

Job Safety Training Outline

Built to align with DAFI 91-202 paragraph 14.1 requirements.

Unit: 87 ABW

Work Center: McGurie SE

Office Symbol: SE/G/W

Supervisor: Holloway, Kenneth

Phone: Holloway, Kenneth

Reviewer: Holloway, Kenneth

Review Date: 2026-05-15

Effective Date: 2026-05-15

WORK CENTER OVERVIEW

Wing occupational and weapons safety for 87th Air Base Wing, 305th Air Mobility Wing, and numerous mission partners on Joint Base McGuire-Dix-Lakehurst, NJ.

Mission:

(ABW) Warfighters Supporting Warfighters

(SE) Facilitate Mishap Prevention

Vision:

(ABW) America's Premier Joint Warfighting Base.

(SE) Superior warfighter support

Priorities:

People: Care for our Warriors and Families

Mission: Execute our Mission with Pride... Ready to Fight!

Partnerships: Strengthen Strategic Partnerships that Enhance Mission Execution

REQUIRED TRAINING TOPICS

Workplace Hazards

Personal Protective Equipment

Emergency Action and Fire Prevention

Reporting Unsafe Conditions

- **Hazards and controls:** Address task hazards, environmental hazards, governing instructions, and hierarchy of controls including elimination, engineering, substitution, and administrative controls.
- **PPE:** Cover required protective equipment, wear/use procedures, cleaning, maintenance, storage, disposal, and supervisor notification concerns.
- **Emergency response:** Cover emergency action, fire prevention, alarms, AEDs, extinguishers, evacuation, shelter, active shooter response, and emergency contact procedures.
- **Reporting:** Explain unsafe condition reporting, injury/illness reporting, DAF Form 457, SAFEREP access, and anti-retaliation protections.
- **Program awareness:** Include CA-10 / LS-201 location, traffic safety program requirements, DAFVA 91-209 location, and DAFSMS responsibilities.

Hierarchy of Controls

Apply these controls from most effective to least effective when reducing workplace hazards under DAFI 91-202 paragraph 14.1.2.1.4.

Use the highest level of control feasible first. PPE should protect workers only after elimination, substitution, engineering, and administrative controls have been considered.

Active Shooter Response

In the event of an active shooter, individuals should employ the **Avoid, Deny, Defend** response method. This strategy is adaptable to the specific situation and environment.

Responses to an Active Shooter include:

Avoid (RUN),

Deny (HIDE),

Defend (FIGHT)

Adapt your response to the weapons used:

Ricocheting bullets

Shrapnel and secondary missiles

Cover vs Concealment

An active shooter situation may be over within 15 minutes, before law enforcement arrives.

Avoid (Run): The first and preferred course of action is to evacuate the area if a safe route is available. Maintain awareness of your surroundings and have an escape route planned. Leave your belongings, evacuate regardless of whether others follow, and do not attempt to move wounded people. Once you have reached a safe location, call 911 and provide any information you have.

Deny (Hide): If you cannot evacuate, your next priority is to deny the attacker access to your location. This involves more than just hiding; it means securing your position. Lock and blockade doors with heavy furniture, turn off lights, silence your phone, and remain out of the shooter's view. Remember that concealment only hides you, while cover can offer protection from bullets.

Defend (Fight): As a last resort, when your life is in immediate danger, you must be prepared to defend yourself. Act aggressively and take action against the shooter. Improvise weapons from your surroundings and commit to your actions. Taking action may be risky, but it could be your best or only chance for survival.

When law enforcement arrives: Remain calm, follow all instructions, keep your hands visible with fingers spread, and be prepared to provide information about the shooter's location, number, and description.

DAFSMS FRAMEWORK

DAFSMS uses four pillars and the DAFSMS framework to structure the mishap prevention program through continuous improvement and the Plan-Do-Check-Act model.

Policy and Leadership

Provides the structure for a proactive mishap prevention program through policy, active leadership engagement, and clearly defined responsibilities at every level.

