Location and Content
DAFSMS Responsibilities

- **Workplace hazards:** Describe crushing, burn, chemical, ladder, weather, flight line, and noise hazards specific to the work center, plus the technical orders, JHAs, and instructions workers must follow.
- **Personal protective equipment:** Train employees on required PPE, including donning, doffing, cleaning, maintenance, storage, disposal, and reporting contact-lens or medical issues that could affect wear.
- **Emergency action and fire prevention:** Cover alarms, AEDs, extinguishers, evacuation routes, shelter locations, and response procedures tied to the work center.
- **Reporting unsafe conditions:** Instruct personnel to report unsafe equipment, conditions, procedures, and injuries without fear of reprisal, including use of DAF Form 457 and applicable reporting channels.
- **Mishap / injury / illness reporting:** Explain on-duty and off-duty reporting requirements, medical treatment procedures, and emergency response contacts.
- **Traffic safety:** Brief seat belt, speed limit, spotter, electronic device, and motorcycle safety requirements applicable to the work center.
- **DAFVA 91-209 and DAFSMS:** Review the location of DAFVA 91-209 and how workers contribute to the unit safety management system.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively, improvise weapons from your surroundings, and commit fully to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS Framework

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Safety policy provides the structure for a proactive mishap prevention program. Active leadership involvement at every level is critical to implementation and sustained execution.

Risk Management

Integrate risk management into all safety-related activities so hazards are identified early, controls are implemented, and the safety culture stays proactive.

Assurance

Use evaluations, monitoring, and review processes to measure conformance to standards and drive continuous improvement across the mishap prevention program.

Promotion, Education, and Training

Provide safety awareness, embed ongoing training, implement effective controls, and keep airmen and guardians actively engaged in mishap prevention.

Department of the Air Force SMS Framework

Policy and Leadership

- Leadership planning, organization, direction, and control

- Management roles, responsibilities, and relationships
- Procedures and controls that are developed, documented, maintained, and monitored
- Safety and quality balance, integration, and goal setting

Risk Management

- Hazard identification through mission/task analysis and hazard lists
- Hazard assessment using exposure, probability, severity, and risk level
- Control options, effects, prioritization, selection, and decisions
- Implementation, communication, accountability, support, supervision, and feedback

Assurance

- Performance requirements, expectations, and control effectiveness
- Continuous monitoring, self-inspections, internal and external inspections
- Mishap and event investigation, reporting, metrics, and improvement opportunities
- Change management and continuous improvement actions

Promotion, Education, and Training

- Culture built on informed, flexible, learning, just, and reporting behaviors
- Competency through training and education
- Awareness through internal communication, external communication, and information access

Job Specific Training Items

The following modules apply to this work center and should be reviewed with trainees before task performance.

Hearing Conservation
Respiratory Protection Program
Forklift / Material Handling Equipment
Explosives
Safety Training
CPR Training
Fetal Protection Program
Ladder Safety

- **Hearing Conservation:** Ensure workers enrolled in hearing conservation understand noise hazard areas, double-hearing protection requirements, and local follow-up actions tied to occupational health evaluations. Train noise-exposed employees annually on the effects of noise, the purpose of hearing protectors, the advantages and disadvantages of various protectors, and the purpose of audiometric testing. DAFI 48-127; 29 CFR 1910.95 - Occupational noise exposure
- **Respiratory Protection Program:** Document fit testing and occupational health training on AF Form 2767 and ensure wearers understand emergency-use limits, cartridge change-out, cleaning, and medical qualification requirements. Train users before respirator use and at least annually on why the respirator is necessary, how improper fit or maintenance can compromise protection, and how to inspect, don, doff, use, and store the respirator. DAFI 48-137; 29 CFR 1910.134 - Respiratory protection
- **Forklift / Material Handling Equipment:** Use approved lesson plans, hands-on evaluation, and recurring reevaluation before certifying operators. Cover spotter requirements, aircraft proximity rules, and local route restrictions. Train powered industrial truck operators in truck-related and

workplace-related topics, evaluate performance, and conduct refresher training when unsafe operation, incidents, or workplace changes occur. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 35; 29 CFR 1910.178 - Powered industrial trucks