Risk Management

Integrates hazard identification, assessment, and control decisions into daily operations to reduce mishaps and strengthen safety culture.

Assurance

Uses evaluations, monitoring, reviews, and data to confirm the mishap prevention program is implemented and improving over time.

Promotion, Education, and Training

Ensures Airmen and Guardians receive safety awareness information, embedded training, effective risk controls, and active engagement in mishap prevention.

1. Purpose. DAFSMS utilizes the four pillars and the DAFSMS framework to structure the mishap prevention program. Activities associated with each pillar set policy, identify and mitigate hazards and risk, and reduce the occurrence and cost of injuries, illnesses, fatalities, and property damage through continuous improvement and the PDCA model.

2. Policy and Leadership. Safety policy provides the structure for a sound and proactive mishap prevention program. Active leadership involvement in implementation and execution is critical at all levels of command.

3. Risk Management. Ensure the RM process is fully integrated into all safety-related activities to enhance mishap prevention and sustain a proactive safety culture. Refer to DAFI 90-802 and DAFPAM 90-803 for additional detail.

4. Assurance. Safety assurance is how commanders determine whether mishap prevention elements are implemented and guides continuous improvement through evaluation, monitoring, and review.

5. Promotion, Education, and Training. Ensure Airmen and Guardians are provided safety awareness information, organizations have embedded ongoing training into the mishap prevention program, effective risk controls are implemented, and personnel remain actively engaged.

Report it on SAFEREP

HAZARDS ARE EVERYWHERE.

WHAT ARE **YOU** DOING TO
PREVENT INJURY OR DEATH?

More info about SAFEREP
www.safety.af.mil/home/saferep

SAFEREP is the Department of the Air Force's (DAF) premiere digital safety reporting tool and mobile app. It allows Airmen and Guardians to easily report hazardous conditions, near-misses, unintentional errors, or safety concerns across all disciplines, including workplace, traffic, industrial, flight, weapons, and space safety, directly from their devices anytime and anywhere.

Fully integrated with the Air Force Safety Automated System (AFSAS), it replaces the earlier Airman Safety App and serves as the DAF's only fully digital safety reporting avenue. Users simply answer a short series of questions to submit reports that reach the appropriate Major Command (MAJCOM) safety office quickly and efficiently.

Key Benefits for Job Safety Training:

- **Empowers everyone:** Turns every Airman or Guardian into a proactive sensor for hazard identification, encouraging a strong safety culture where people feel comfortable speaking up without barriers like paperwork or word-of-mouth delays.
- **Prevents mishaps:** Enables early mitigation of risks before they lead to incidents, capturing minor events and near-misses that offer the greatest prevention potential.
- **Simple and accessible:** Mobile-first design makes reporting fast, more efficient than traditional methods, and available on the spot through the app on Google Play and the Apple App Store.
- **Broad coverage and integration:** Supports multiple safety areas and includes specialized features such as Aviation Safety Action Program reporting, improving visibility, tracking, and overall risk management across the force.

This tool strengthens operational readiness by fostering a proactive, data-driven approach to safety. You can download it from the app stores or access it through the official SAFEREP site for more details.

SAFEREP portal: <https://saferep.safety.af.mil>

Learn more: <https://www.safety.af.mil/Home/SAFEREP/>

REPORTING UNSAFE EQUIPMENT, CONDITIONS, OR PROCEDURES

Employees must report unsafe equipment, conditions, or procedures to their supervisor immediately. This includes any hazard that could injure personnel, damage equipment, or create an unsafe work process.

Personnel must also be notified that unsafe conditions, work-related injuries, and illnesses may be reported **without fear of retaliation**. Immediate supervisor involvement remains the primary reporting path, with SAFEREP and formal hazard-report channels available when needed.

What To Report

- Unsafe equipment that is broken, damaged, unserviceable, or missing required guards or controls.
- Unsafe conditions or procedures that create a hazard to personnel, operations, or facilities.
- Work-related injuries, illnesses, near-misses, and hazards needing immediate attention.