- **Explosives Safety Training:** Provide initial and task-specific explosives safety training using approved lesson plans, local instructions, and quantity-distance / compatibility controls before personnel work with explosives. Use explosives-specific AF lesson plans and local operating instructions. OSHA 2254 includes transportation and explosives references, but the Air Force explosives program should remain the primary training basis for this module. DESR 6055.09_DAFMAN 91-201 - Explosives Safety Standards; DAFI 91-202 - The Department of the Air Force (DAF) Mishap Prevention Program
- **CPR Training:** Ensure designated responders maintain current certification and understand location and use of local AED assets under the unit mishap prevention program. Provide CPR and AED training before assignment where required, and refresh qualification before expiration. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 1
- **Fetal Protection Program:** Use occupational and environmental health guidance to discuss declaration options, exposure review, and local work restriction procedures. Provide job-specific hazard awareness for reproductive health risks where occupational exposures may affect pregnant workers or fetuses. DAFMAN 48-146
- **Ladder Safety:** Provide hands-on ladder safety training at first assignment, including local storage, damaged-tag procedures, and fall prevention expectations. Train workers to inspect ladders before use, maintain three points of contact, set ladders on stable surfaces, and avoid overreaching or using damaged ladders. DAFMAN 91-203 - Air Force Occupational Safety, Fire and Health Standards, Chapter 7

References

The primary overarching publication for all chapters in this JSTO is DAFI 91-203 (Air Force Consolidated Occupational Safety Instruction).

The following primary reference directives, Technical Orders (TOs), AFMANs, and manufacturer guidelines provide detailed, functional safety policy across D-Flight's specific functional areas:

Command, Ops & Office Safety

DAFI 91-203, Chapter 10: Ergonomics and Office Safety.

DAFI 91-203, Chapter 6 & 7: Fire Prevention, Emergency Egress, and Walking-Working Surfaces.

JHA Standard: Air Force Form 4392 (Pre-Task Safety Analysis / Job Hazard Analysis).

Radio Maintenance & Cyber Communications

DAFMAN 17-1301: Computer Security (COMPUSEC).

DAFI 91-203, Chapter 8 & 28: Electrical Safety and Radio Frequency (RF) Radiation/Antenna Systems.

TO 00-33A-1001: General Technical Manual for Ground Electronics Systems Maintenance.

IEEE C95.1 / DoD Instruction 6055.11: Protection Levels for Electromagnetic Field Human Exposure.

Material Handling, Supply & Vehicle Maintenance

DAFMAN 24-306: Operation of Air Force Government Motor Vehicles (GMVs).

AFMAN 24-301: Ground Transportation and Material Handling Equipment Operations.

DAFI 91-203, Chapter 12 & 30: MHE (Forklifts) and Motor Vehicle Operations/Maintenance.

TO 36-1-191: Technical Manual for Motor Vehicle Maintenance and Inspection.

Manufacturer Guidance: Forklift Operator Manuals (e.g., Caterpillar, Hyster, TEREX 10K capacity specifications).

Civil Engineering & Facility Maintenance

DAFI 91-203, Chapters 9, 11, 21, 22: Emergency Eyewash/Showers, Hand/Power Tools, LOTO, and Flammable/Combustible Liquids.

DAFMAN 91-201: Explosive Safety Standards (applies if CE handles site planning or munitions storage facilities).

OSHA 29 CFR Part 1910 - Occupational Safety and Health Standards (General Industry Standards) Subpart S / NFPA 70E: Electrical Safety in the Workplace.

Local Installation Guidance (Fort Cavazos / 9 ASOS)

III Armored Corps & Fort Cavazos Regulation 385-10: Fort Cavazos Safety Program (local range, wildlife, and heat stress/WBGT policies).

9 ASOS Operating Instructions (OIs): Unit-level OIs for vehicle maintenance bay operations, battery charging room procedures, and antenna mast field deployment.