Immediate Actions

- Notify the supervisor or responsible area lead immediately.
- If the hazard can be safely controlled, stop use and isolate the equipment or area until corrected.
- If the danger is imminent to life or health, evacuate the area and activate emergency response procedures.

Tag use examples: Use the appropriate danger, caution, out-of-order, or do-not-start tag to keep unsafe equipment out of service until the hazard has been corrected and the responsible supervisor authorizes return to use.

Escalation: If the issue cannot be resolved at the lowest level, elevate it through the unit safety representative, DAF Form 457 process, or SAFEREP as appropriate.

USE OF PORTABLE FIRE EXTINGUISHERS

Portable fire extinguishers are intended for small, incipient-stage fires only. Personnel should use an extinguisher only when they have been trained, the fire is small and contained, the correct extinguisher is available, and there is a clear evacuation path behind them.

Use the **PASS** method when operating a portable fire extinguisher: **Pull** the pin, **Aim** at the base of the fire, **Squeeze** the handle, and **Sweep** side to side.

If the fire grows, smoke conditions worsen, or the extinguisher does not control the fire immediately, evacuate the area, activate the local emergency response process, and report the incident to emergency services and supervision.

WORK AREA HAZARD ANALYSIS

Daily operations may take safety personnel to various locations which contain hazards with little or no time to return to the office to collect appropriate PPE. PPE must be taken with the employee and used

when necessary, when conducting work outside the office.

- Foot hazards: PPE issued: Safety/steel-toe footwear
- Head hazards: PPE issued: Hard hat. Clean with mild soap and water.
- Hearing hazards: Personnel are not on a hearing conservation program but may enter areas where loud noise is present. Hearing protection (hard shell and disposable-type are provided in the work center. Clean hard shell earmuffs with mild soap and water.
- Hand hazards: PPE Issued: leather, nitrile, or mechanics-style gloves. Dispose of nitrile gloves in approved trash containers.
- Eye hazards: PPE issued: ANSI Z87.1 glasses. Clean with eye glass wipes. If contaminated with hazardous chemicals, dispose of them in approved containers and obtain a new pair from the supervisor.
- Nighttime/Reduced visibility traffic exposure: PPE Issued: Reflective vest and/or belt. Reflective vest or belt will be worn over the outer most garment when the employee is exposed to a traffic environment (i.e. roadways, flightline, etc.) during hours of darkness or reduced visibility.

RISK MANAGEMENT FUNDAMENTALS

Reference: DAFSMS and local RM program guidance.

Address hazard identification, control selection, local escalation expectations, and when RM refresher training must be completed for this work center.

Risk Management (RM) Fundamentals will be completed on the DAF enterprise learning system.

RM Annual Refresher Training (ART) will be completed in-person IAW DAFI 90-802_AMCSUP, RiskManagement.

JOB SPECIFIC TRAINING ITEMS

Manual Lifting and Material Handling

Slips, Trips, Falls

Bloodborne Pathogens

Airfield Driving

Unexploded Ordnance

Tick-borne Illness

Ergonomics / Office and Administrative Workstation Safety

- **Manual Lifting and Material Handling:** Back injuries are a significant cause of disability, with 75% of workplace-related back injuries occurring during lifting tasks. Following these guidelines can help minimize the risk of strains, sprains, fractures, and other injuries. Preparing for the Lift. Before you even touch the object, it is crucial to plan ahead. - Assess the Load. Test the weight of the object to ensure it is manageable. If it is too heavy or bulky, get assistance from a coworker or use mechanical aids like a dolly or hand truck. - Clear Your Path. Ensure the route you will take is free of obstacles, debris, and is not slippery. Know where you will place the object before you lift it. - Warm-Up. Just like any other physical activity, it is important to warm up your muscles before lifting. Simple stretches for your back and legs can help prevent injuries. Proper Lifting Technique. The way you lift an object is critical to protecting your back and preventing injury. The goal is to use your legs, not your back. - Get Close to the Load. Stand as close to the object as possible. The closer the load is to your spine, the less force it exerts on your back. - Maintain a Stable Stance. Keep your feet shoulder-width apart, with one foot slightly in front of the other for better balance. - Bend at Your Knees and Hips. Squat down by bending your hips and knees, keeping your back straight. Avoid bending forward. - Keep Your Back Straight. Maintain the natural curve of your lower back. Look straight ahead and keep your shoulders back. - Grip the Load Securely. Get a firm grip on the object before lifting. - Lift with Your Legs. Straighten your legs to lift the object, keeping your back straight. Avoid jerking or snatching the load. - Keep the Load Close. Hold the object close to your body, at about waist level. Carrying and Setting Down the Load. The process of carrying and setting down the object is just as important as the lift itself. - Avoid Twisting. Use your feet to change direction, taking small steps. Do not twist your body