Required Documents

- [CA-10](#)
What a Federal Employee Should Do When Injured at Work. Use this as the workplace reference for employee injury reporting and follow-up actions.
- [DAF Form 457](#)
Hazard Report. Use this form to identify, document, and elevate unsafe conditions, equipment, or procedures in the workplace.
- [DAFVA 91-209](#) **UNITS MUST FILL OUT THEIR OWN LOCATION POSTED**
Department of the Air Force Occupational Safety and Health Program visual aid. Keep this available so personnel know the core safety rights, responsibilities, and reporting expectations.
Location Posted: Enter where DAFVA 91-209 is posted for this work center.
- [LS-201](#)
Notice of Employee's Injury or Death (Non-Appropriated Funds). Use this when applicable for NAF employee injury or death reporting.

Emergency Information

- **Emergency Numbers:** Ambulance 911
Command Post 254-286-6823
93 AGOW Safety DSN 460-9750 Comm 229-257-9750/9749
- **Medical Facility / Treatment:** Carl R. Darnall Regional Medical Center Info Desk: 254-288-8000/8904
Carl R. Darnall Regional Medical Center Appointment Line: 254-288-8888
Russell Collier Health Clinic: 254-553-3146/3147
Patient Advocacy: 254-288-8156
- **Evacuation / Muster Point:** The external rally point for all incidents which require evacuation of the building is the open field directly east of building 22038.
- **Shelter in Place:** Shelter-In-Place location is located in the Mass-Briefing-Room (MBR) located on the first floor of the MBR in the 9 ASOS.

Shelter-In-Place Kit is in the MBR closet.

- **Active Shooter Response Methods:** Quickly determine the most reasonable way to protect your own life. Remember that personnel are likely to follow leaders and people who work in the section during an active shooter situation. Your three options are to Evacuate, Hide out, or Take Action.

Evacuate: If there is an accessible escape path, attempt to evacuate the premises. Be sure to:

- 1) Have an escape route and plan in mind.
- 2) Evacuate regardless of whether others agree to follow.
- 3) Leave your belongings behind.
- 4) Help others escape, if possible.
- 5) Prevent individuals from entering an area where the active shooter may be.
- 6) Keep your hands visible.
- 7) Follow the instructions of any police officers.
- 8) Do not attempt to move wounded people.
- 9) Call 911 when you are safe.

Hide out: If evacuation is not possible, find a place to hide where the active shooter is less likely to find you.

- 1) Your hiding place should:
 - a) Be out of the active shooter's view
 - b) Provide protection if shots are fired in your direction (i.e., an office with a closed and locked door)
 - c) Not trap you or restrict your options for movement.
- 2) To prevent an active shooter from entering your hiding place:
 - a) Lock the door.
 - b) Blockade the door with heavy furniture.
- 3) If the active shooter is nearby:
 - a) Lock the door.
 - b) Silence your cell phone and/or pager.
 - c) Turn off any source of noise (i.e., radios, televisions)
 - d) Hide behind large items (i.e., cabinets, desks)

e) Remain quiet.

4) If evacuation and hiding are not possible:

a) Remain calm.

b) Dial 911 if possible, to alert police to the active shooter's location.

c) If you cannot speak, leave the line open and allow the dispatcher to listen.

Take action against the active shooter: As a last resort, and only when your life is in imminent danger, attempt to disrupt and/or incapacitate the active shooter by:

1) Acting as aggressively as possible against him/her.

2) Throwing items and improvising weapons.

3) Yelling.

4) Committing to your actions, you have the rest of your life to make your actions count.

- **Adverse Weather Shelter:** Severe Weather (Tornado/Flooding/Lightning). Severe weather may occur at any time. Take preventative measures to protect injury to personnel or damage to property, facilities or equipment. During periods of severe weather, such as tornados, lightning, flooding, and high winds, the Fort Cavazos Installation Operations Center (IOC) will provide initial tracking and warning of severe weather. If needed, the Emergency Operations Center (EOC) will be activated as determined by the Garrison Commander or Directorate of Plans Training and Mobilization and Security (DPTMS).

Tornado: Tornadoes are the most violent natural hazard. They are rotating, funnel-shaped clouds formed when cold air meets warm and wet air. They usually form around thunderstorms. Strong winds are the most destructive aspect, with gusts reaching as high as 300 mph. The damaged path can be a mile wide. Tornado season is normally March through August, but tornadoes can occur any time of the year. Tornadoes most often occur at the tail end of a thunderstorm. Eighty percent of tornadoes occur between noon and midnight. While some areas are more prone to tornadoes than others, they can occur anywhere, so it is best to be prepared. When a warning is issued via the Installation Mass Notification System (Giant Voice, Desk Top Alert, Public Address System, and/or Land Mobile Radio) seek inside shelter.