while holding a heavy object. - Maintain Clear Vision. Make sure you can see over or around the load you are carrying. - Set Down Safely. To set the object down, reverse the lifting process. Squat down by bending your knees and hips, keeping the load close to your body and your back straight. When to Use Mechanical Aids. For heavy, bulky lifting tasks, always consider using hand trucks. By following these ergonomic principles, you can significantly reduce your risk of injury when lifting and moving objects. Remember, no single technique is perfect for every situation, so it is important to adapt these principles to the specific task at hand.

Link to training: <https://afcec.redvector.com/>

- **Slips, Trips, Falls:** Water may puddle around doors and walking surfaces during periods of heavy rainfall. This often causes the tile just inside the building doors to become wet. - Do use handrails. - Do watch where you are walking. - Do use extreme caution when entering and exiting the building. The wet tiles cause your boots to be slippery when you step onto the floor at once inside the building. - Do not carry items stacked above eye level up or down stairs. - Do not read or text while going up or down stairs. - If wearing cleats in the winter remove them upon entering buildings.
- **Bloodborne Pathogens:** Your job does not typically require you to handle contaminated materials. If you are exposed to another person's blood or other bodily substances, immediately clean the affected body part(s) with warm soapy water, let your supervisor know and report to the occupational medicine clinic at the 87 MDG.
- **Airfield Driving:** The airfield/flightline is a hazardous environment. DO NOT operate any vehicle on the airfield/flightline unless you are licensed to do so. Always wear your reflective vest/belt when on the airfield/flightline in reduced visibility. Be mindful of vehicles and aircraft movement. Aircraft have the right-of-way.
- **Unexploded Ordnance:** The Dix ranges have been in use for one hundred years. There are UXOs on the ranges and on some areas of Lakehurst. DO NOT go down range on any range without first checking in with Range Control. RECOGNIZE, RETREAT, REPORT. Recognize the potential UXO, Retreat to a safe location, and Report it to SFS.
- **Tick-borne Illness:** New Jersey has an abundance of ticks and they can be found outdoors and indoors. Deer ticks may carry Lyme Disease. If you are bitten by a tick at work, first carefully remove the tick being careful not to break its jaws off as you remove it. Keep the tick and notify your supervisor. You can take the tick to the public health clinic at the 87 MDG where they may be able to test the tick for Lyme Disease. Keep an eye on the bite site for several days. If you see a rash or bulls-eye shaped mark notify your doctor and your supervisor. Alpha-gal syndrome is a food allergy to red meat and other products made from mammals. A Lone Star tick bite can transmit a sugar molecule called alpha-gal into the person's body. This can trigger an immune system reaction that produces mild to severe allergic reactions to red meat.
- **Ergonomics / Office and Administrative Workstation Safety:** Complete the Office Safety course (RVCT-1070) on RedVector. Course Description: While we most often associate workplace injuries with construction, mining, manufacturing, and other manual labor jobs, injuries can occur even if you spend most of your workday sitting at a desk. Therefore, recognizing common hazards in an office environment and knowing how to reduce risks is vital to creating a safer workplace. This course discusses the common hazards in an office environment and how to reduce risks in order to help create a safer workplace. Learning Objective: List some of the most common hazards and injuries in offices • Identify measures to prevent slips, trips, and falls • List ergonomic risk factors associated with office work and describe how to reduce the risk of musculoskeletal discomfort • Describe proper lifting technique • Describe how to prevent office fires • Describe the purpose and content of an emergency action plan

Link to training: <https://afcec.redvector.com/>

Ergonomics Workstation Posture Guide:

Use this guide while briefing office and administrative workstation setup.

DAF TRAFFIC SAFETY PROGRAM

Reference: DAFI 91-207. Requirements of the DAF traffic safety program include mandatory use of seat belts and helmets, speed limits, local traffic hazards, spotters while backing, and vehicle training requirements.

Additionally, brief prohibition or restrictions on electronic-device use while operating vehicles on- or off-base, and discuss motorcycle safety training requirements before riding a motorcycle.

On-Base / Vehicle Operations

- Obey posted speed limits, traffic control devices, and local roadway rules.
- Use installed seat belts and occupant restraints as designed by the manufacturer.
- Use spotters while backing when required by local policy, task conditions, or vehicle type.
- Complete required GOV, GVO, golf cart, low-speed vehicle, or mission-specific vehicle training before operation.

Electronic Devices / Headphones

- Do not use non-hands-free electronic devices while operating a motor vehicle.
- Stop in a safe location before using a phone if hands-free operation is not available.
- Do not wear headphones or listening devices in ways that interfere with hearing traffic, alarms, or emergency warnings.

Motorcycle / ATV Safety

- Complete required motorcycle rider training before riding on a roadway.
- Wear required PPE including helmet, eye protection, gloves, protective clothing, and over-the-ankle footwear.
- Carry proof of required training when applicable and comply with state licensing requirements.

Pedestrian / Bicycle Awareness

- Use caution at crossings, follow traffic controls, and wear visibility gear when exposed to roadway hazards.
- Use required lighting and reflective equipment during darkness, reduced visibility, or inclement weather.

Department of the
Air Force Rider

#DAFRider Timeline

Right Training ... Right Time ... Right Bike

So you want to ride?

Every DAFRider should be physically capable, mentally prepared, and their motorcycle mechanically sound.

Local Traffic Hazards / Vehicle Notes:

JBMDL Speed limit if not otherwise posted = 25mph. Do not speed. Obey the rules of the road when responding to a mishap. Remember you are NOT a first responder and must obey all traffic rules and regulations.

Vehicle operators should pay their full attention to the operation of the vehicle. All drivers must follow applicable federal, state, local and host nation laws that are more stringent than this guidance on distractions while driving (e.g., using cellular phones, text messaging).

On base all traffic circles are one lane. Traffic entering the circle must yield to traffic in the circle. When exiting the circle use your turn signals.

Jug-handles are used extensively off base but not on base. No two jug-handles are the same. Be alert for other drivers who may cut you off trying to make their turn. If you miss your turn at a jughandle do not cut off other drivers. Instead, continue down the road until you can safely go back.

You can expect seasonal heavy fog, typically in Autumn. Reduce driving speeds and use your headlights.

New Jersey "Wipers On, Headlights On" Law

In New Jersey, you must have your headlights on whenever your windshield wipers are in use, regardless of whether it is day or night, and regardless of the amount of precipitation.

When Headlights Are Required

- 1) From half an hour after sunset to half an hour before sunrise — even in clear weather.
- 2) Whenever you use your windshield wipers — this includes light drizzle, rain, snow, mist, or any other moisture that triggers wiper use.
- 3) When visibility drops below 500 feet due to fog, smoke, or other adverse conditions.

Passing on the Right in New Jersey. In New Jersey, passing on the right is generally prohibited unless specific safety conditions are met.

Passing on the Right is Permitted, only if:

- 1) The vehicle ahead is making or about to make a left turn and there is enough unobstructed pavement to do so safely.
- 2) The roadway has two or more substantially continuous lines of traffic moving in the same direction, allowing a lane change to the right.
- 3) On one-way streets, if the road is wide enough for two or more lines of traffic and free of obstructions.
- 4) In all these cases, you must pass at a safe distance to the left and not drive off the pavement or main-traveled portion of the road to complete the maneuver.