1. Preparedness for a Tornado:

a. Stay informed and know tornado terminology:

i. Tornado watch-Weather conditions are favorable for the development of a tornado.

ii. Tornado warning-A tornado has been spotted. Take shelter immediately.

b. Develop and practice an evacuation or shelter-in-place plan. Ensure all personnel know what to do in case of a tornado.

2. Actions during a Tornado:

a. Shelter in place immediately. Go to a small interior room on the lowest floor and without windows. Shelter in hallways on the lowest floor away from doors and windows, and rooms constructed with reinforced concrete, bricks, or blocks with no windows.

- b. Stay away from outside walls and windows.
- c. Use arms to protect head and neck and remain sheltered until the tornado threat is announced to be over.

Flooding: During the spring rainy season, high winds and prolonged rain can cause flooding in low lying area and may topple trees causing damage to structures and roadblocks. Flooding is the most common natural disaster and can occur anywhere. Flooding can be localized in a particular neighborhood or widespread, affecting entire cities or large portions of states and territories. Floods can develop over a period of days, giving you adequate time to prepare; however, flash floods can develop in a matter of minutes. Flash flood waters can be caused by heavy rain, levee breaches or dam failures. Rushing flood waters can be deeper and stronger than they look. These waters are also destructive and can carry debris, rocks and mud.

1. Flood terminology:

- a. Flood Watch-Flooding is possible. Stay tuned to radio or TV for more information
- b. Flash Flood Watch- Flash-flooding is possible. Stay tuned to radio or TV for more information. Be prepared to move to higher ground
- c. Flood Warning-Flooding is currently occurring or will occur soon. Listen for further instructions. If told to evacuate, do so immediately.
- d. Flash Flood Warning- Flash-flooding is currently occurring or will occur soon. Seek higher ground on foot immediately.

2. Actions during a Flood:

- a. Stay tuned to the radio or TV for further information and instructions.
- b. If you are ordered to evacuate: Take only essential items; unplug electronic equipment; do not walk in moving water; do not drive in flood water; follow the designated evacuation procedure.
- c. If you are NOT ordered to evacuate: Stay tuned to emergency stations on radio or TV for further instructions; Prepare to evacuate to a shelter if your building is damaged.

Lightning: Summer is the peak season for one of the nation's deadliest weather phenomena- lightning. But don't be fooled, lightning strikes year-round.

1. Preparedness for Lightning:

- a. At the ranges or training areas, ensure personnel know where to locate the lightning shelters.
- b. Ensure all personnel know what to do in case of lightning
- c. Actions during Lightning:
- d. Seek shelter immediately
- e. Avoid contact with concrete walls which may contain steel and metal
- f. Stay off the telephone or other communication devices with antennae

Shelter-In-Place. There are several events such as storms, hazardous materials/chemical spills, chemical attack, workplace violence and more that could require action Shelter-In-Place.

Preparedness for Shelter-in-place:

- 1) Assign a primary safety contact for each floor of the building (Building Custodian and Fire Marshal). Duties such as posting door signs and covering windows. vent and doors. and shutting off HY AC systems should be assigned to specific people.

2) Develop an accountability system and a shelter-in-place plan and perform drills. Ensure all personnel know what to do and understand why they are sheltering in place.

3) Fire Marshals/Building Managers will select a room or rooms to serve as shelter room during emergencies. The rooms should be large enough to provide a place to sit for each person sheltered. A windowless room with few vents and doors as possible is best. The shelter room should also have a telephone (either regular or cellular) for emergency use only.

4) Prepare a shelter-in-place kit containing:

- a) Outside door placards (example enclosed)
- b) Plastic sheeting - to fit over any windows or vents in the sheltering area.
- c) Duct tape - to secure the plastic over windows/vents and to seal doors.
- d) Battery operated radio with fresh batteries
- e) Flashlight and fresh batteries
- f) Bottled water for drinking (optional)
- g) First aid kit

Actions during Shelter-in-place

1) When you are warned of an emergency: "SHELTER-IN-PLACE! SHELTER-IN-PLACE! SHELTER-IN-PLACE!" Warning can come via voice, desktop alert, the mass notification warning system, post PA system, all weather radio, TV, or radio messaging system.