Passing on the right is illegal in most other situations, including:

- 1) When there is only one lane of traffic in the same direction.
- 2) When the vehicle ahead is not making a left turn.
- 3) When it is not safe to pass (e.g., hills, curves, intersections, railroad crossings, narrow bridges, or "No Passing" zones).
- 4) Anywhere on JBMDL unless the roadway has a left turn lane allowing the right lane to continue moving.

Motorcycle Safety Representatives / Traffic Contacts:

Mr. Holloway, 754-3899

Mr. Seawright, 323-4774

Mr. Lizaire, 323-2175

No GVO risk assessment files uploaded.

EMERGENCY INFORMATION

- **Emergency Numbers:**

911: Calling from a government landline give: name, bldg. #, and nature of emergency.

NOTE: 911 from cell phones ring to Burlington County Dispatch, tell them you are on JBMDL and they will transfer you to 87 SFS.

- **Medical Facility / Treatment:**

The JB MDL Clinic does not provide emergency services. For any severe or life threatening injury call 911 for an ambulance.

Non-emergency:

- 1) During normal duty hours on weekdays (0800-1600), personnel should report to JB MDL Occupational Medicine Clinic (McGuire) for assessment and treatment of non-emergency injuries suffered while on-the-job. Civilian employees may elect to receive treatment from their personal physician.
- 2) If injuries are non-life threatening injuries, or injuries suffered during other than normal duty hours, go to the emergency room at Deborah (Browns Mills).

Emergency Medical Facilities.

- 1) Deborah Heart and Lung Center; 20 Pine Mill Road, Brown Mills, NJ 08015 (609) 283-9019.

- **Evacuation / Muster Point:**

Bldg 1829

Primary: Far side of the front parking lot near the street

Alternate: Bldg. 1835 parking lot.

- **Shelter in Place:**

Bldg 1829: Men's locker room, 2nd floor immediately outside the SE office.

- **Active Shooter Response Methods:**

Run/Hide/Fight (See Active Shooter section)

- **Adverse Weather Shelter:**

New Jersey tornadoes are rare, but possible. In the event of a tornado warning seek shelter in an interior room on the lowest floor. If in a vehicle, park and exit the vehicle. Seek shelter in the lowest place available.

Lighting: Seek shelter indoors or inside and enclosed vehicle.

High temperatures during summer months. Drink plenty of fluids. Be aware of symptoms of heat exhaustion: skin is clammy and moist, fatigue, giddiness, nausea, and headache. If you or a coworker experience any of these symptoms the victim should rest in a cool place and drink water or an electrolyte solution.

Heat stroke: body stops sweating, mental confusion, delirium, loss of consciousness, convulsions or coma, body temp of 106 degrees or higher, hot dry skin which may be red, mottled, or bluish. Seek medical attention at once.

During the winter months it can get quite cold and you should always wear the proper clothes. It is your responsibility to ensure you have the right foul weather gear at work.

South New Jersey has a very large pine forest. There is a year-round fire danger. If you smoke, be very mindful of where you smoke and how you dispose of your smoking materials.

Emergency Evacuation Route:

EMERGENCY EQUIPMENT AND SAFETY BOARD

Safety Bulletin Board Location: The safety, emergency management, and antiterrorism bulletin boards are virtual and located on MS Teams (87 CPTS and WSA Bulletin Board). You will be added to the team when in-processing the unit safety rep.

Fire extinguishers located throughout the facility. The closest extinguisher to the Safety Office is in the hallway by the stairwell. Fire alarm pull stations are located at each exit.

No emergency equipment maps or photos uploaded.

DOCUMENTATION AND REVIEW

Job safety training is annotated on the DAF Form 55, Employee Safety Record. Signatures are not required unless required by other guidance/directives.

No DAF Form 1118 files uploaded.

No Bioenvironmental Workplace Survey uploaded.

Annual Review History:
Each annual review entry is shown in the table below.