2) Stay in your office and close/lock windows and doors (severe weather). Move to an interior room (tornado warning).

3) Post "SHELTER-IN-PLACE IN EFFECT - NO ENTRY" signs on all entrances identifying POC, phone number and location of safe room. Move personnel to preidentified safe room and take necessary actions (securing hazardous materials and chemicals)

4) Turn off all air handling equipment if appropriate (heating, ventilation, and/or air conditioning). Do not leave until you are given the all clear by the police department or those in authority.

5) If needed, seal any windows and/or vents with sheets of plastic and duct tape.

6) If needed, seal the door(s) with duct tape around the top, bottom and sides.

7) When the "all clear" is announced, open windows and doors, turn on ventilation systems and go outside until the air in the building has been exchanged with clean outdoor air if there has been a HAZMAT incident.

Emergency Evacuation Route Image:

Fire Evacuation Plan

LEAVE THROUGH THE FRONT DOOR AND MEET AT THE ARCHERY RANGE ACROSS THE STREET

Emergency Equipment and Safety Board

Safety Bulletin Board Location: Safety Bulletin Board are in the following buildings and areas:

22038 - 9 ASOS - two are upstairs in the main hallway, one downstairs in main hallway.

22026 - Hazmat storage building - NO PERSONNEL PRESENT

22025 - Martial Arts and Combative Gym - Main hallway

22021 - Human Performance Optimization - Main hallway, right of the water fountain.

22019 - Human Performance Optimization Staff Building - Main meeting area

List fire pull stations, extinguishers, power cutoffs, eyewash stations, AEDs, foam systems, and any local fire/emergency equipment notes.

No emergency equipment maps or location photos uploaded.

Traffic Safety Program

DAF Traffic Safety Program (DAFI 91-207): Train personnel on mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, vehicle training requirements, and restrictions on electronic device use while operating vehicles on- or off-base.

Seat Belts / Occupant Restraints: All persons operating or riding in motor vehicles must wear installed restraint systems as prescribed by the manufacturer. Drivers are responsible for ensuring all passengers are briefed on and use required restraints.

Motorcycle / ATV Training: Personnel must complete required safety training before riding a motorcycle, and local units should address required PPE, licensing, refresher training, and safety representative contacts.

Pedestrian / Bicycle Awareness: Emphasize local roadway crossing hazards, visibility requirements, spotter use, and other pedestrian or bicycle precautions specific to the installation.

Local Traffic Hazards / Vehicle Notes:

Enter local gate hazards, base-specific traffic concerns, spotter rules, and where vehicle training is documented.

Motorcycle Safety Representatives / Traffic Contacts:

List unit or group motorcycle safety representatives, traffic safety contacts, and local rider briefing requirements.

Department of the
Air Force Rider

#DAFRider Timeline

Right Training ... Right Time ... Right Bike

So you want to ride?

Every DAFRider should be physically capable, mentally prepared, and their motorcycle mechanically sound.

No routine-use GVO risk assessment files uploaded.

Reporting Unsafe Equipment, Conditions, or Procedures

Notify the supervisor immediately when unsafe equipment, conditions, or procedures are identified. Personnel may report hazards without fear of retaliation, coercion, discrimination, or reprisal.

- **DAF Form 457:** Use to document and elevate unsafe conditions, equipment, or processes.
- **SAFEREP:** Use the approved mishap or hazard reporting channel for additional reporting when directed by local procedures.

Safety Reporting ... All In One Place

SAFEREP APP!

Why Safety Reporting?

Quickly and easily tell safety about safety issues you see

- In the dorms
- At work
- Anywhere on base
- In flight
- While maintaining aircraft
- On the ramp

What to report?

- Dangerous conditions
- “Near miss” events
- Aviation specific reporting
- Cultural issues that could lead to an accident, damage, or injury
- Supervisor mishap report

Report anonymously
Reports go direct to the safety office

New name, new website, new app, and a whole new look

SAFEREP is a web- and app-based way for members from every career field to identify hazards and report near-misses and even some mishaps directly to their safety offices using any computer or mobile device.
